CHOOSE THE NEXT STEP

Flowchart

Decisions made clear

Follow one activity at a time. Each question shows the next action and what happens when a check fails.

Start with the contents page. Choose a topic, follow its explanation, and check the result.

Add or revise a Softcopy or External Document directly 6

Prepare a Softcopy or External Document request 7

Save and submit a request 8

Approve an assigned request 9

Return or reject a request 10

Request approval to transfer a Hardcopy 11

Dispatch and accept the physical document 12

Request personal access or document assignment 13

Dispose of a document directly 14

Request Hardcopy or External Document disposal 15

Assign documents directly 16

Maintain places and category folders 17

Create, update or deactivate a user account 18

Maintain roles and permissions 19

Publish an approval route 20

Respond to task and retention notices 21

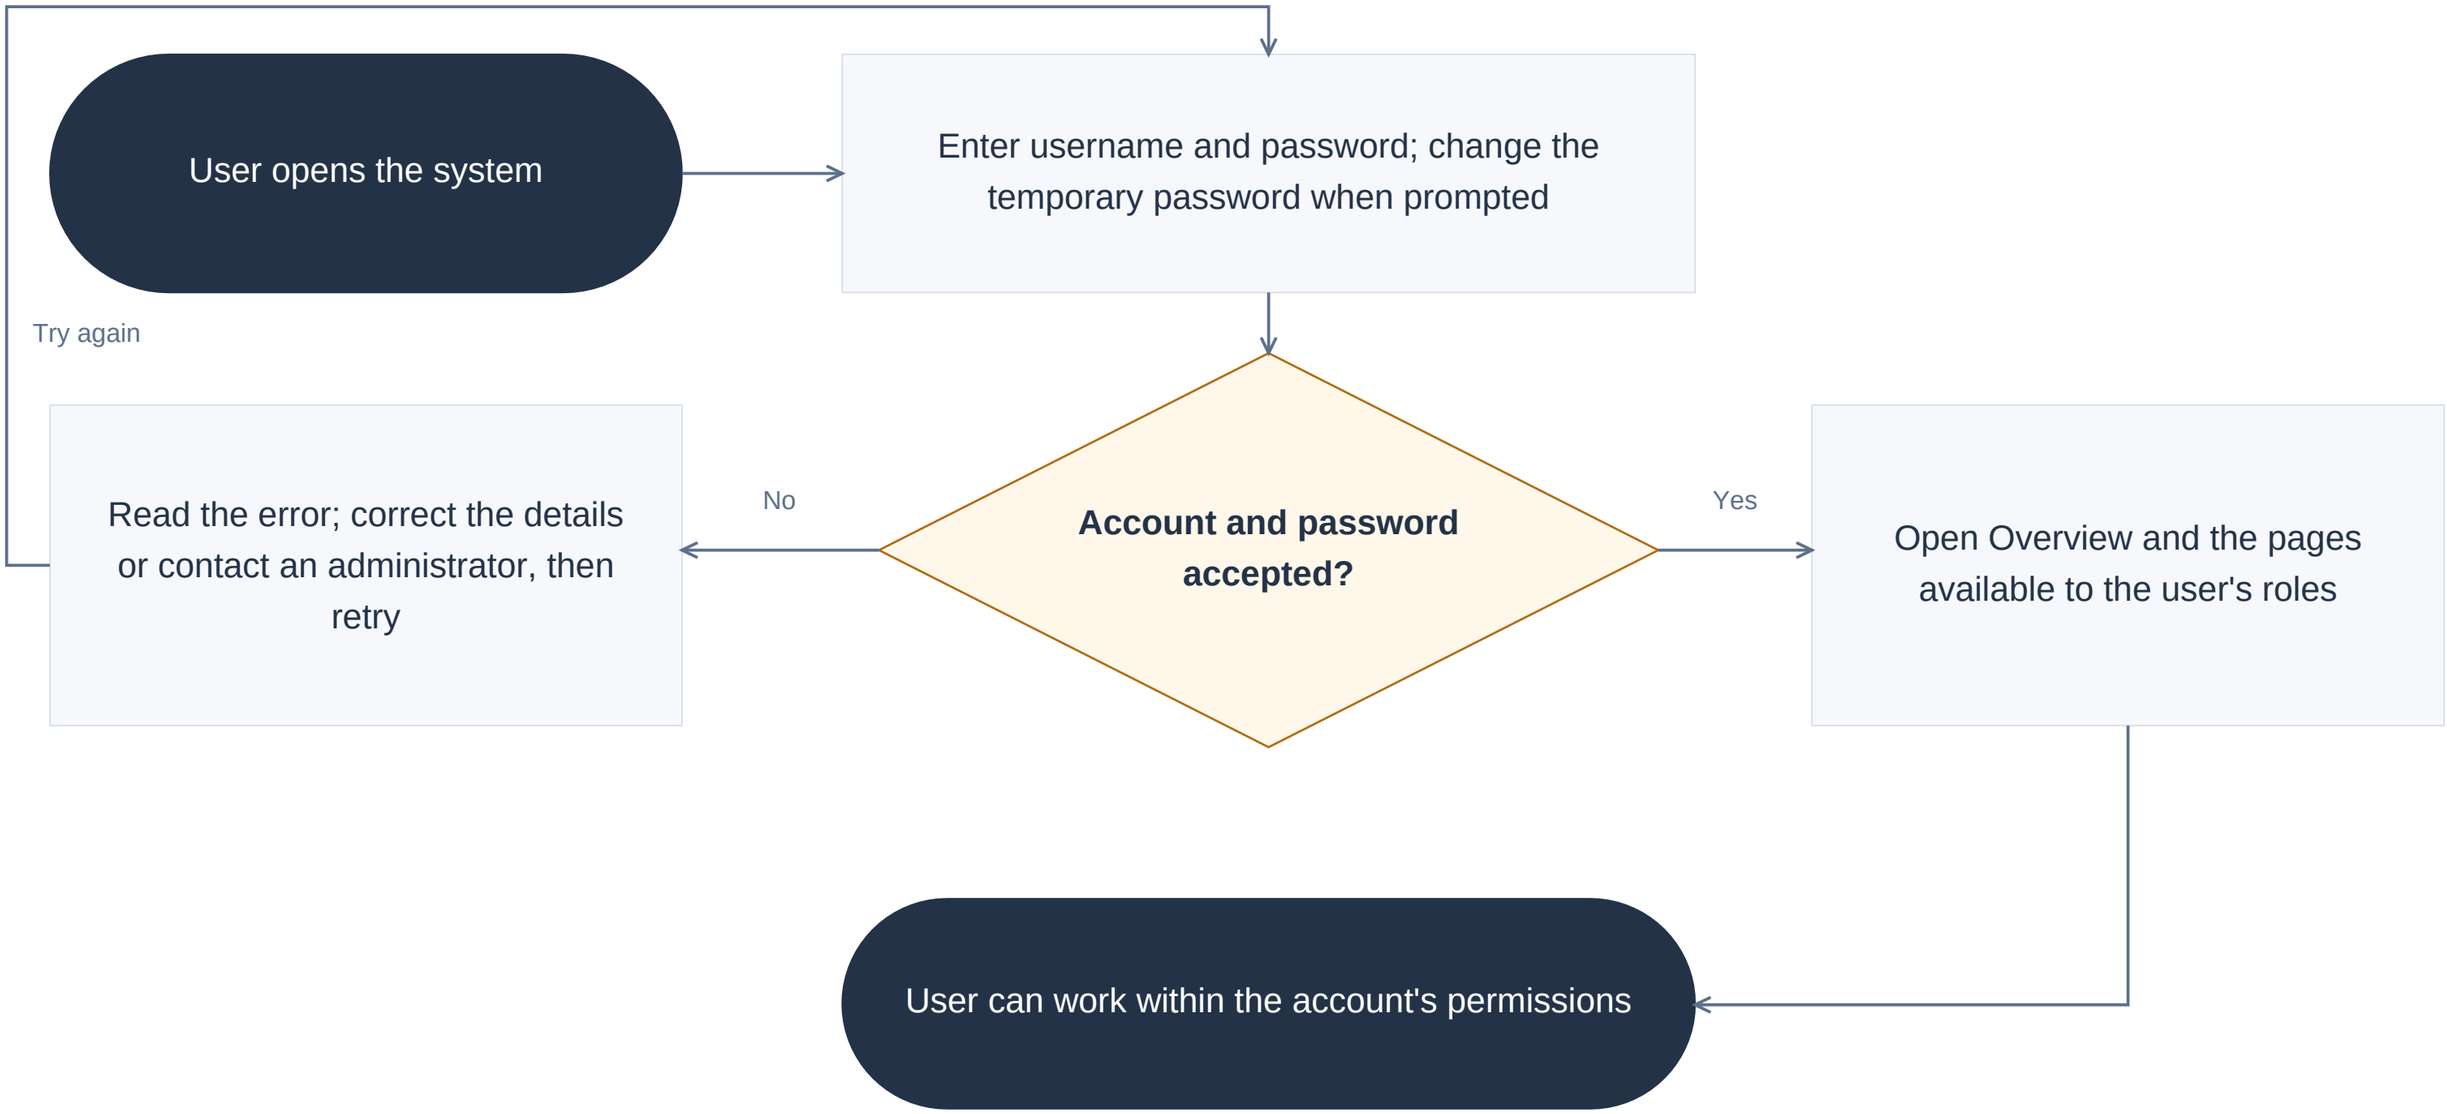

Review the Internal Audit Trail 22

Create and manage backup archives 23

Restore system records and private files 24

Sign in and set your password

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

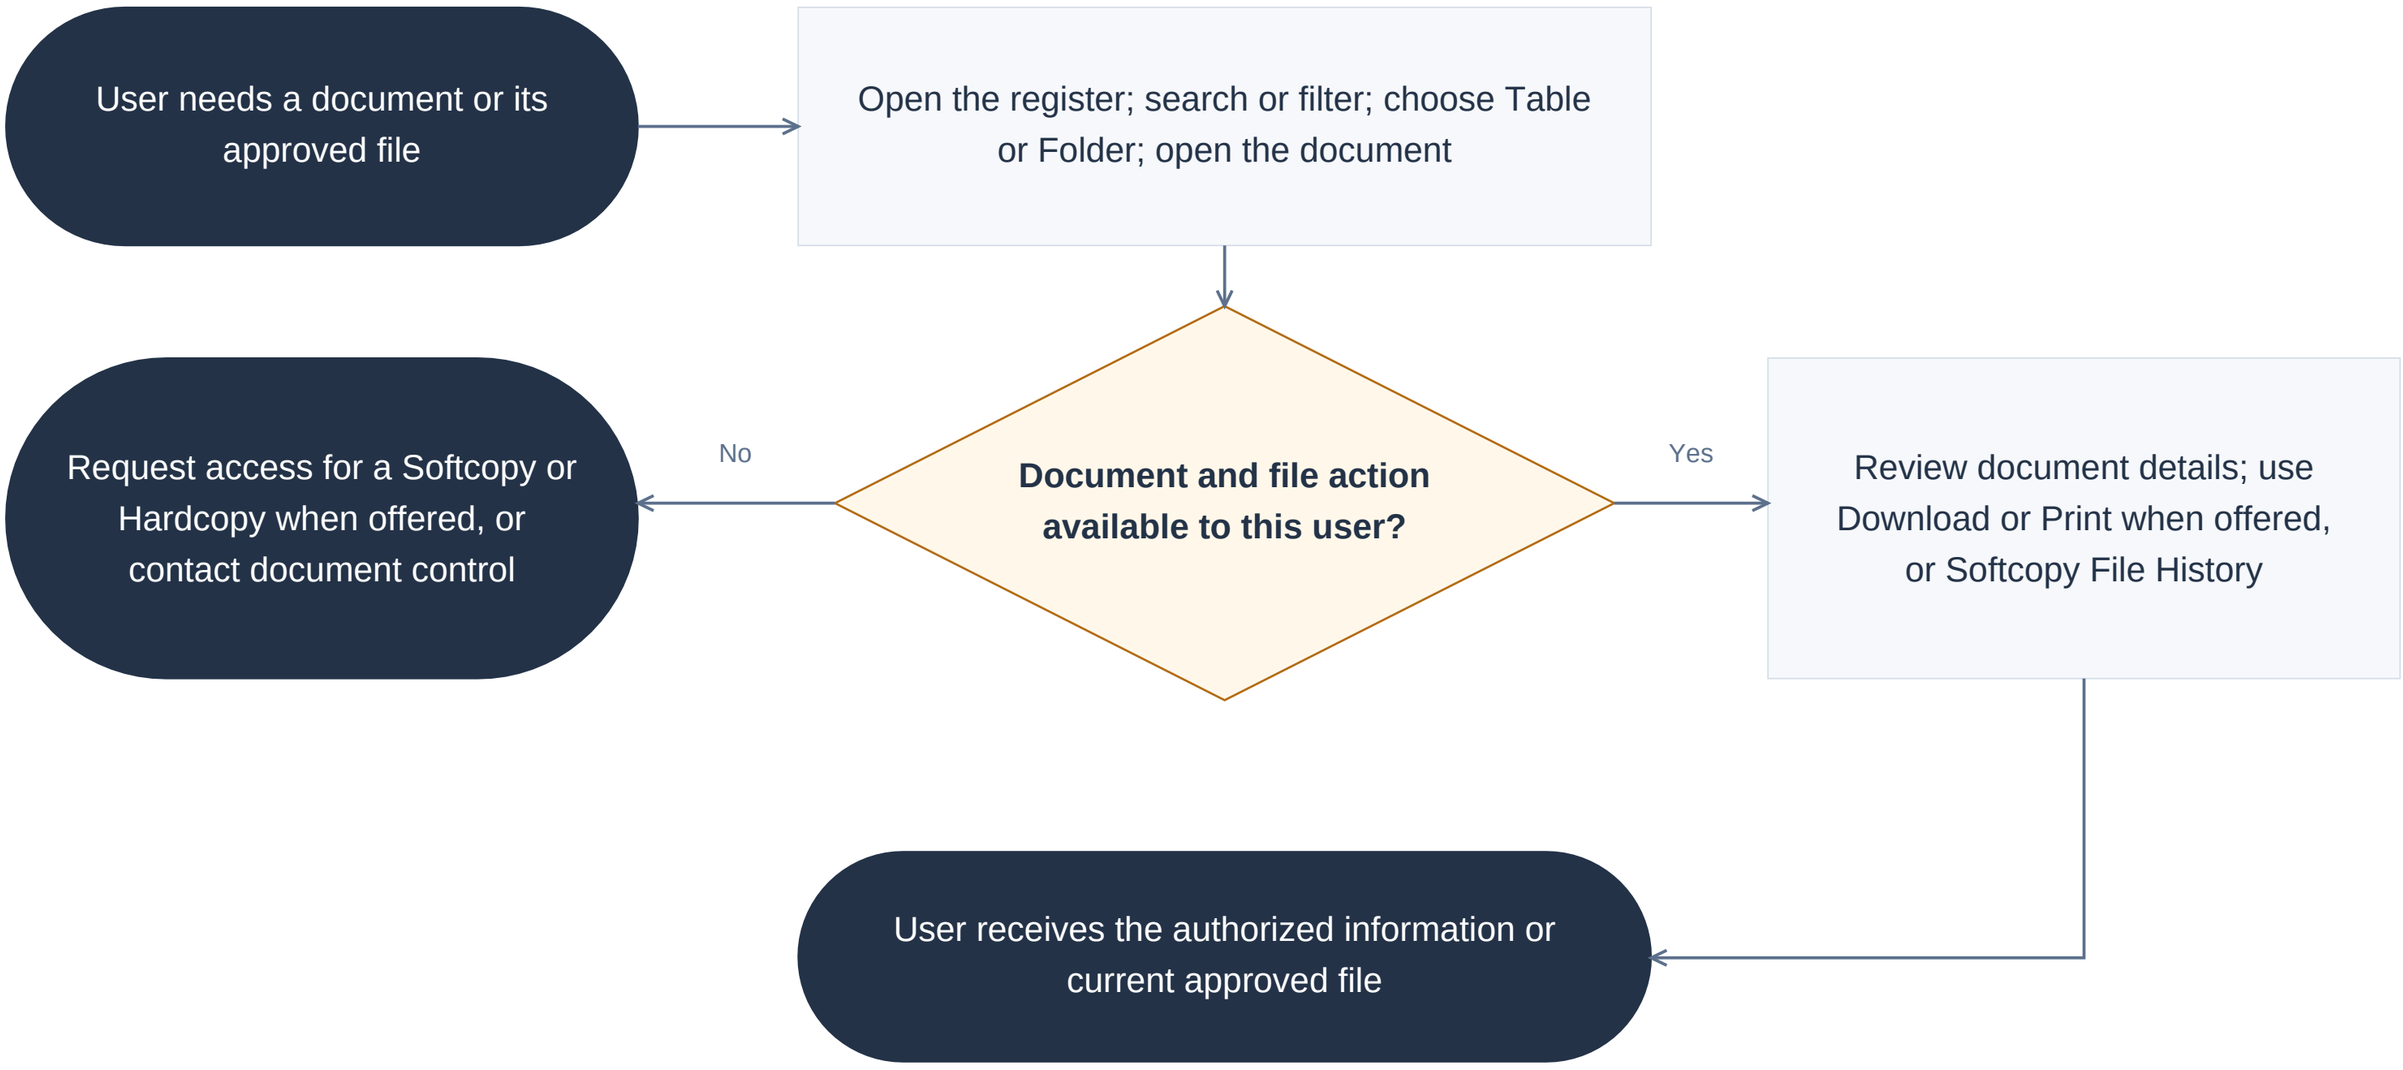

New and reset accounts must change their temporary password before using protected pages.

Choose a different password of at least 9 characters; enter the same new password twice.

Primary and assigned active roles combine permissions. Sign out after work on a shared device.

Find a document and open its current file

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

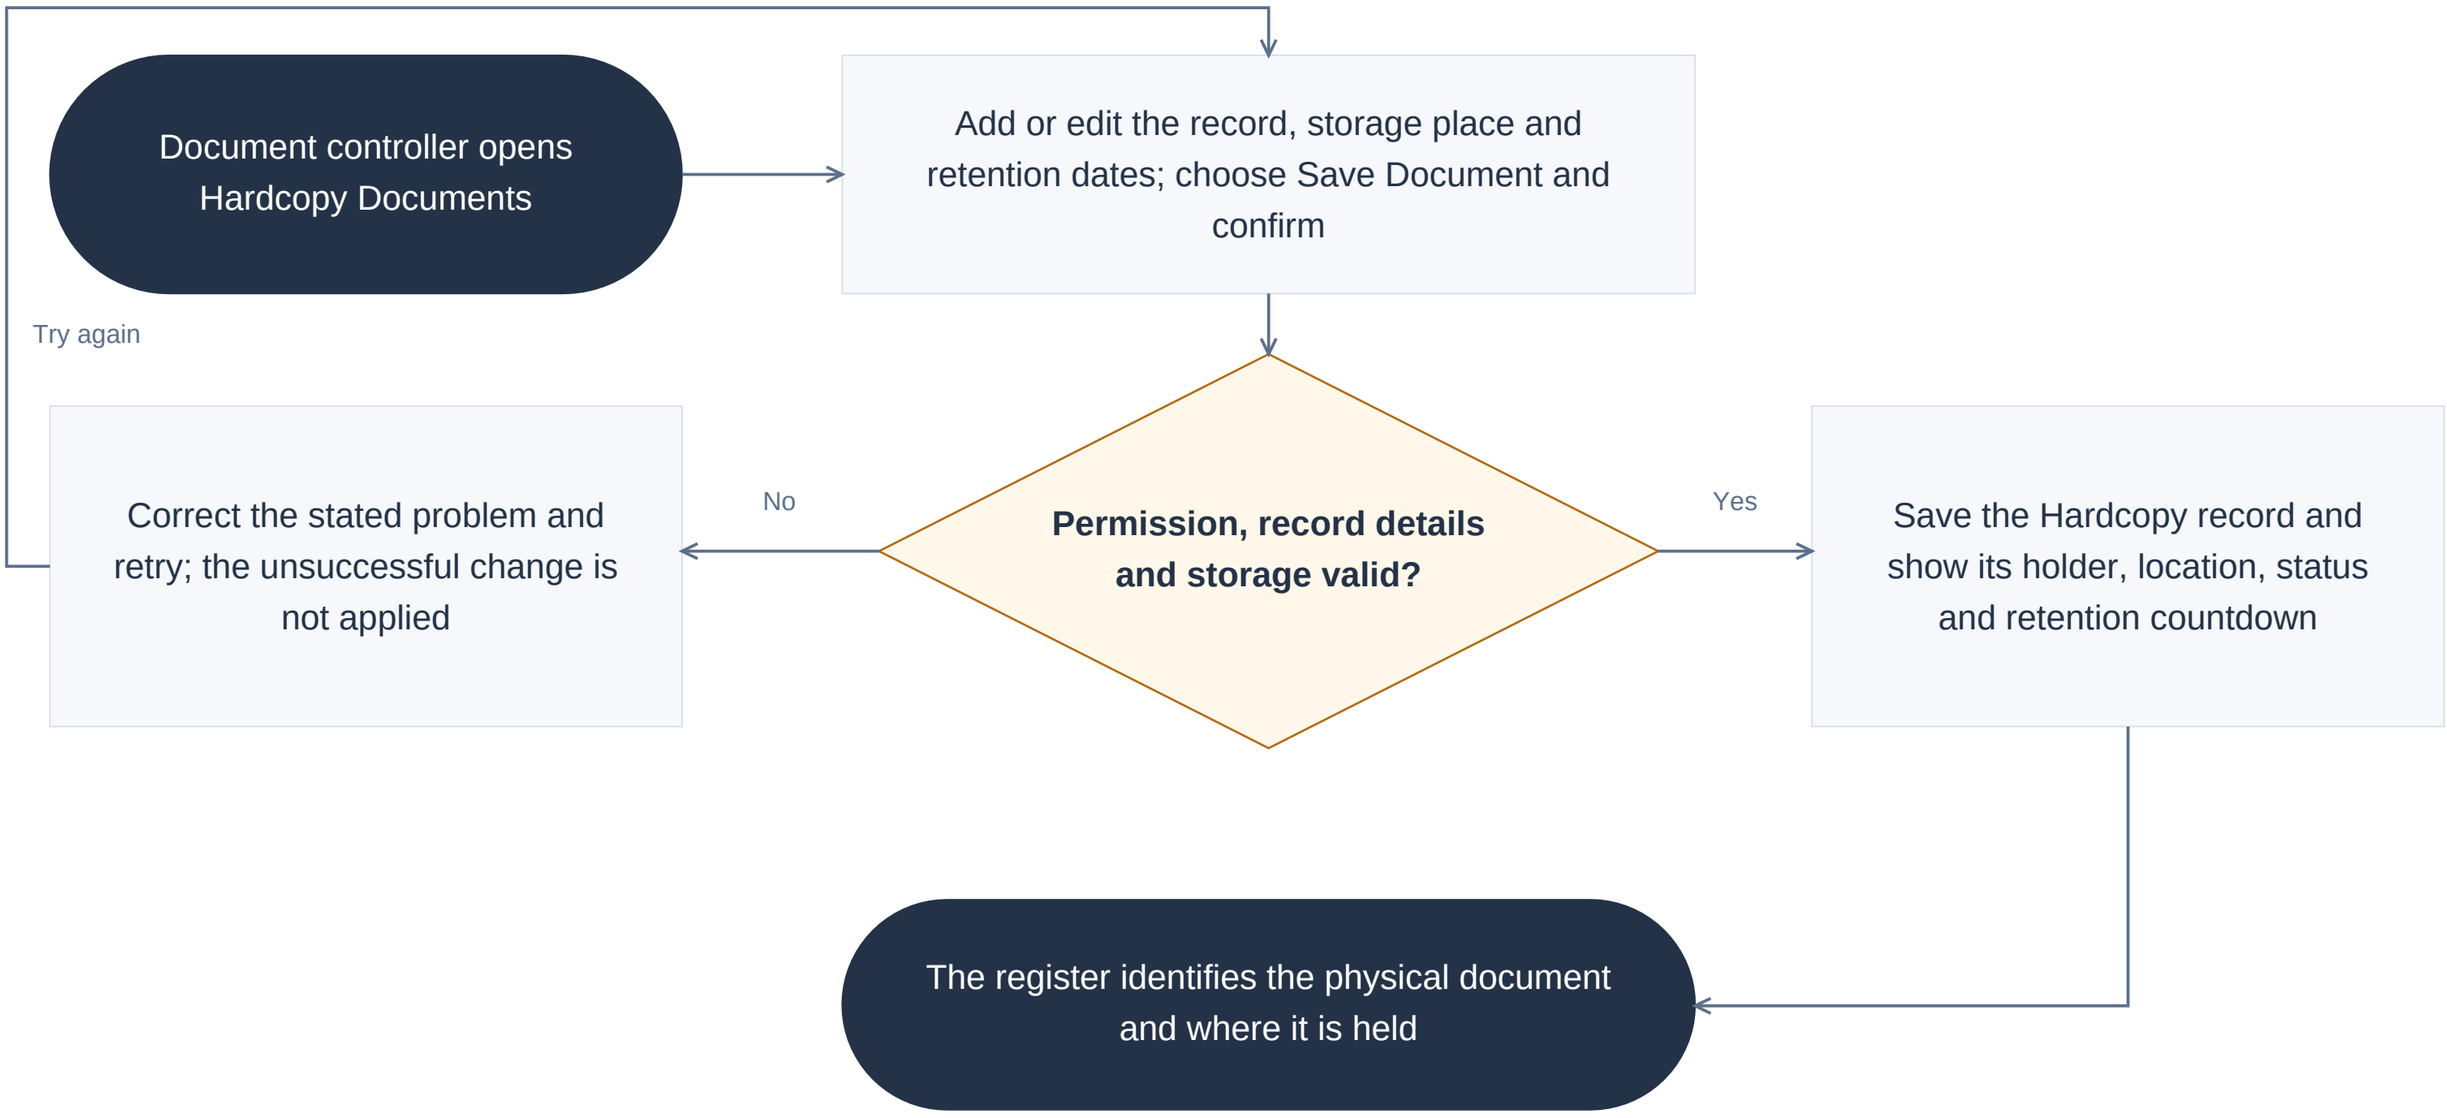

Page access, document access and file actions are separate permissions. Pending proposal files are for authorized review.

External Documents use a separate category list and a Download action for the current file.

Softcopy shows permitted revision history. External revision records remain stored but have no separate File History action.

Register, edit and track a Hardcopy

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

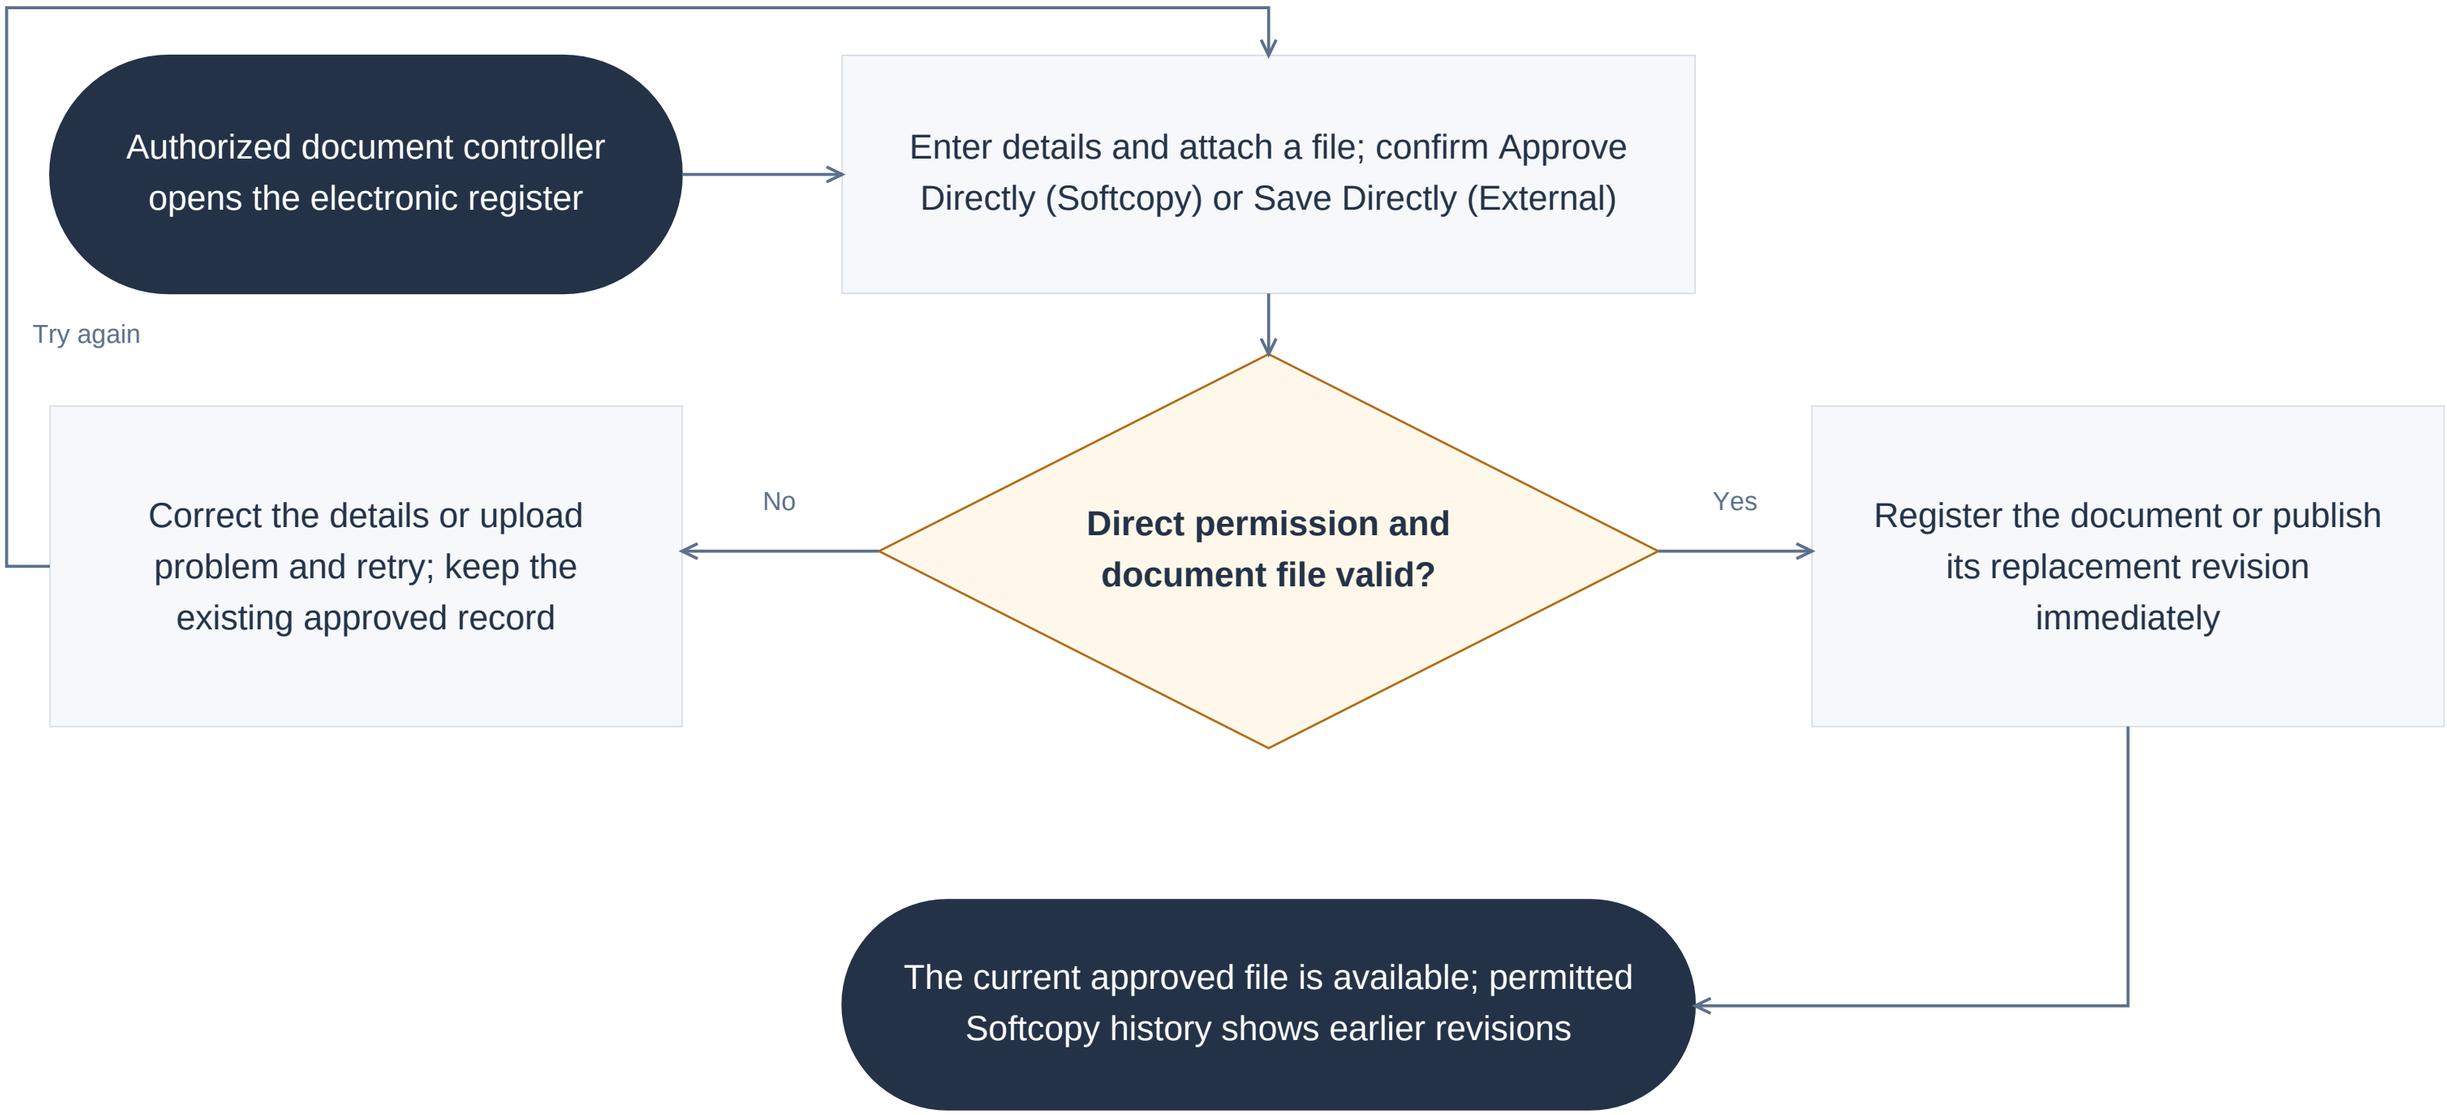

Only an Administrator or the current holder with direct permission can edit. Only an Administrator can select a different holder.

New Hardcopy creation and update requests are unavailable; authorized users maintain records directly.

Choose matching Area, Specific, optional Asset and Location. Tracking retention requires both dates in order.

Add or revise a Softcopy or External Document directly

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

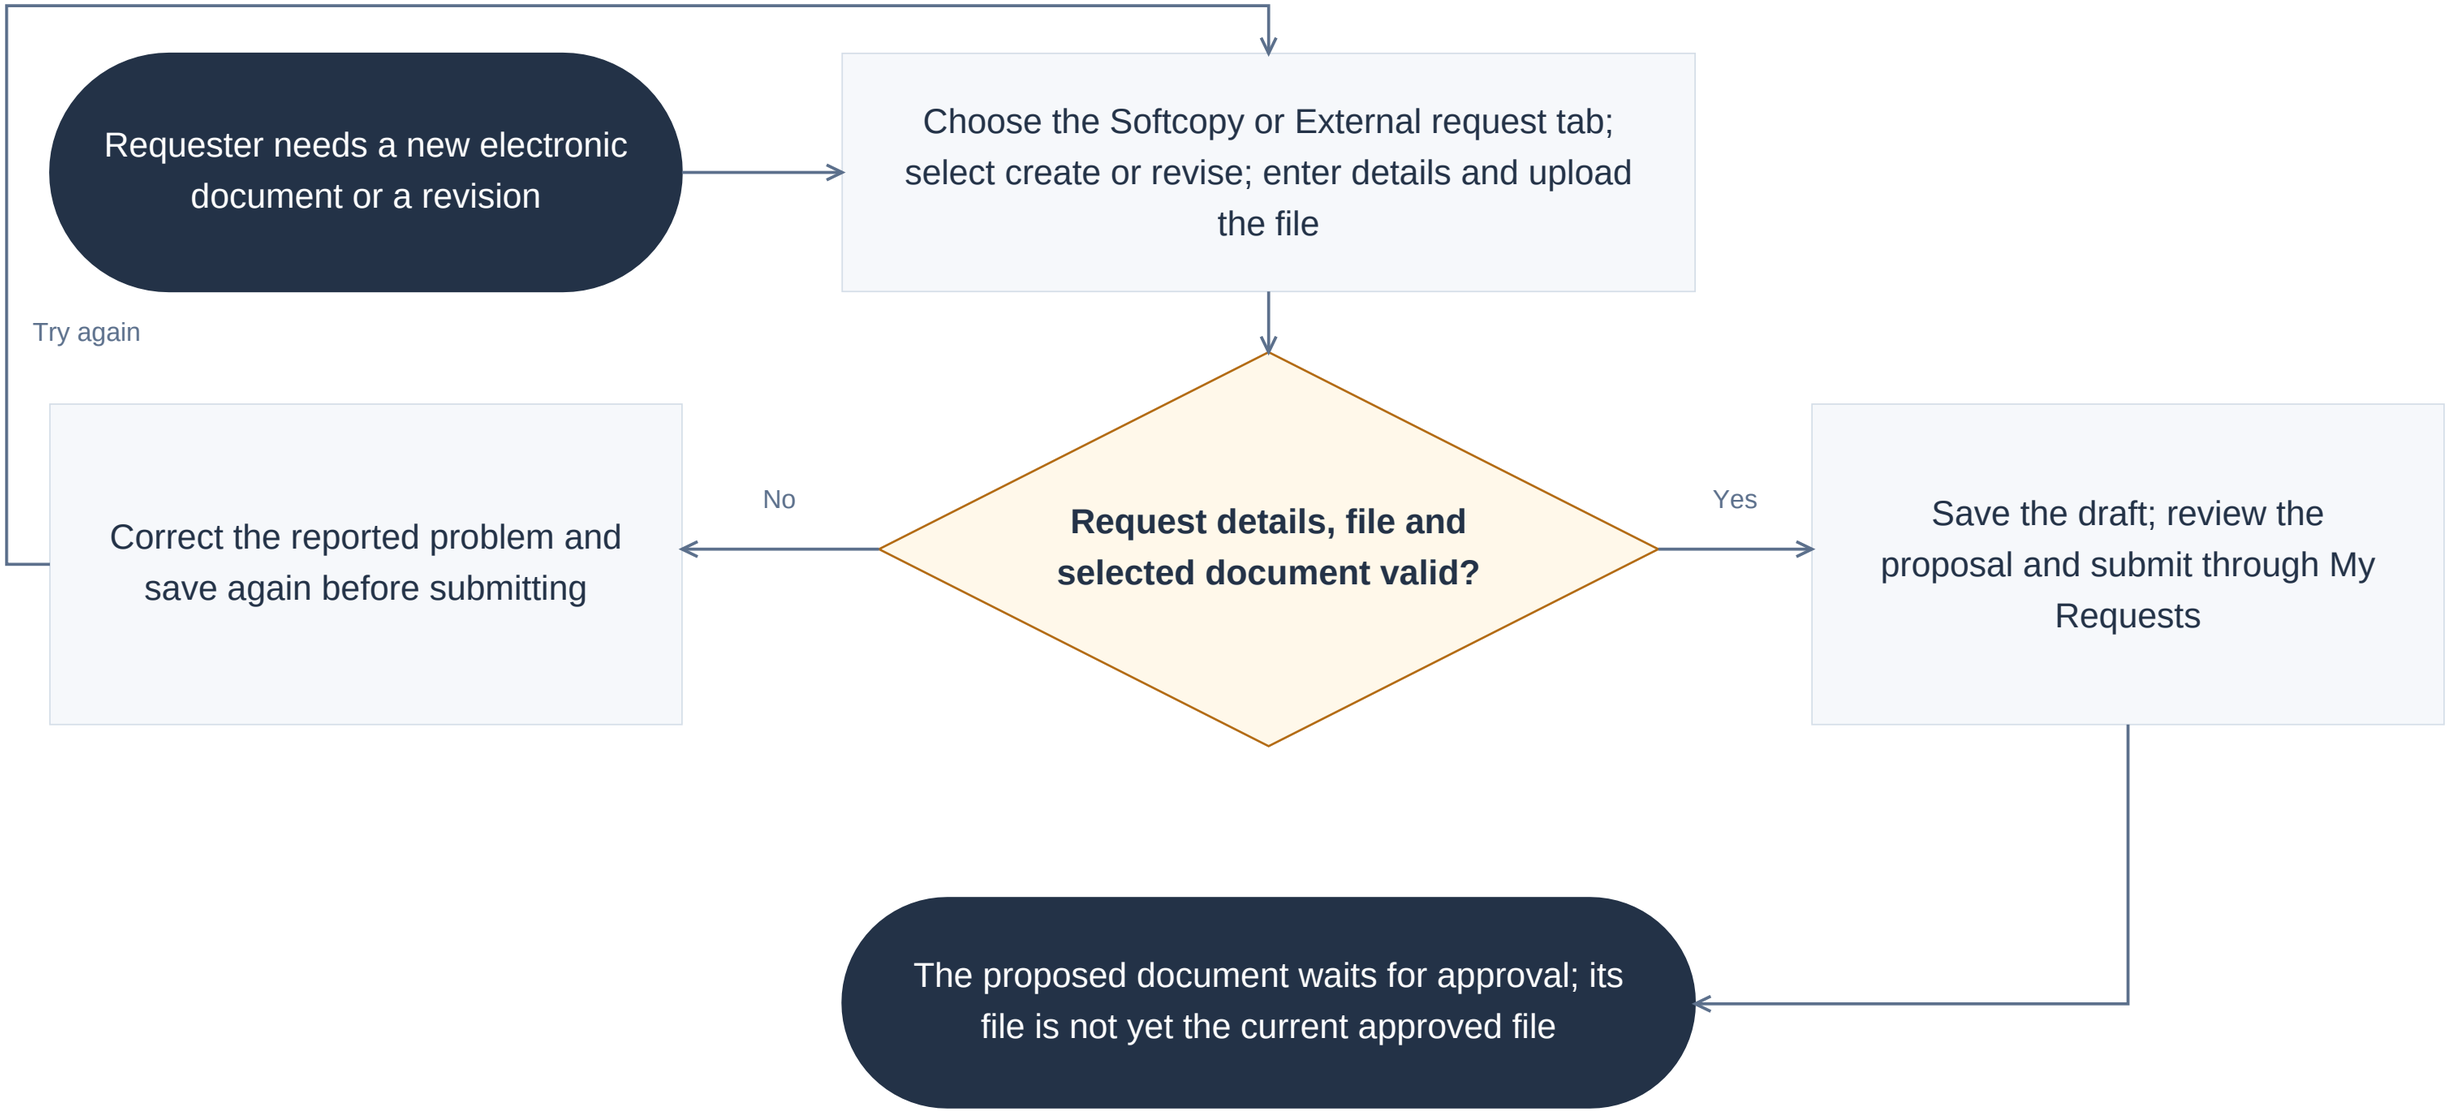

Softcopy Categories and External Categories are separate. Files must pass upload checks and be no larger than 15 MB.

A new registration and a revision both require a document file. Revision numbers and levels advance automatically.

Direct actions apply immediately. External revision records remain stored; a File History action is not provided.

Prepare a Softcopy or External Document request

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

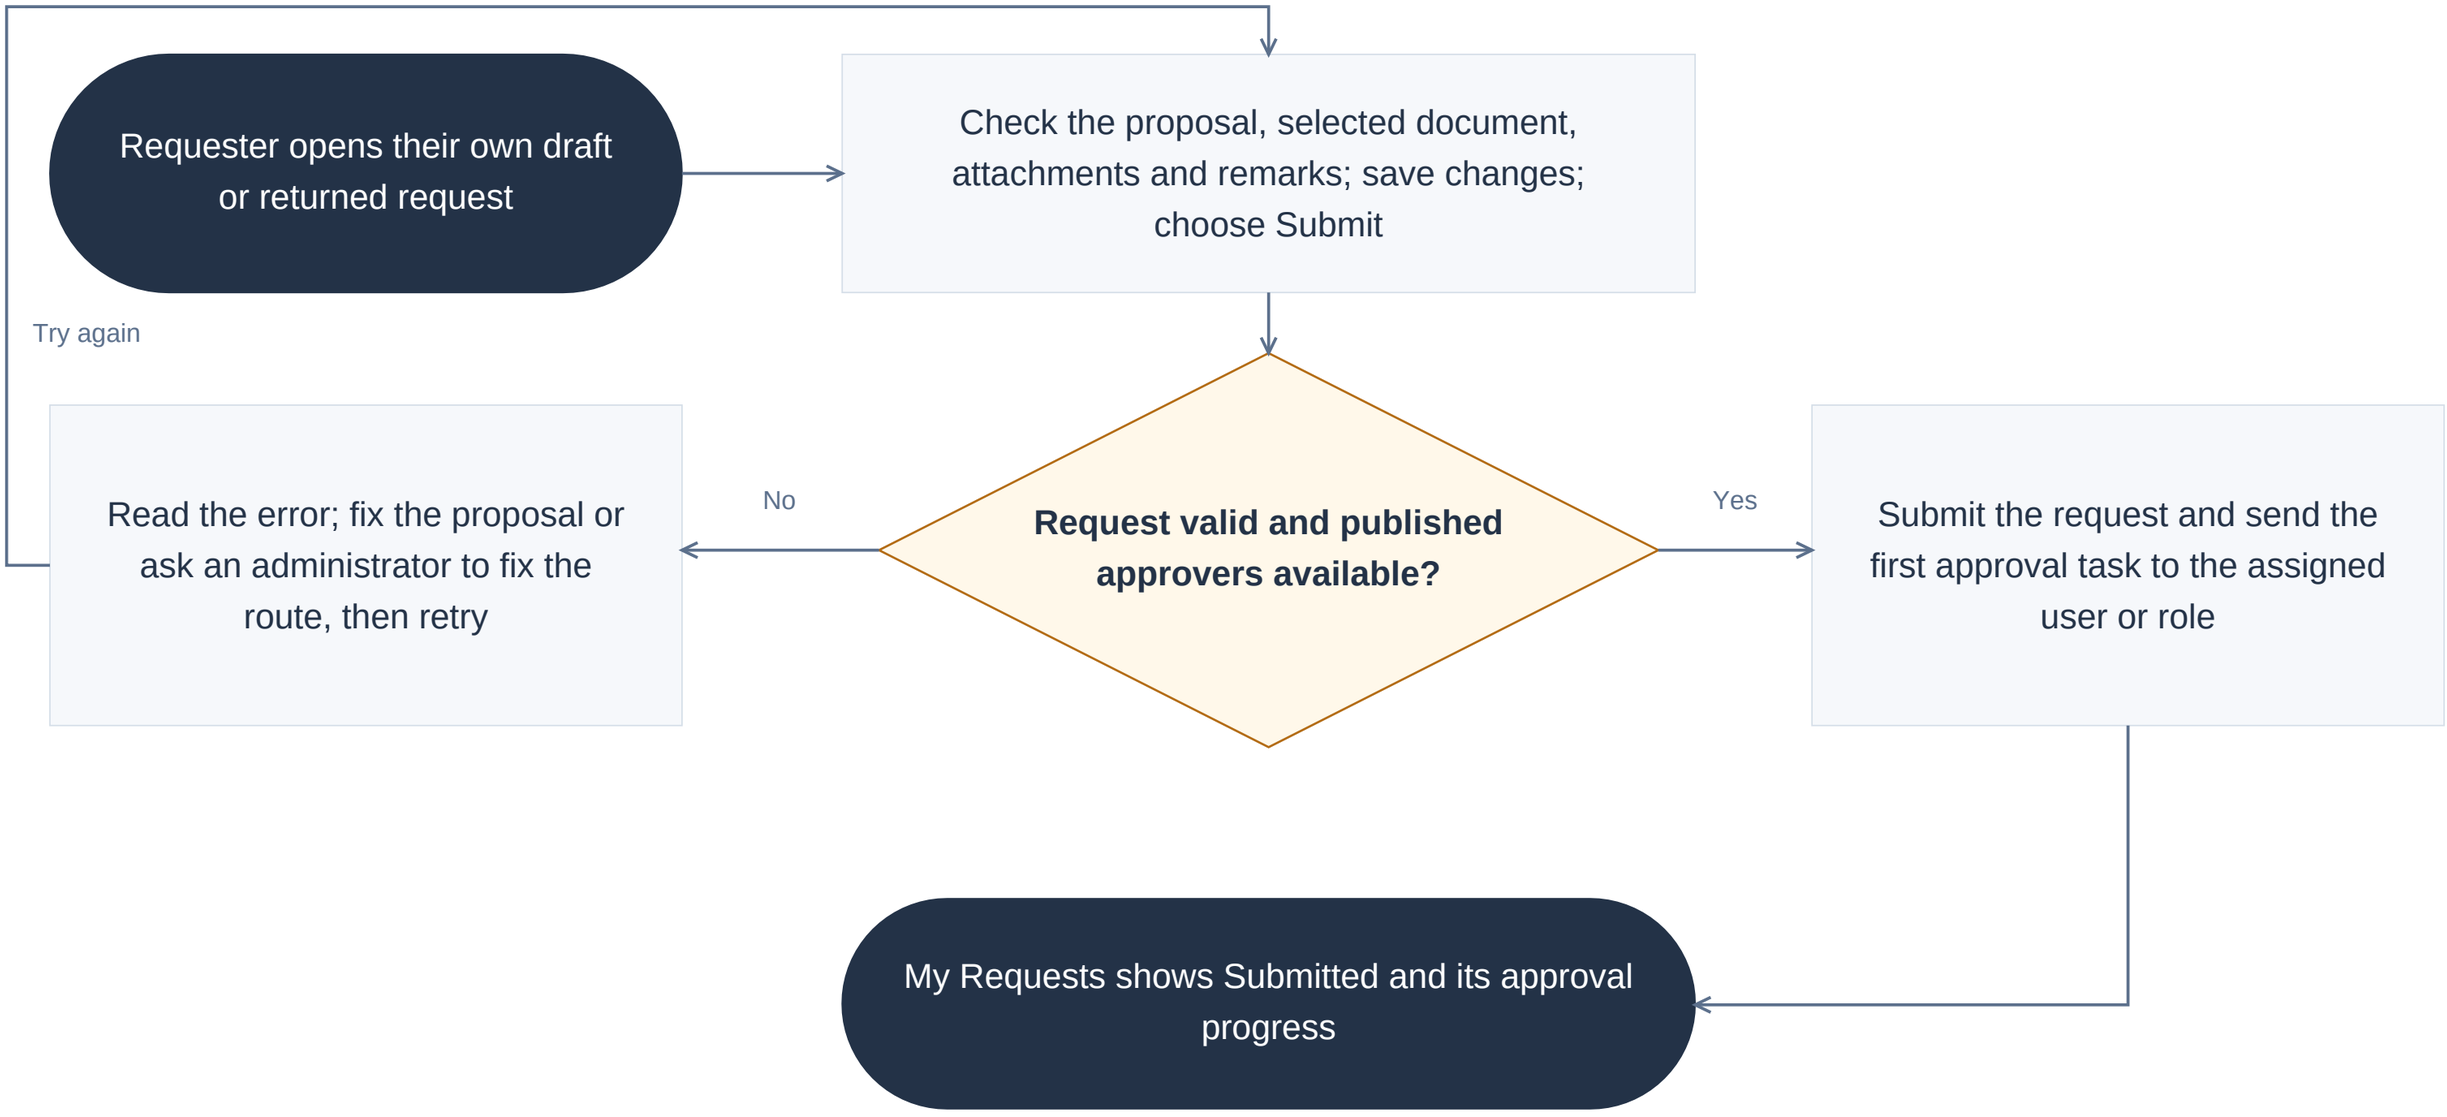

Default route: Requester's leader, then Plant Manager, then Document Control Officer. Published routes can be changed.

Revision requests select an active document in the correct register. The existing approved file remains current during review.

New Softcopy cancellation requests are unavailable. Retained historical requests may still appear.

Save and submit a request

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

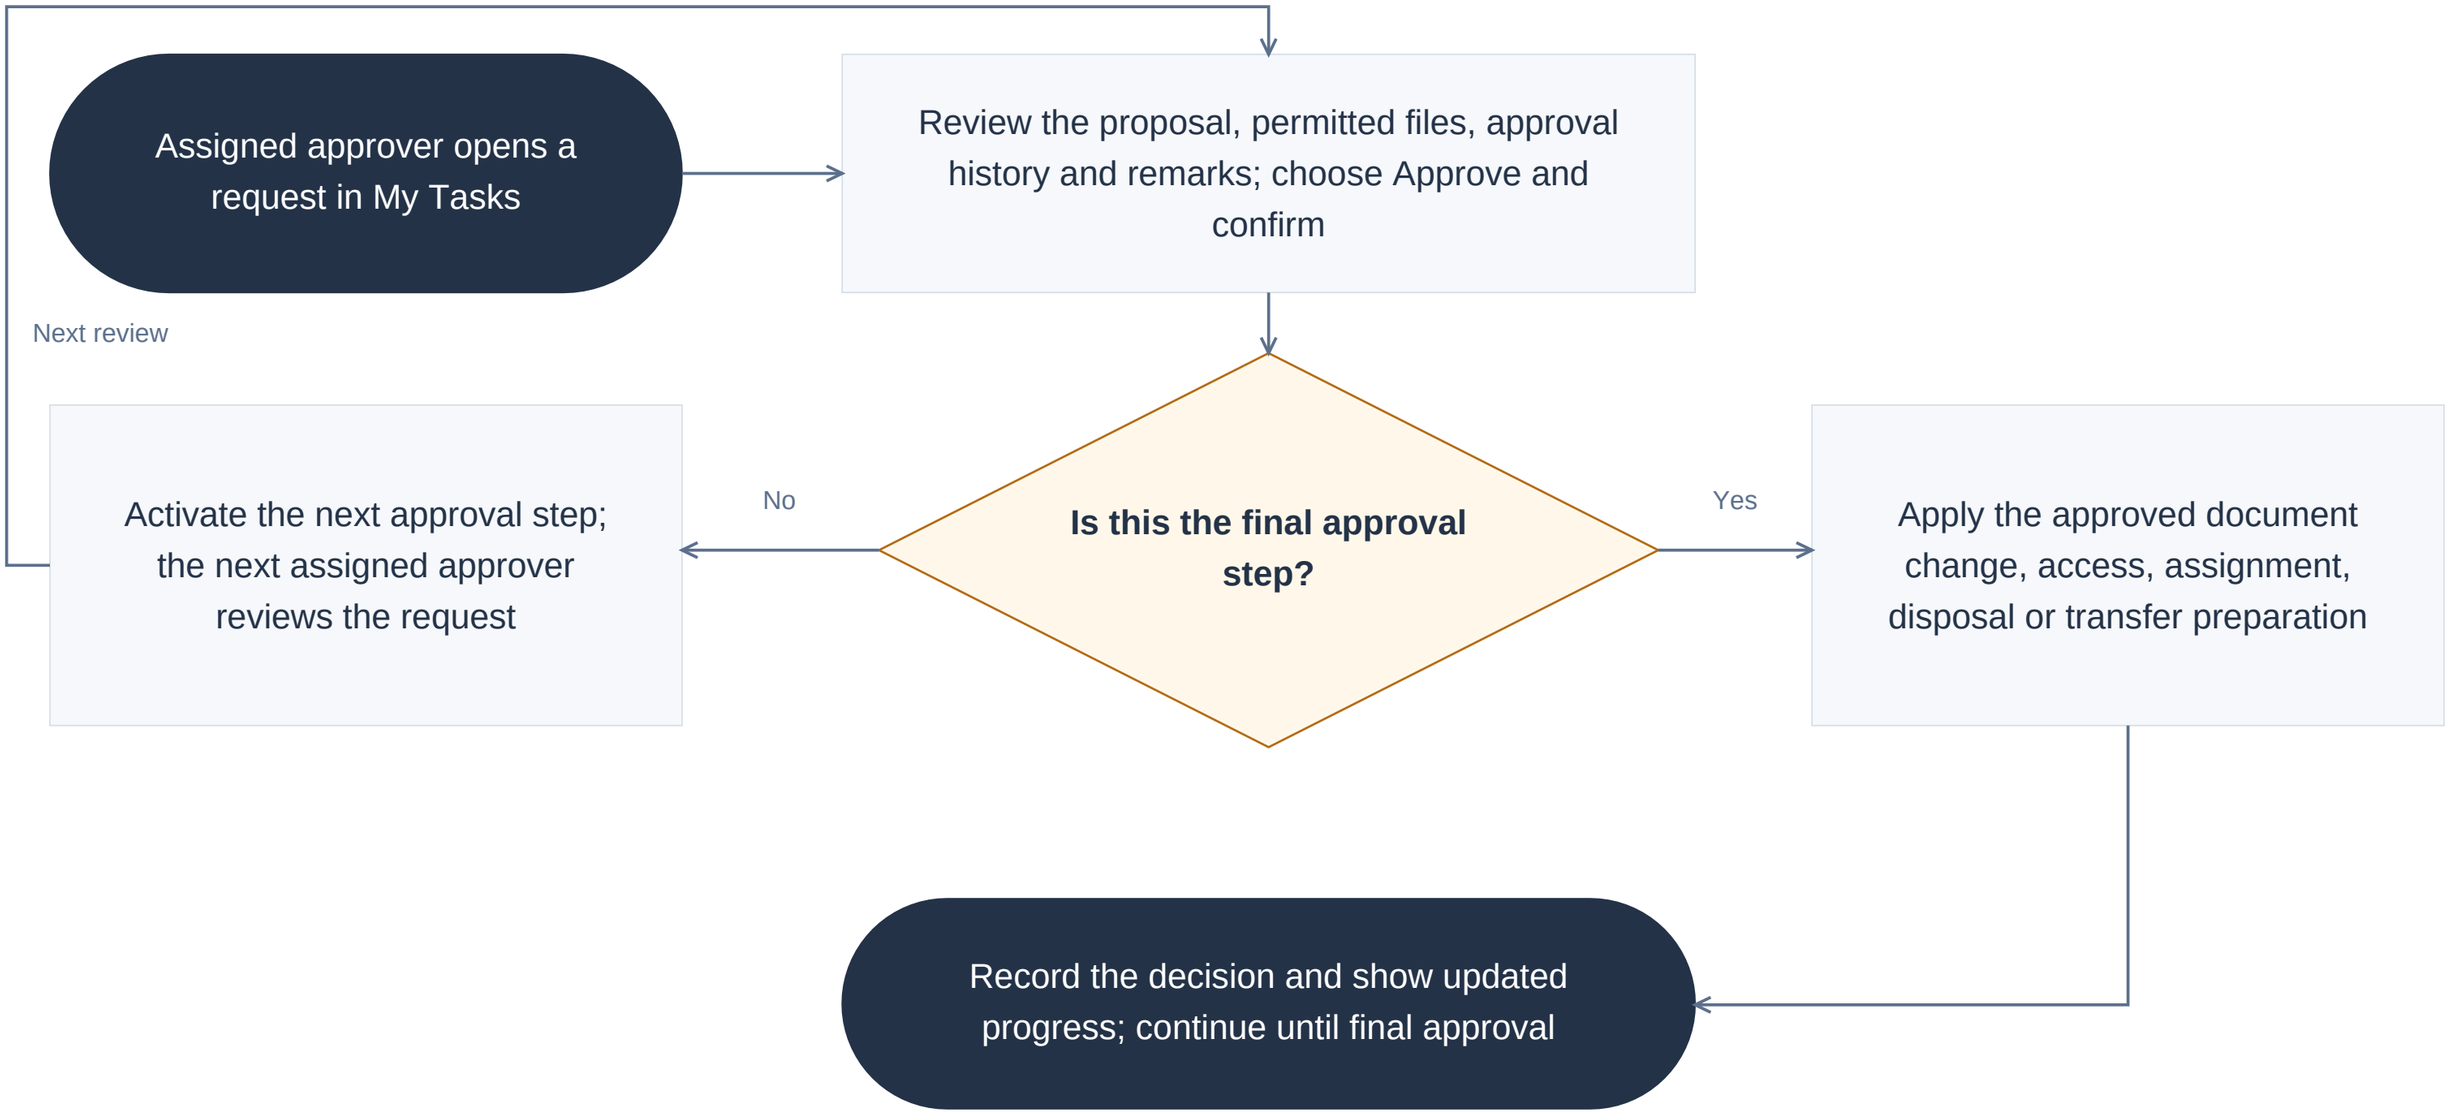

A returned request keeps its original approval route when resubmitted, even after an administrator publishes a newer route.

Cancel is available only for your own Draft. Delete is limited to your own Cancelled draft that was never submitted.

New Hardcopy create/update and Softcopy cancellation requests are unavailable; their past records remain readable.

Approve an assigned request

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

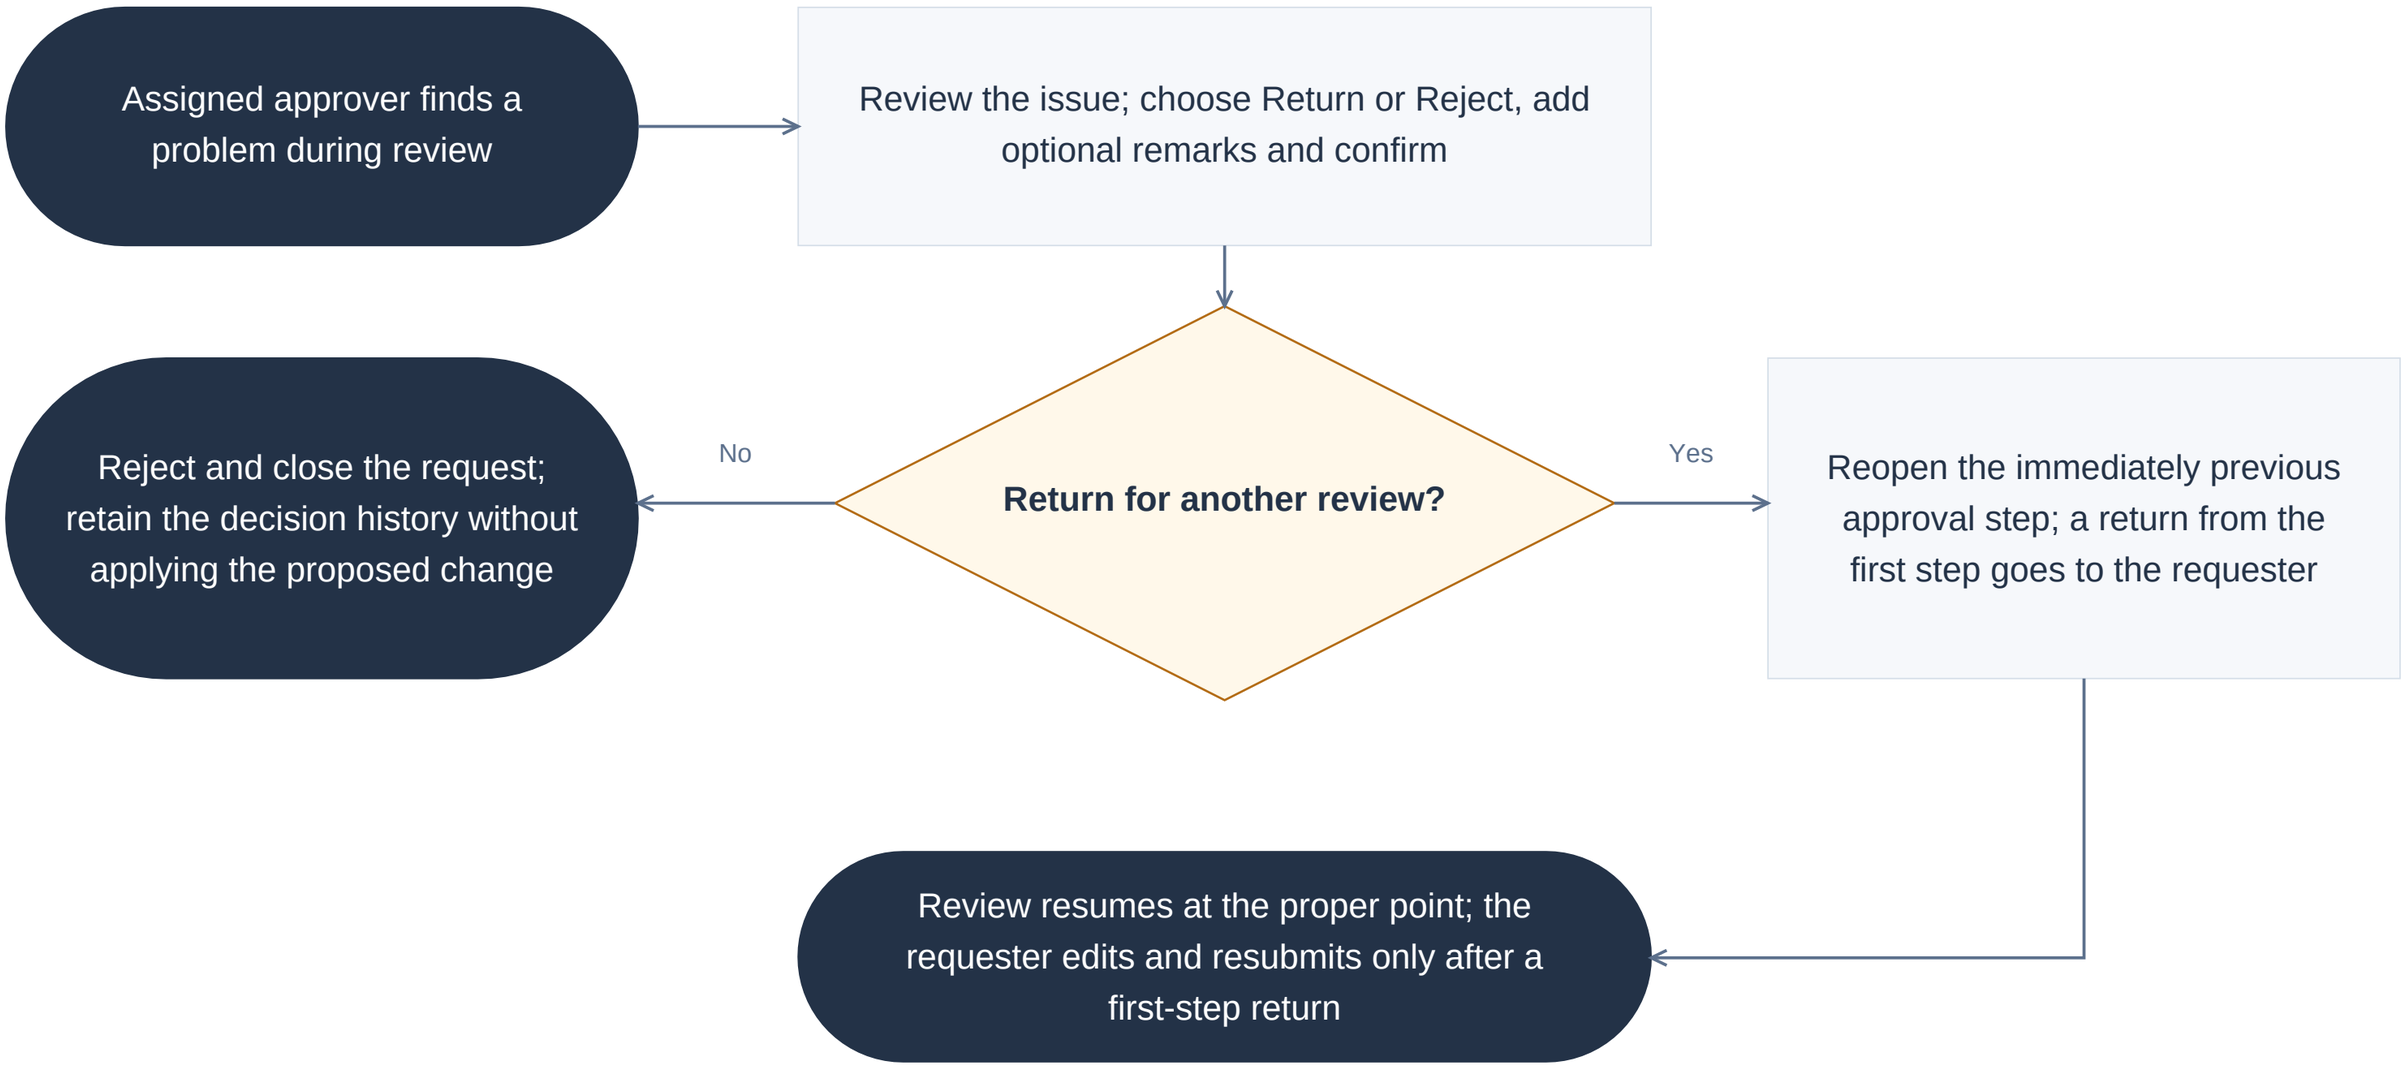

Only the currently assigned user or an active member of the assigned role can decide that step.

The approved operation takes effect at final approval. An approved transfer still requires Dispatch and Accept.

If a decision cannot be saved or applied, read the error and refresh before retrying.

Return or reject a request

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

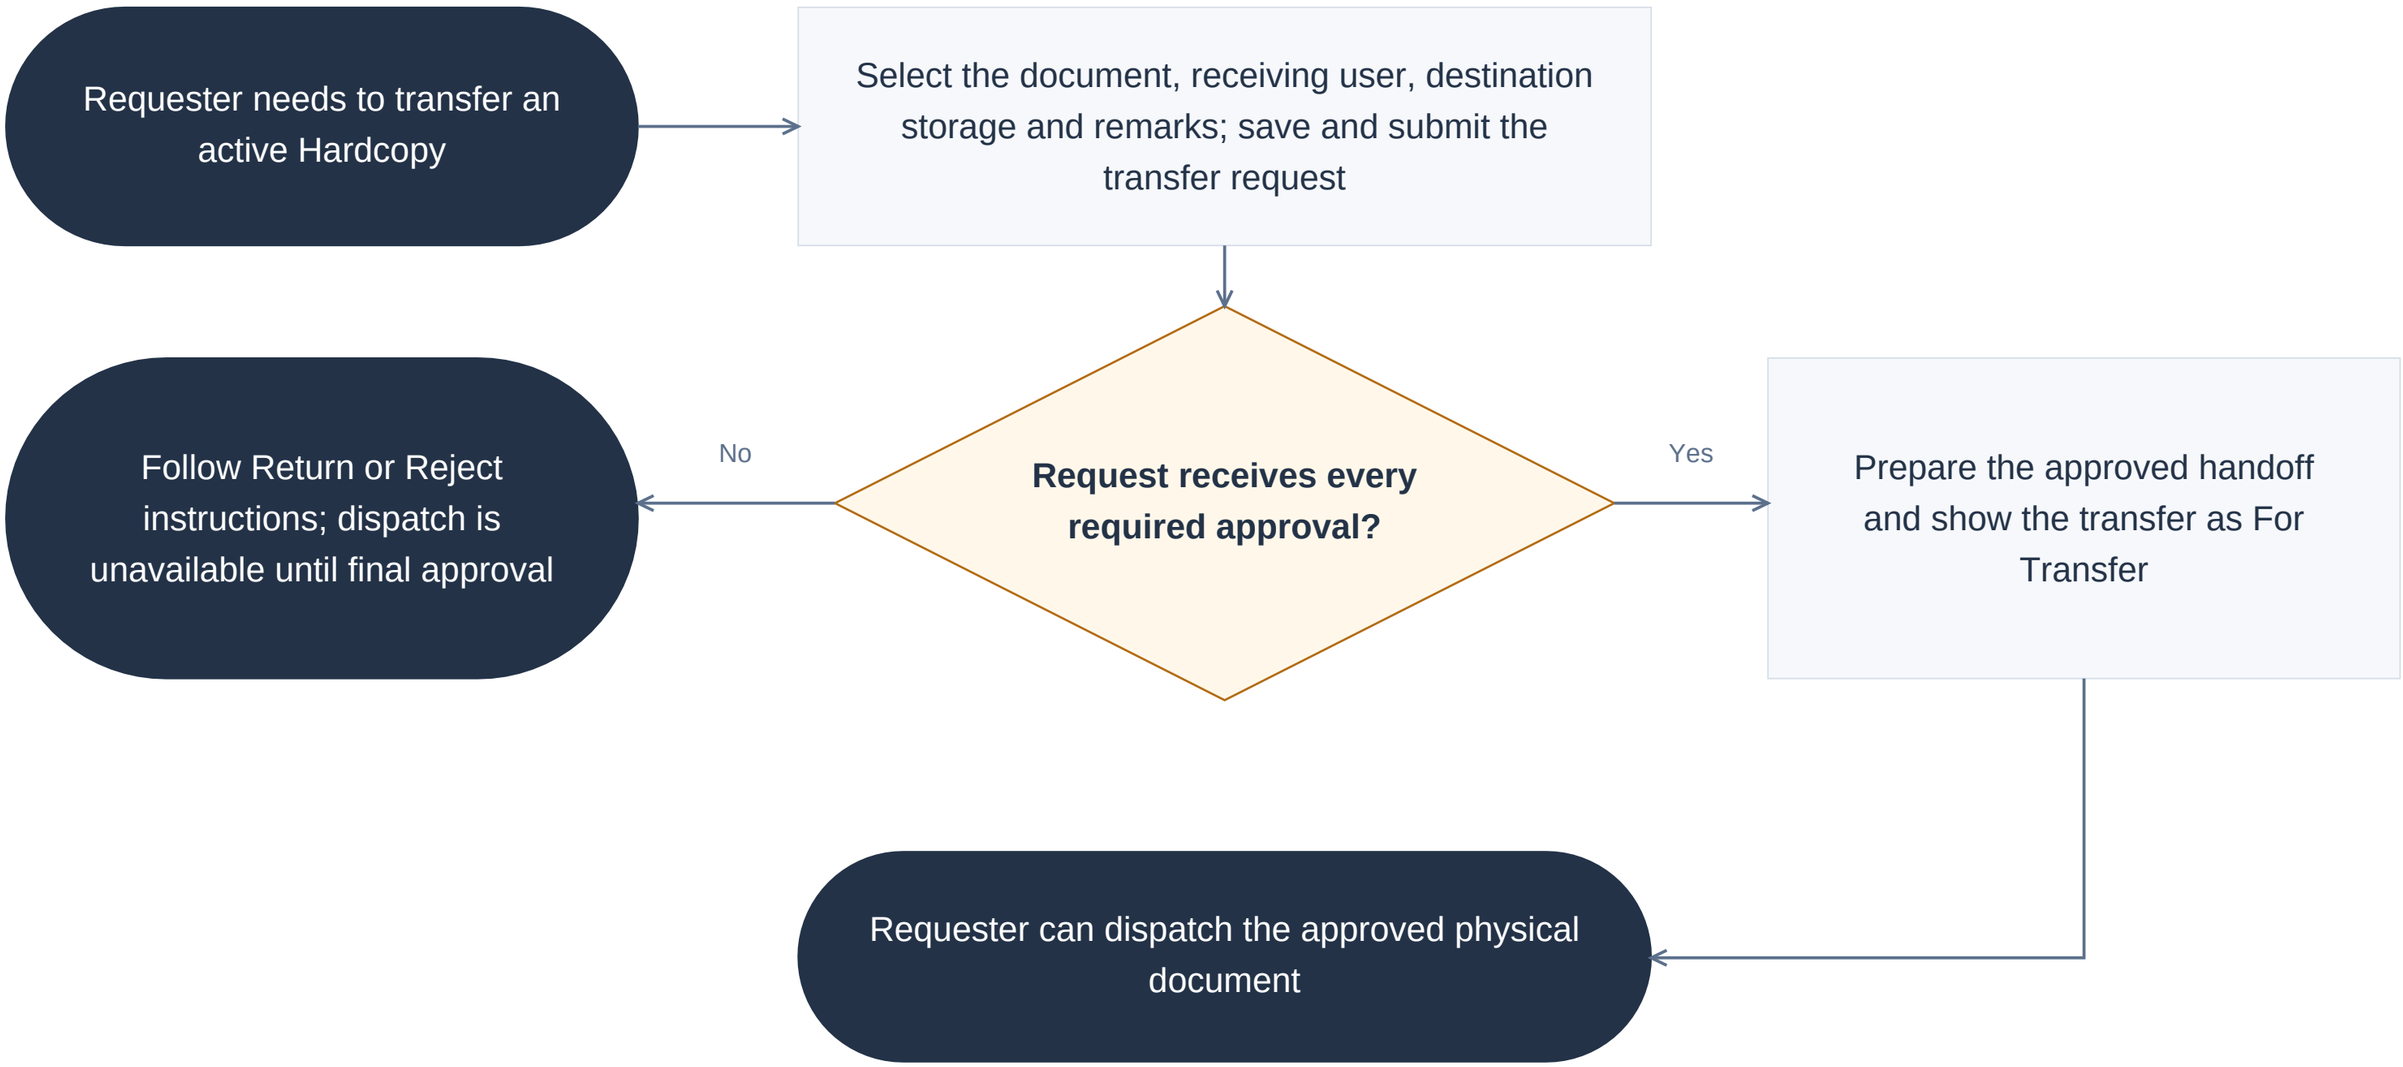

A return from a later step leaves the request Submitted and gives the task back to the previous approver.

After that approver approves again, the returned step must review again before approval can advance.

A first-step return marks the request Returned. The requester corrects it and resubmits using the original route.

Request approval to transfer a Hardcopy

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

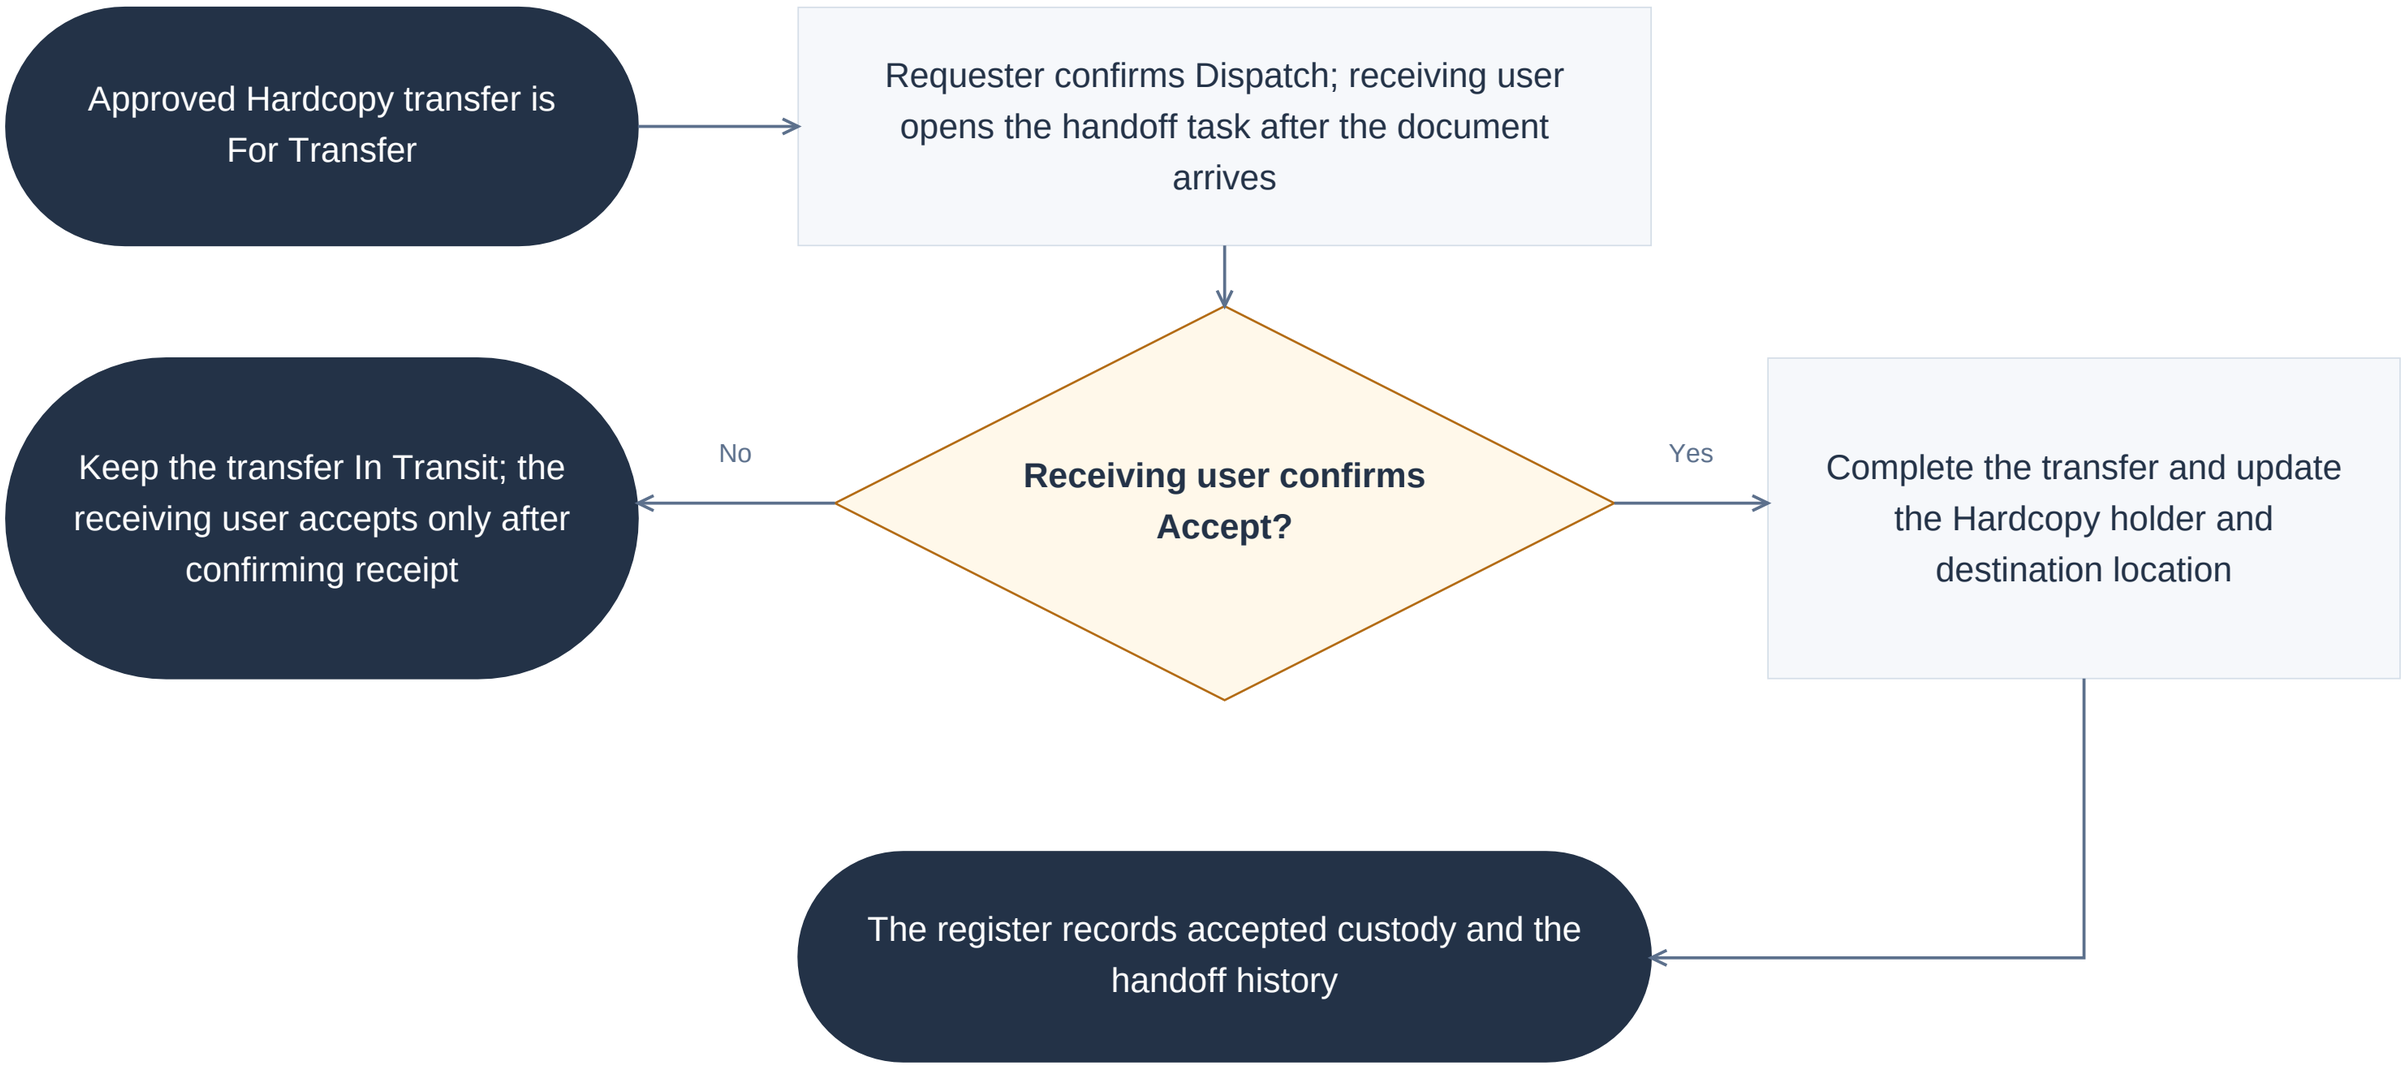

Default route: Plant Manager, then Document Control Officer, then Requester confirmation.

The source and destination must be valid and the receiving account active; conflicting pending requests or transfers can block it.

Approval alone does not change the current holder or complete physical receipt.

Dispatch and accept the physical document

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

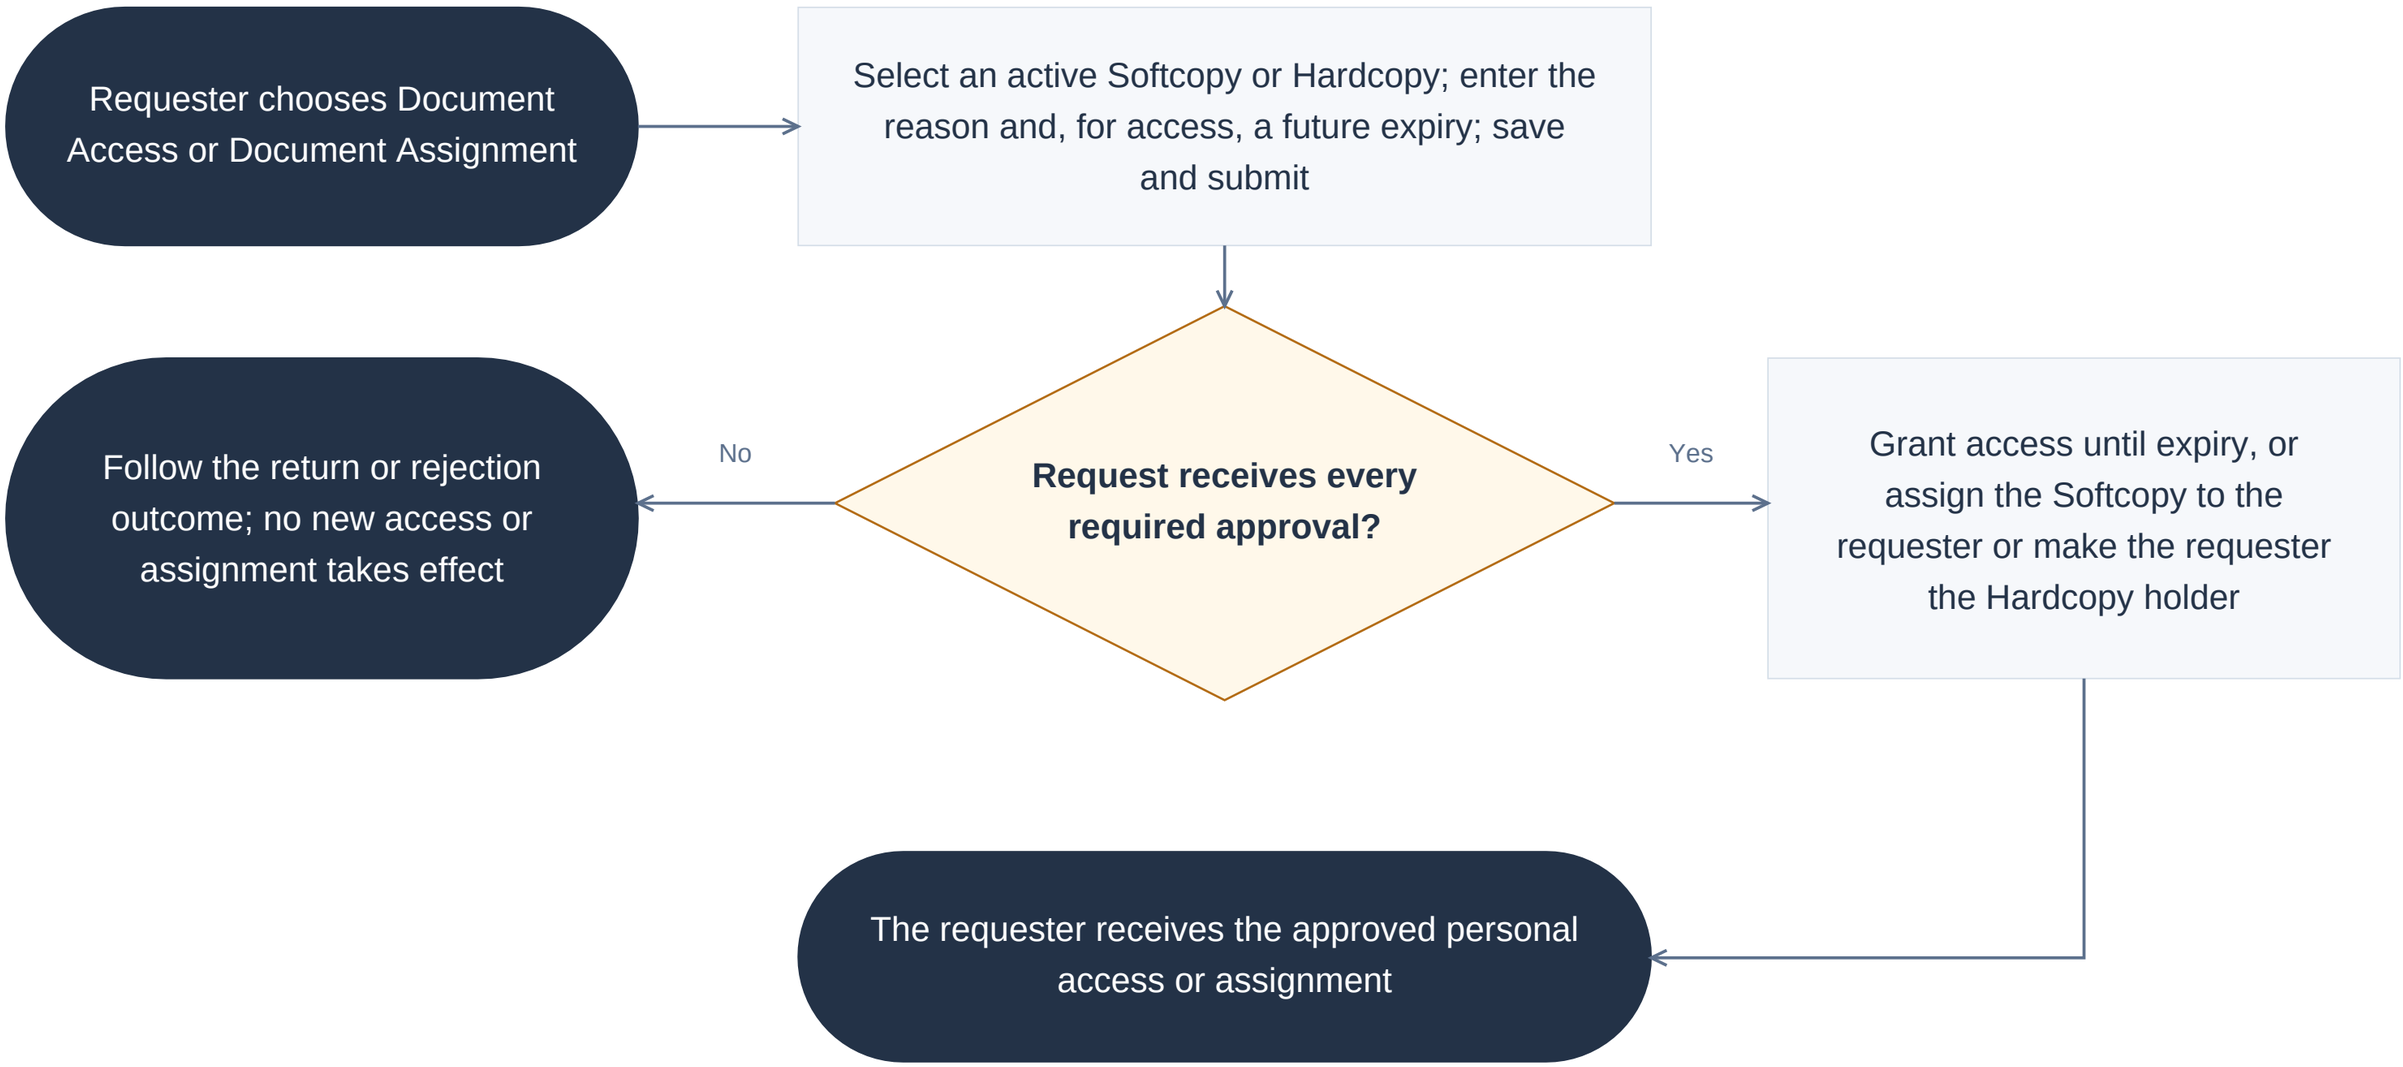

Only the requester dispatches. Only the named receiving user accepts that transfer.

Dispatch marks In Transit. Custody and location change after acceptance.

Direct reassignment is a separate immediate action and is blocked while a transfer is active.

Request personal access or document assignment

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

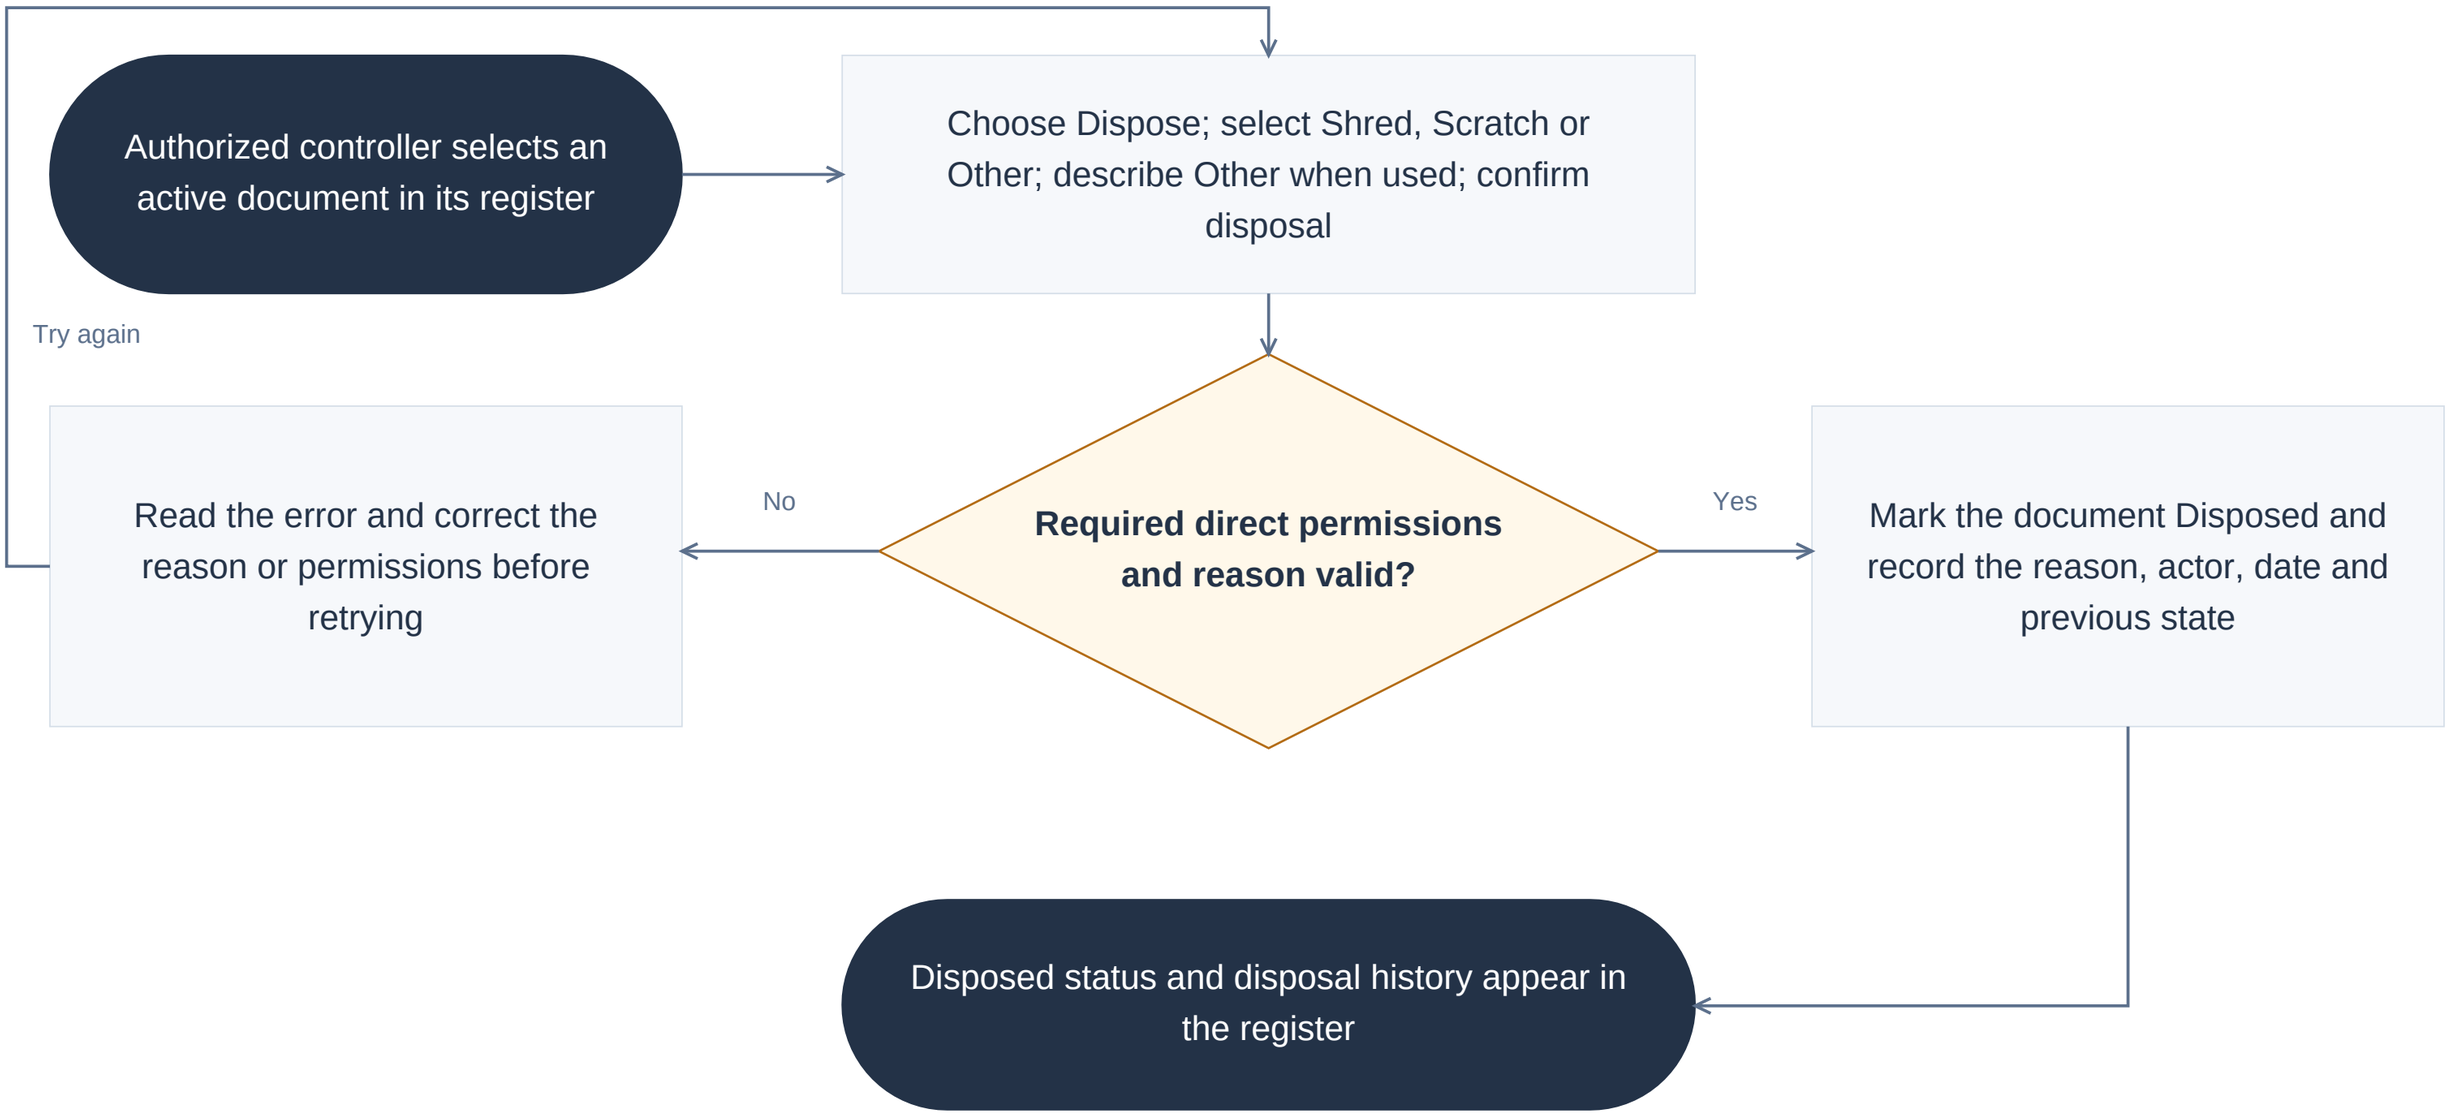

Access default: Plant Manager, Document Control Officer, Requester confirmation. Assignment ends with Requester's leader instead.

These requests are for the requester; they do not select another recipient. External Documents are not supported here.

Access expires at the end of the chosen day. Assignment is separate from an access grant; file permissions still apply.

Dispose of a document directly

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

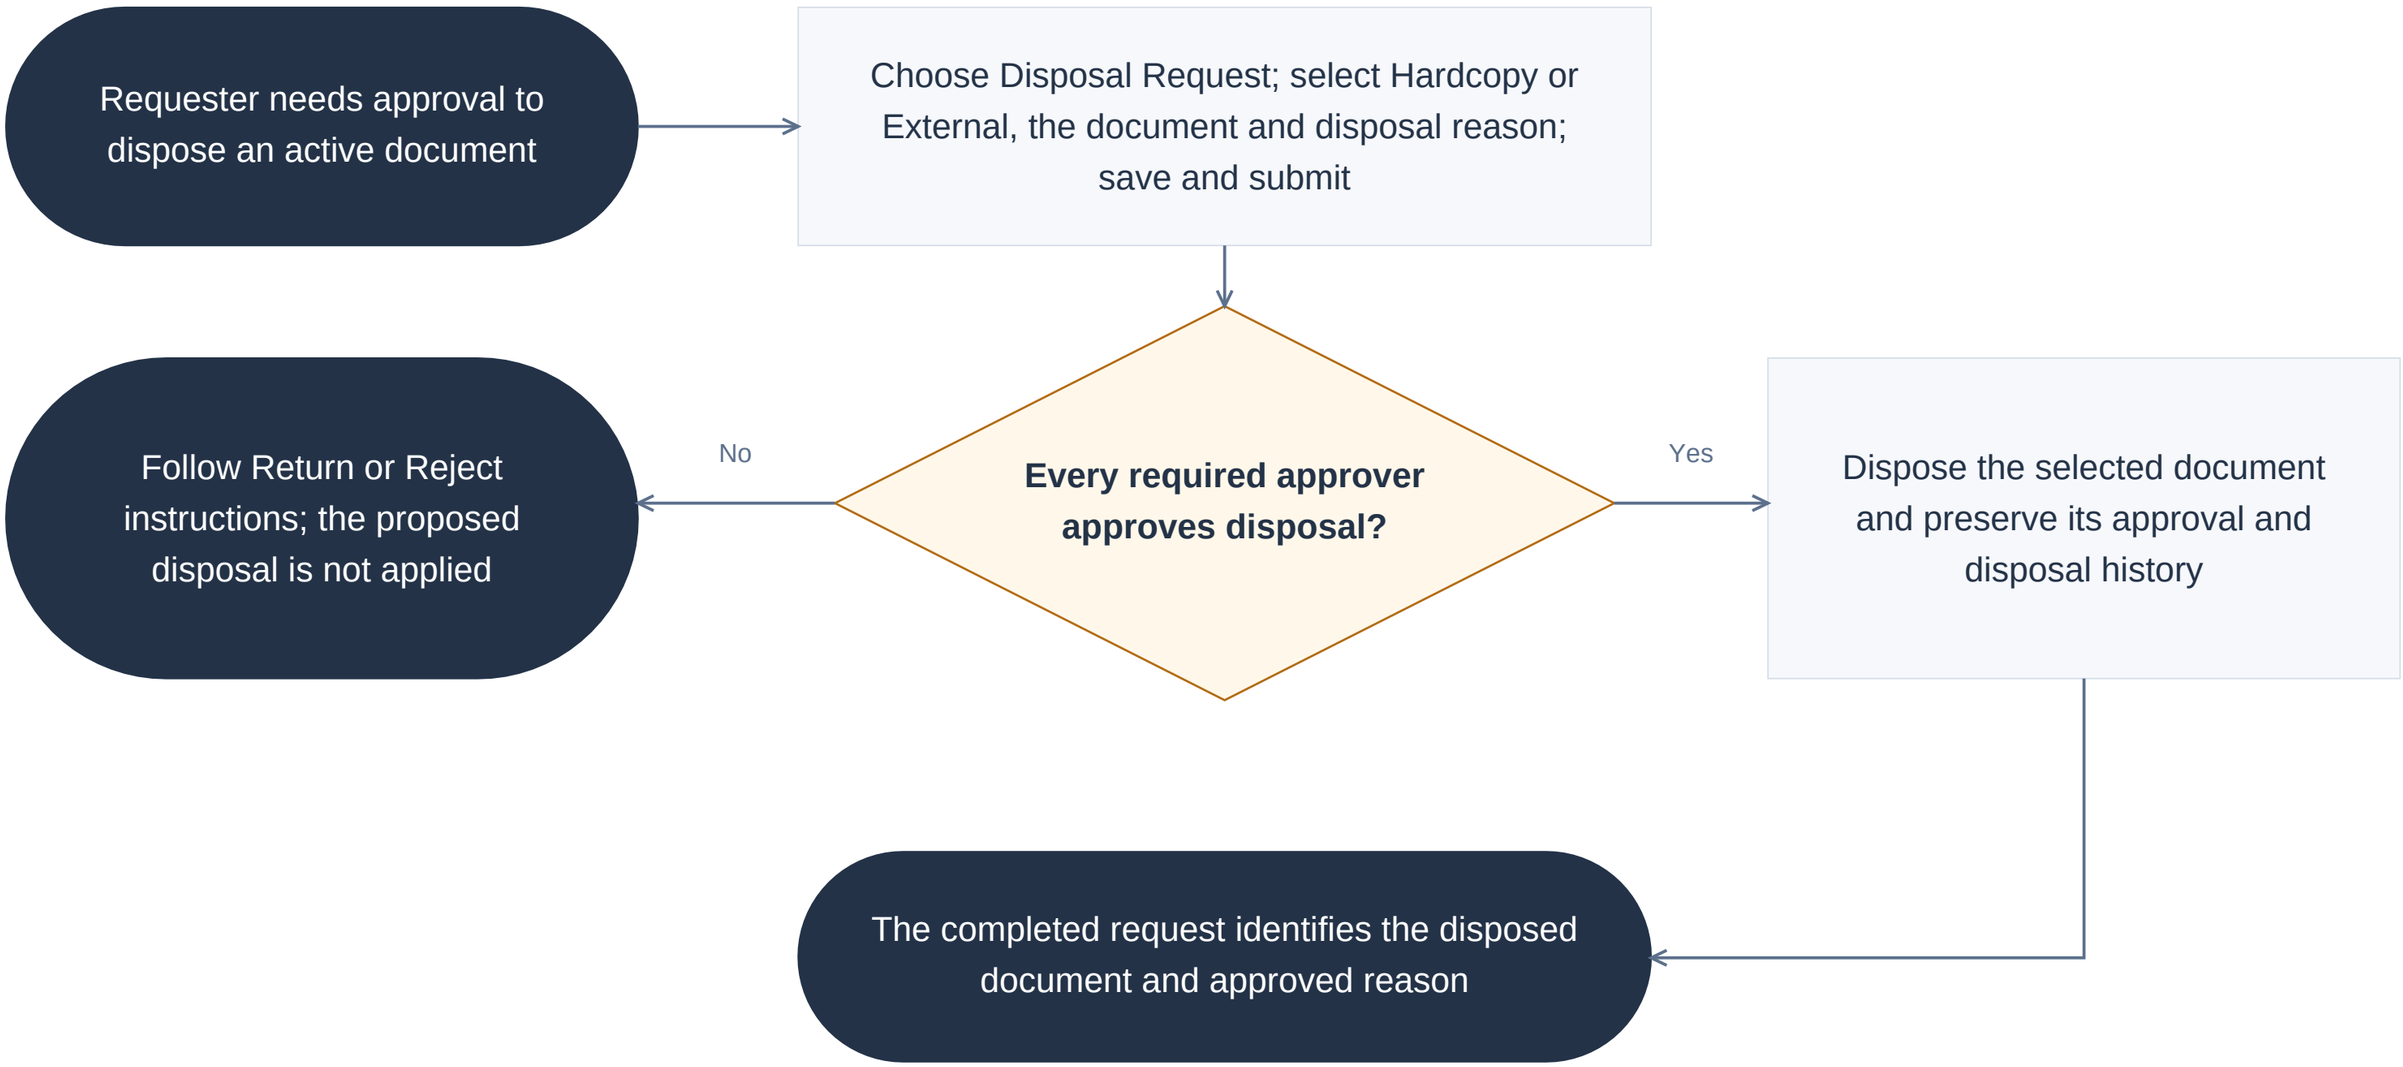

Direct disposal supports Hardcopy, Softcopy and External Documents; both register direct and disposal direct permission are required.

Softcopy disposal retires its files. External disposal keeps stored files and revision records but blocks normal download.

Direct Hardcopy disposal keeps its recorded location. Approval-based Hardcopy disposal clears the location and personal grants.

Request Hardcopy or External Document disposal

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

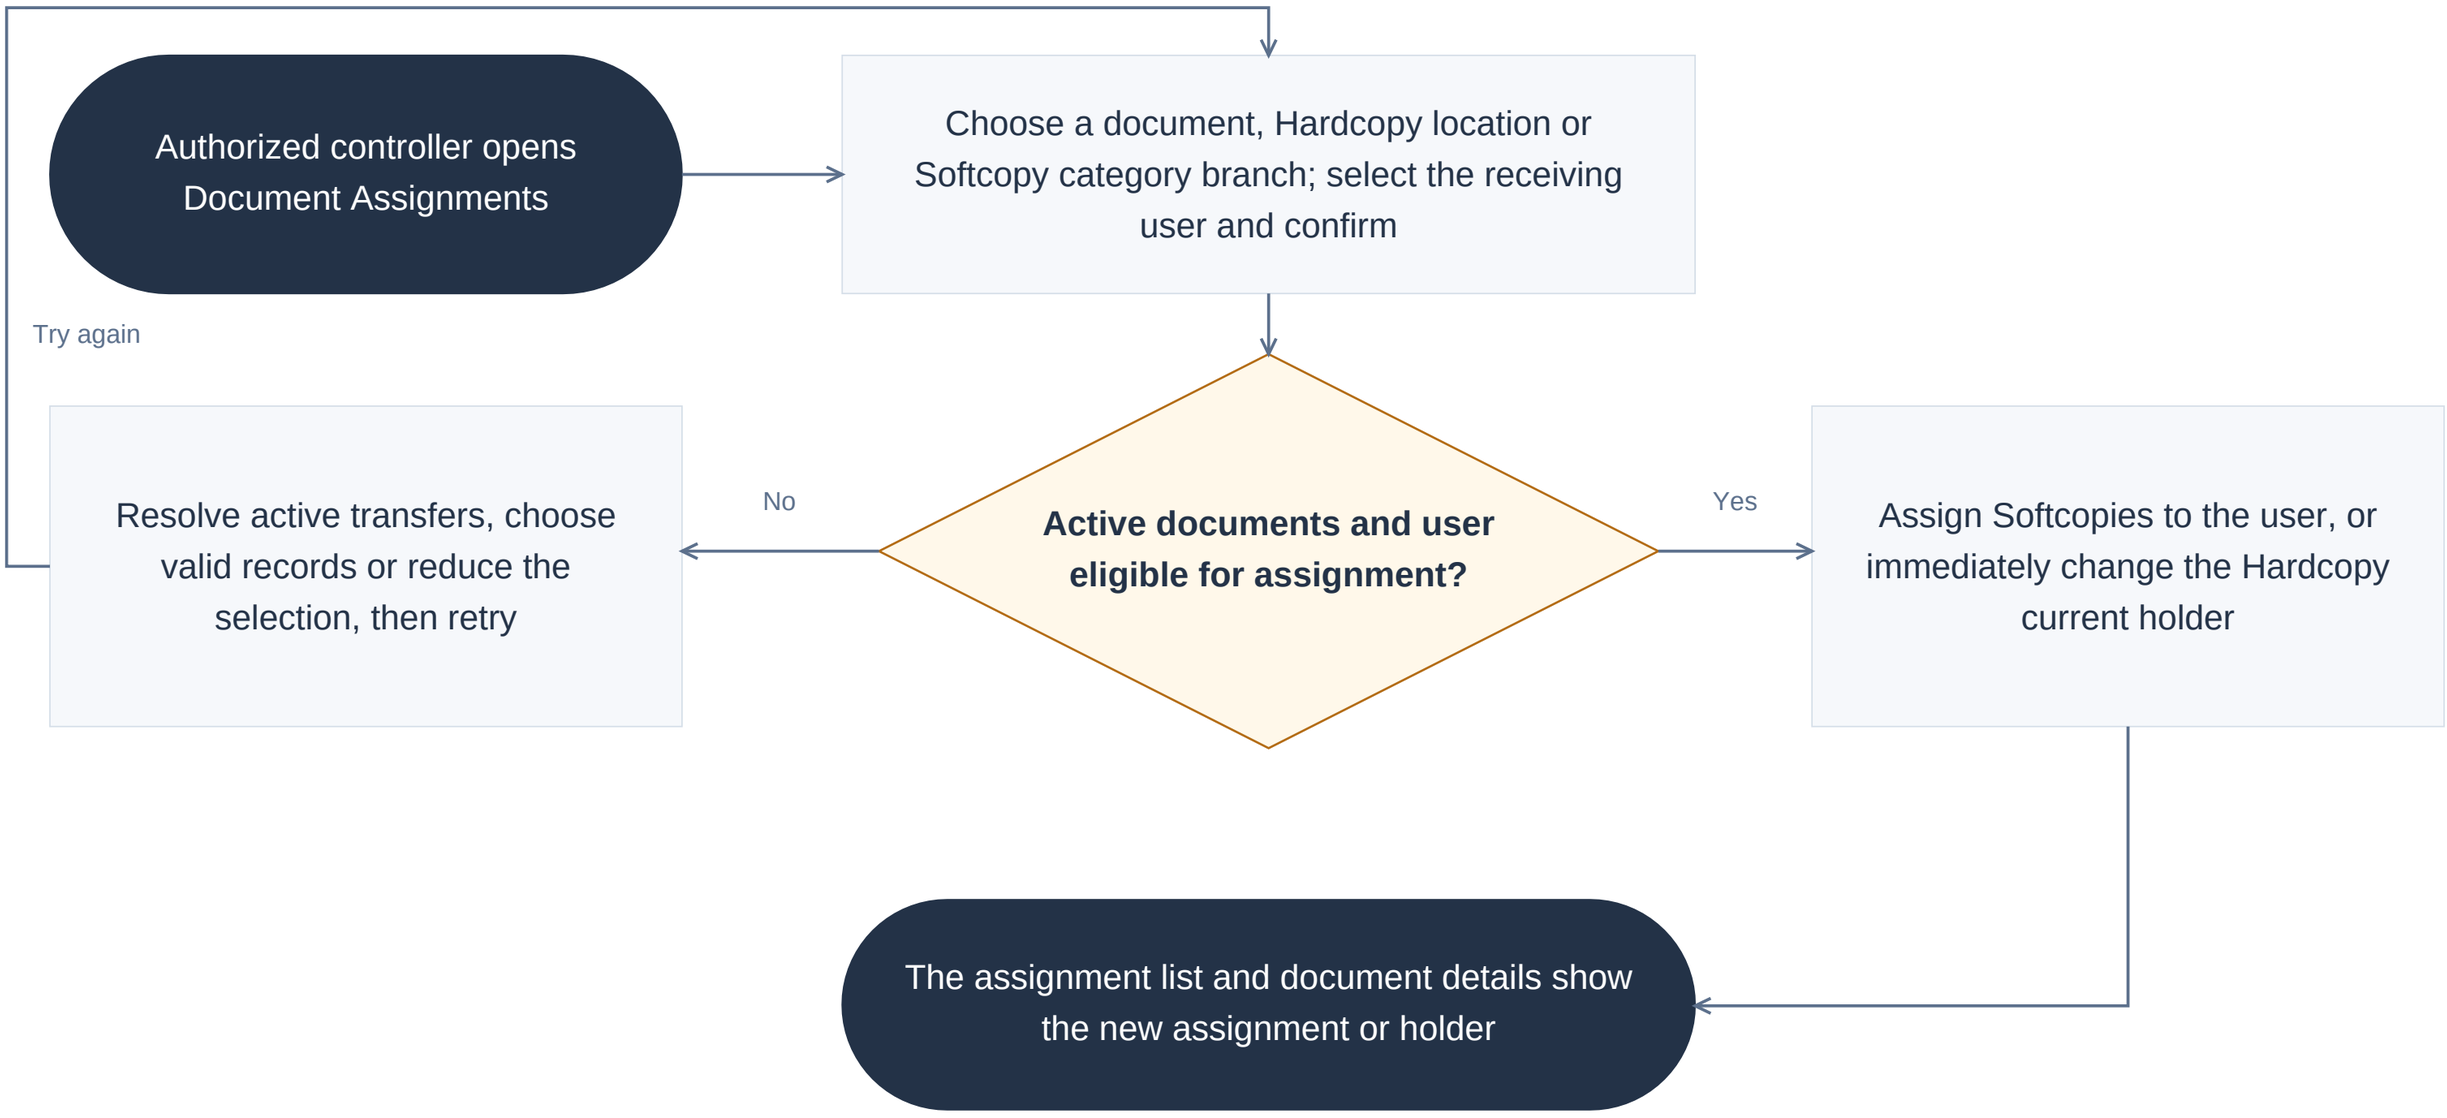

Local route checked 5 Nov 2026: Plant Manager, Document Control Officer, Requester confirms. Softcopy disposal requests are unavailable.

Choose Shred, Scratch or Other. Other requires a description of up to 250 characters.

Approved Hardcopy disposal clears Location and personal grants. External disposal records status and history; stored files remain.

Assign documents directly

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

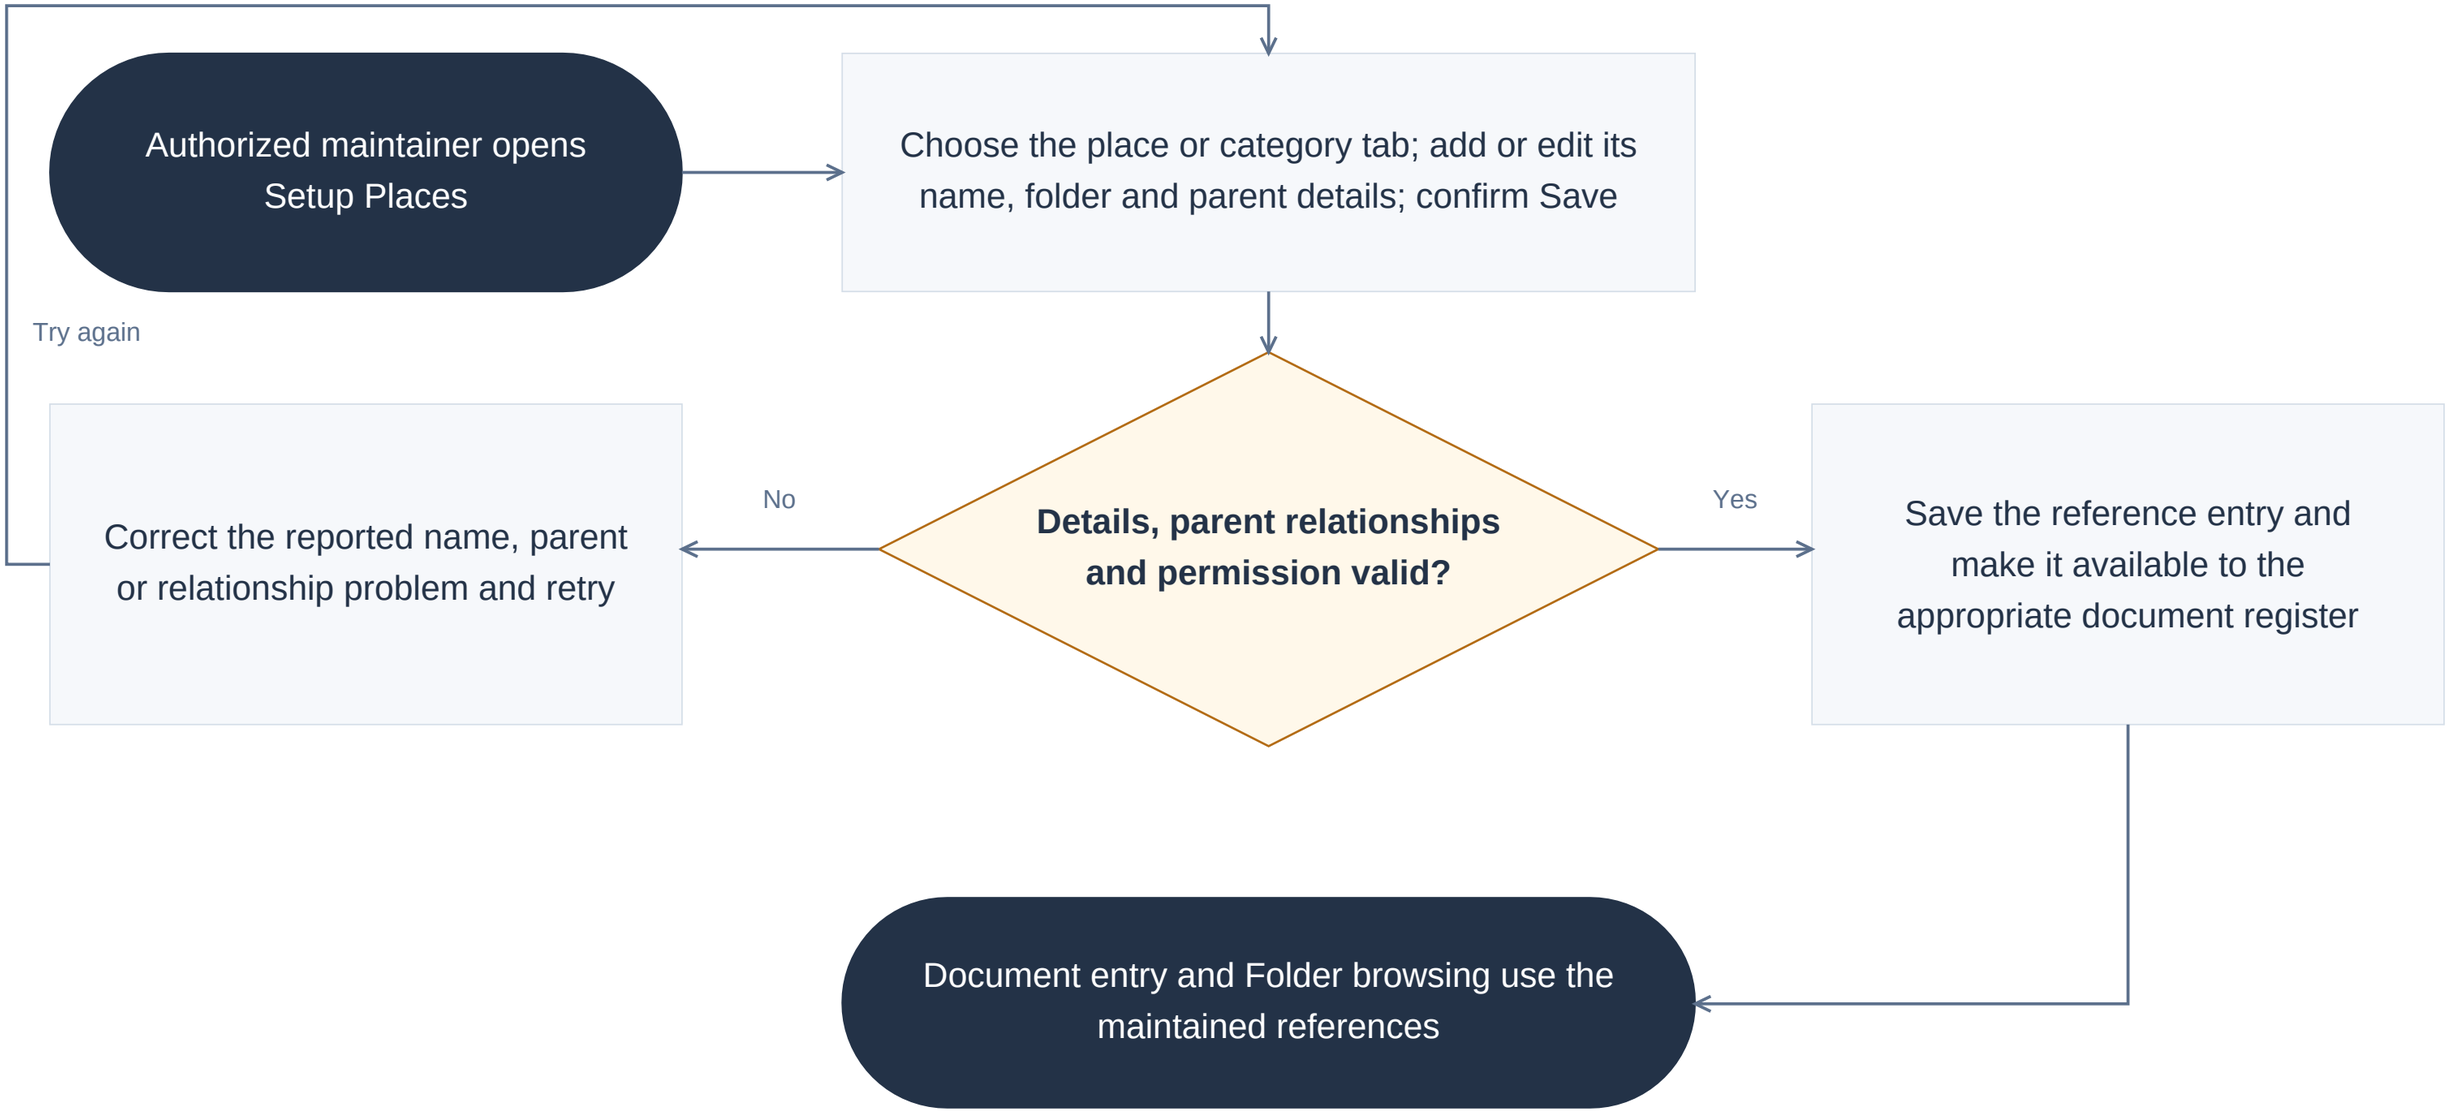

Softcopy category assignment includes its subcategories. Location assignment includes all active Hardcopies stored there.

Bulk assignment supports up to 2,000 active documents. An active Hardcopy transfer blocks reassignment.

Direct assignment needs no approval, Dispatch or Accept. It changes records without moving documents or granting personal access.

Maintain places and category folders

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

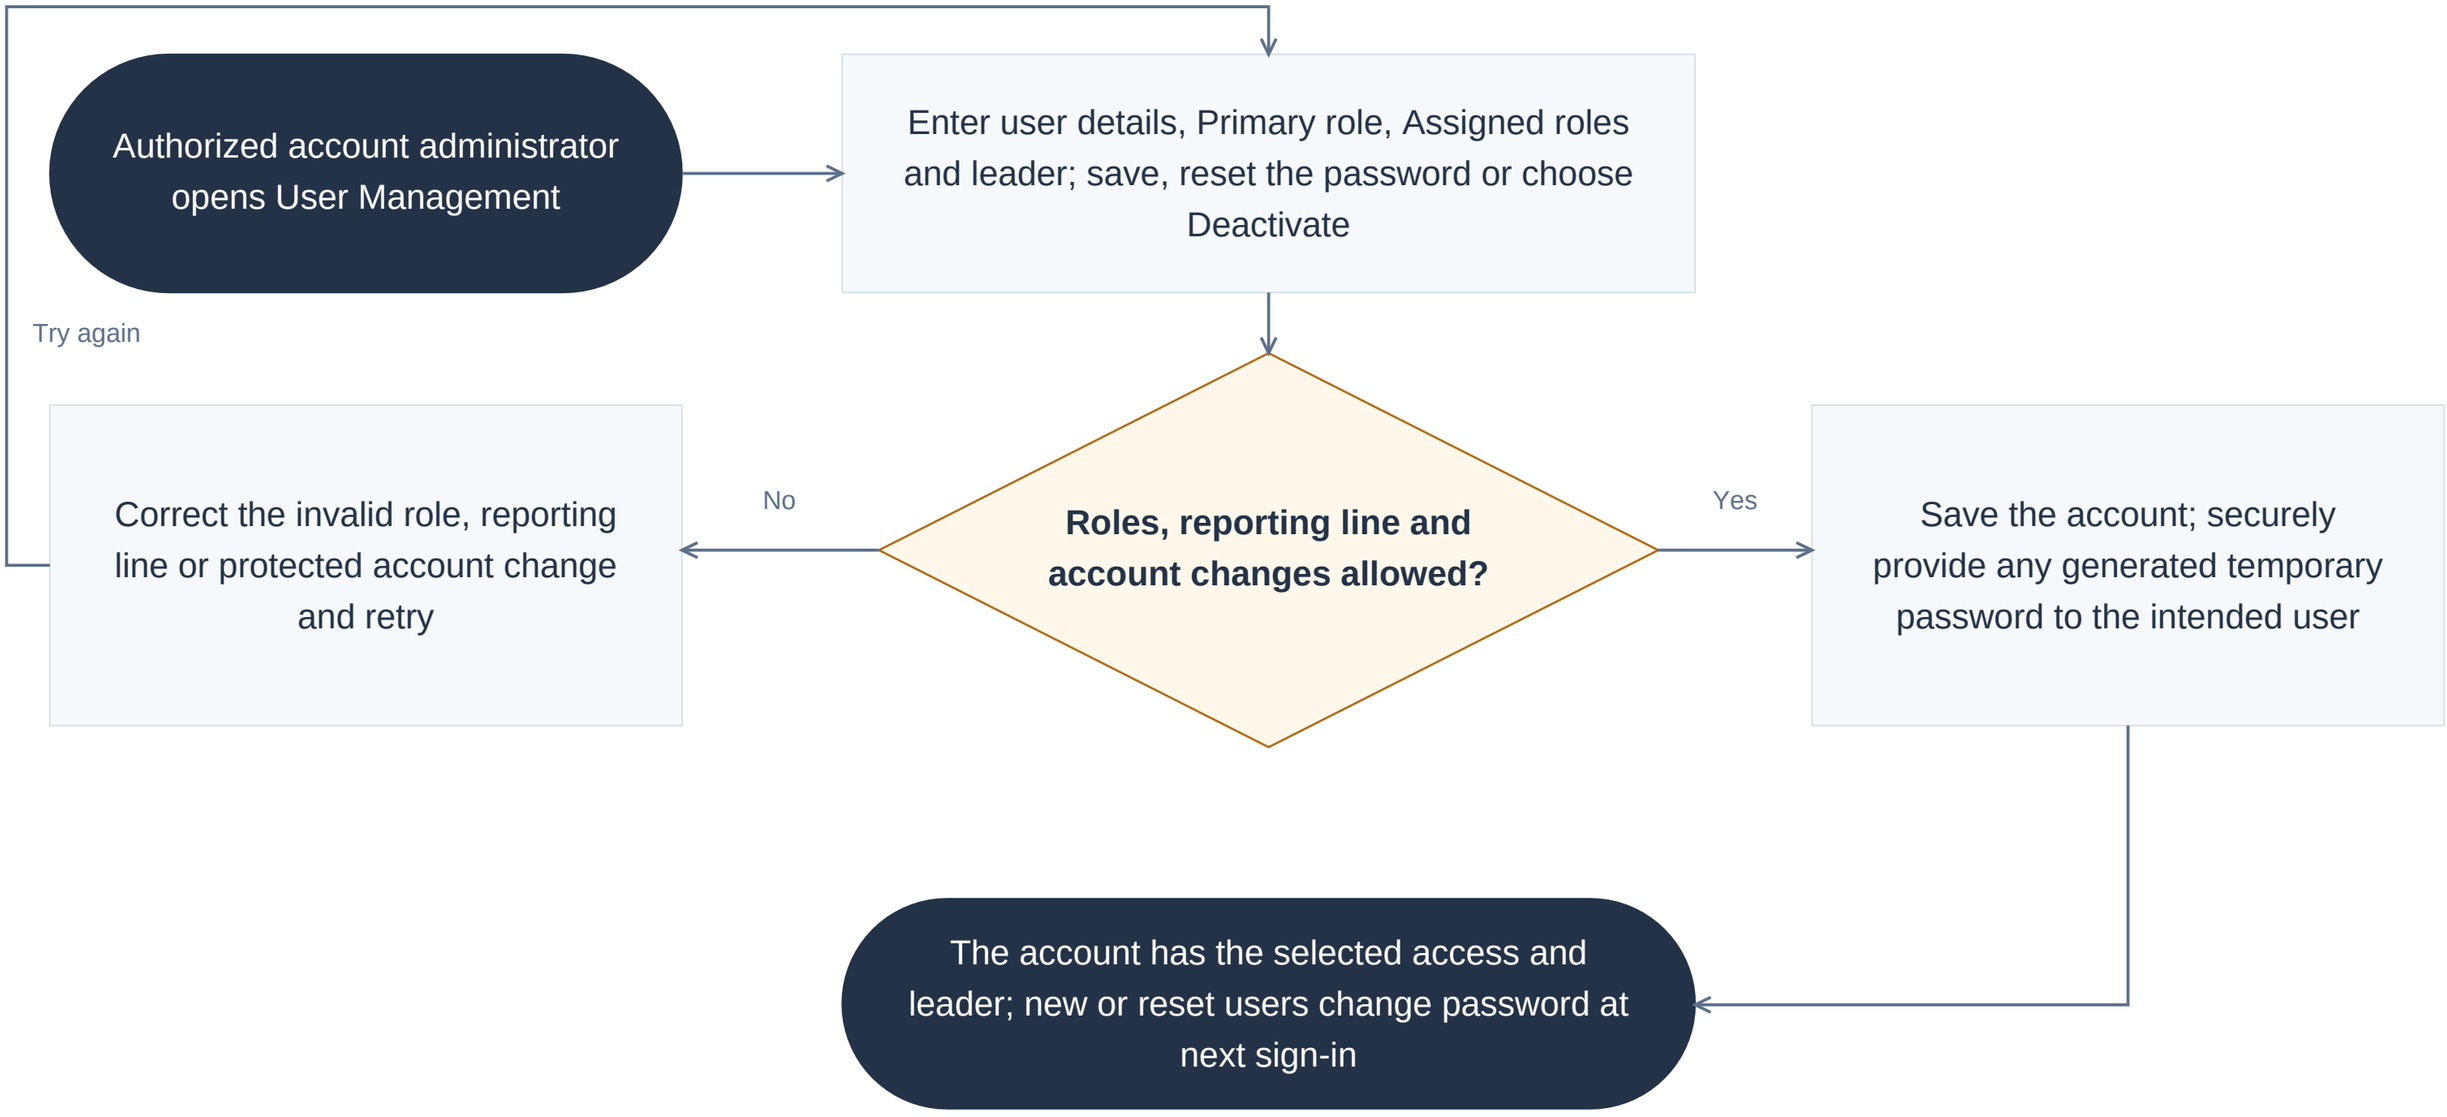

Areas, Specifics, optional Assets and Locations describe Hardcopy storage. Maintain their valid parent relationships.

Softcopy Categories and External Categories are separate trees. Categories can contain subcategories.

Deactivate an entry to stop new selection while retaining historical links; existing relationships can restrict changes.

Create, update or deactivate a user account

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

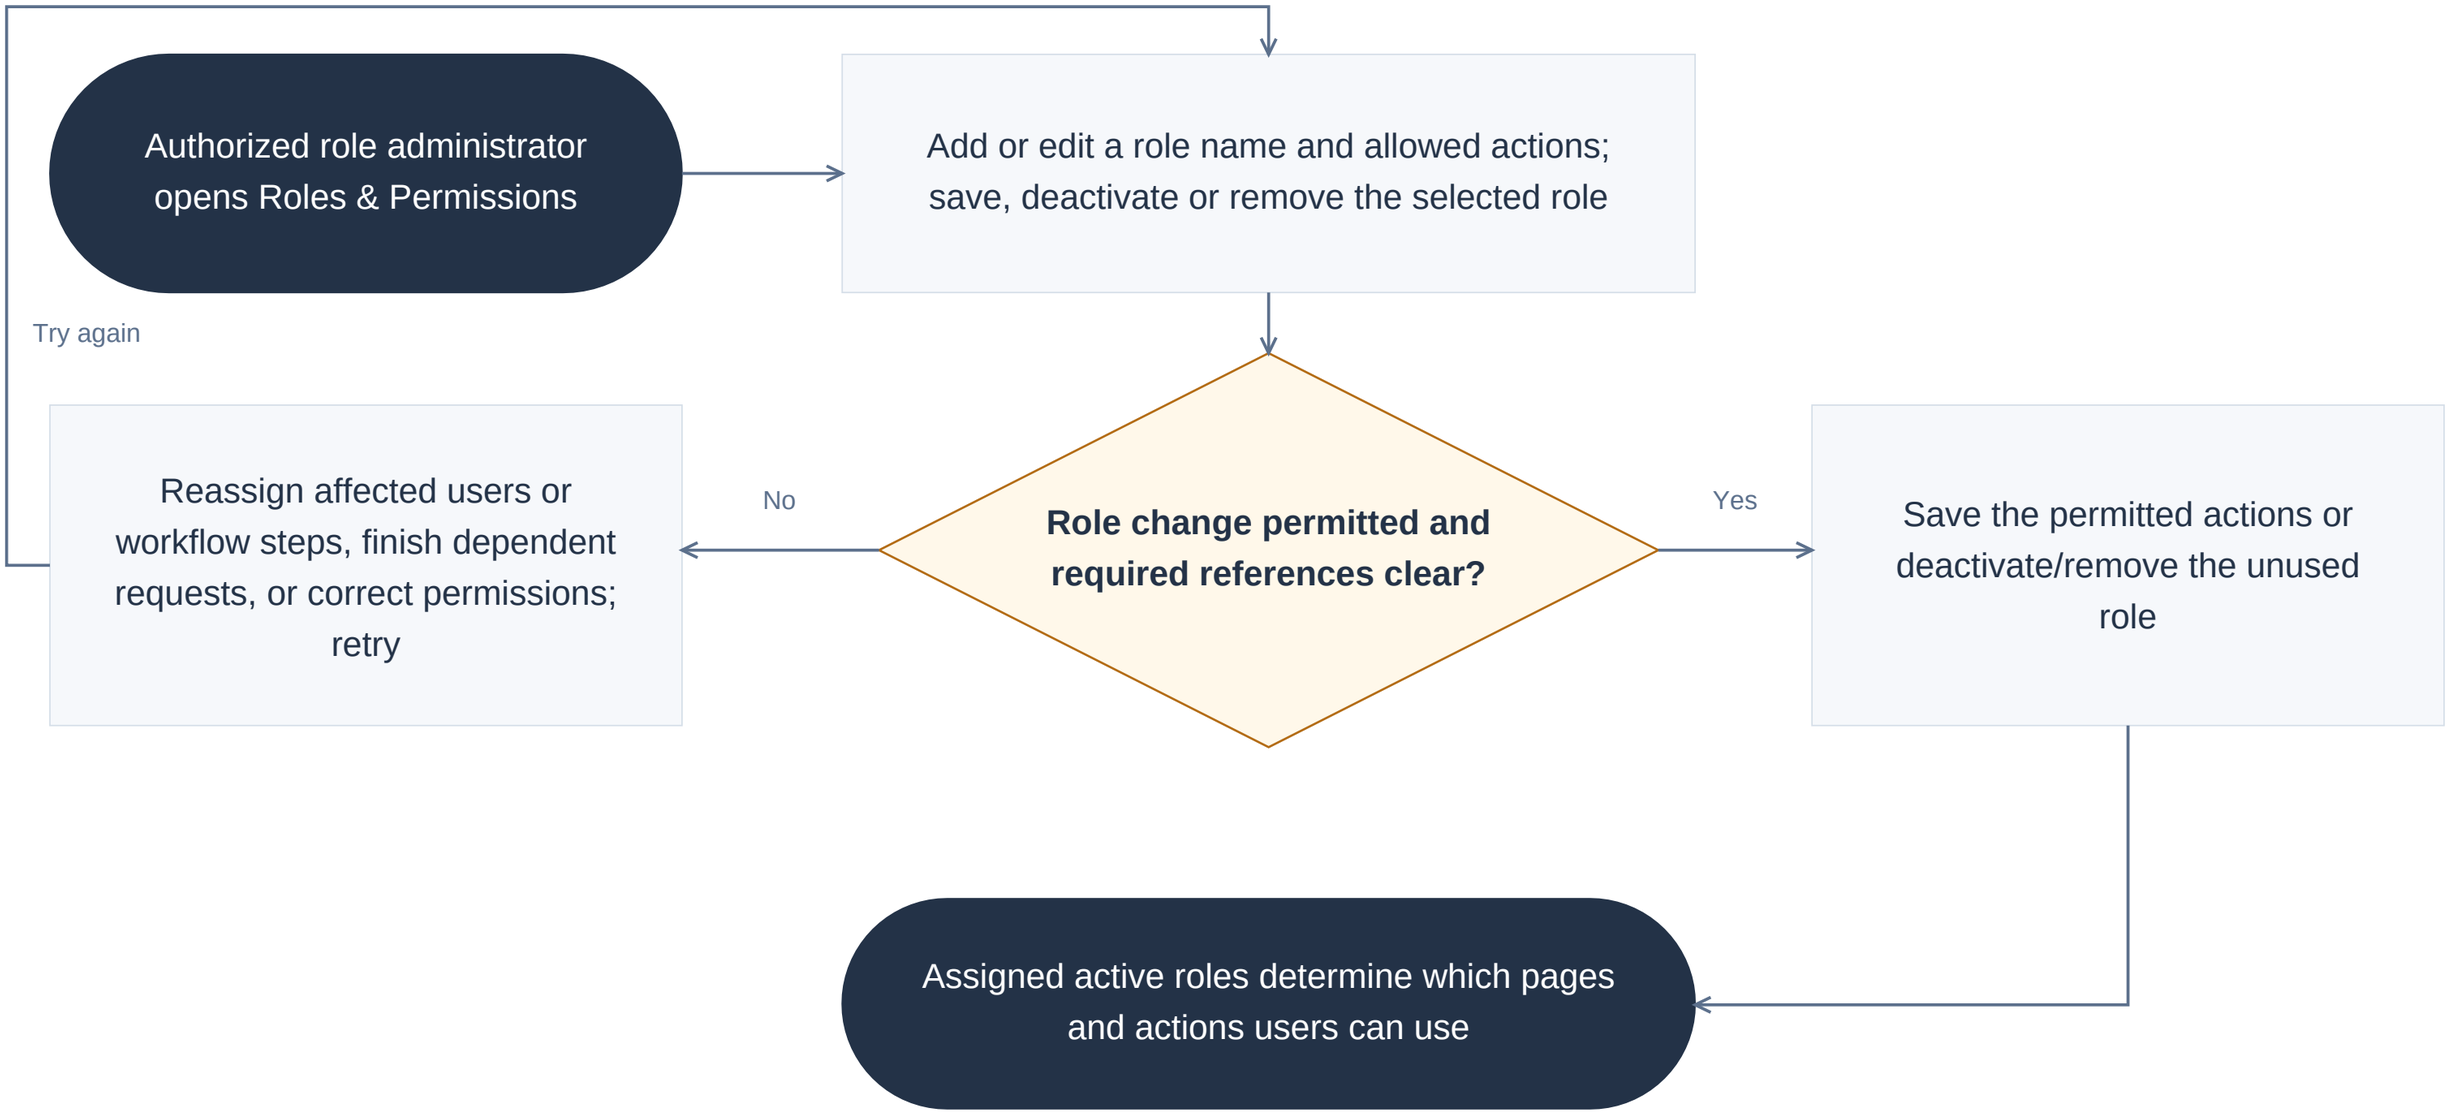

Primary and assigned active roles combine permissions. The leader receives steps configured as Requester's leader.

Users cannot deactivate themselves or change their own roles. The final active Administrator cannot be removed.

Account and role changes can require a fresh sign-in. Assigned Documents requires both user-view and direct-assignment permission.

Maintain roles and permissions

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

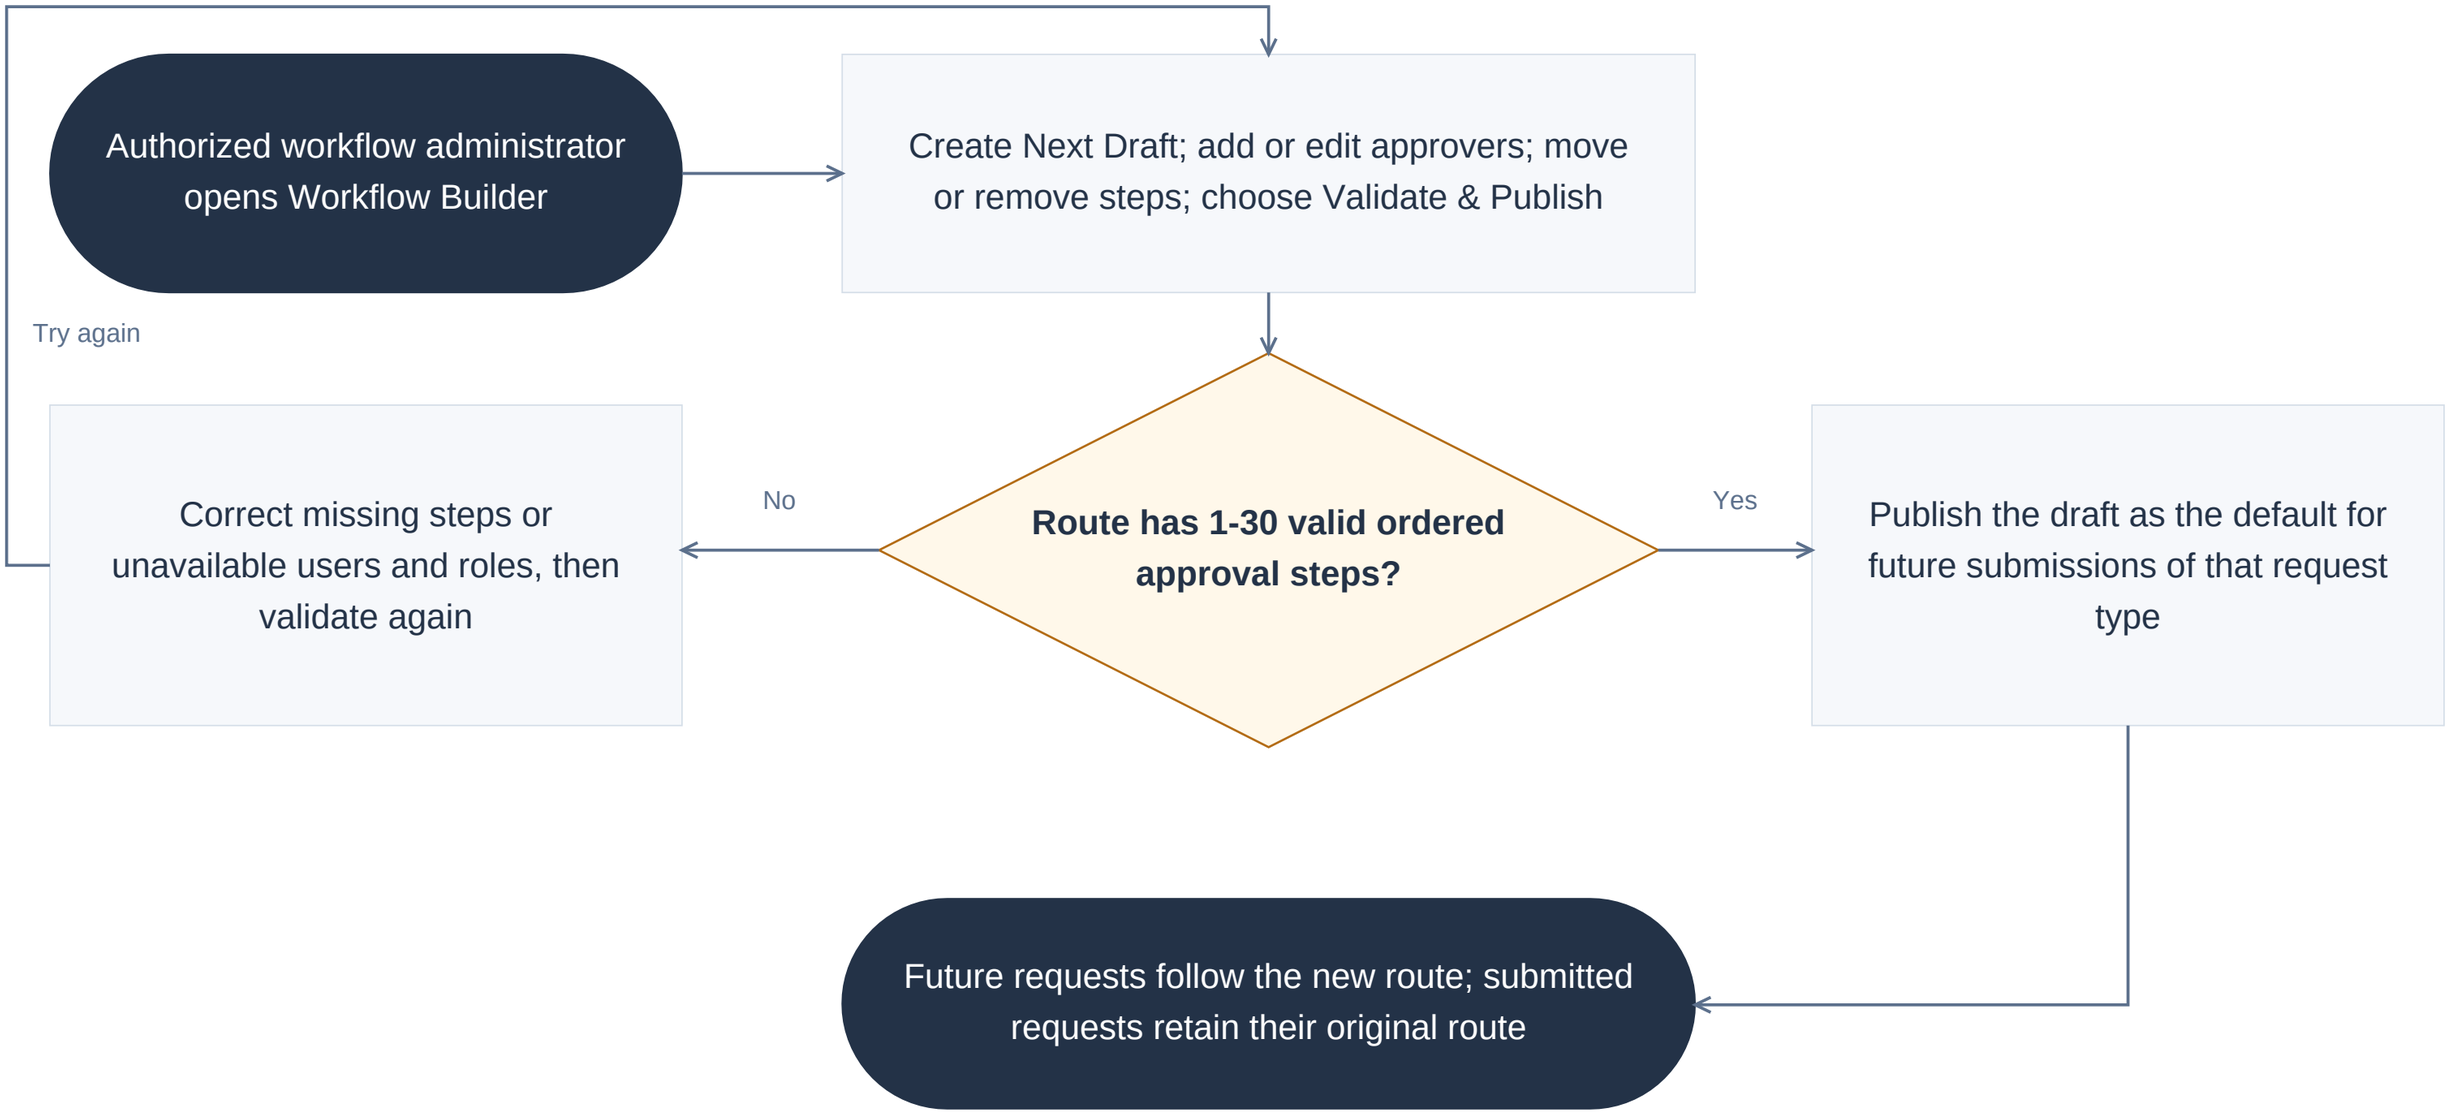

Supplied roles: Administrator, Document Control Officer, Plant Manager, Internal Auditor and Staff. Custom roles can be added.

Administrator privileges are fixed. Other roles can be configured; an administrator cannot delegate actions they lack.

A role cannot be deactivated or removed while assigned to users, used by current workflows or needed by unfinished requests.

Publish an approval route

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

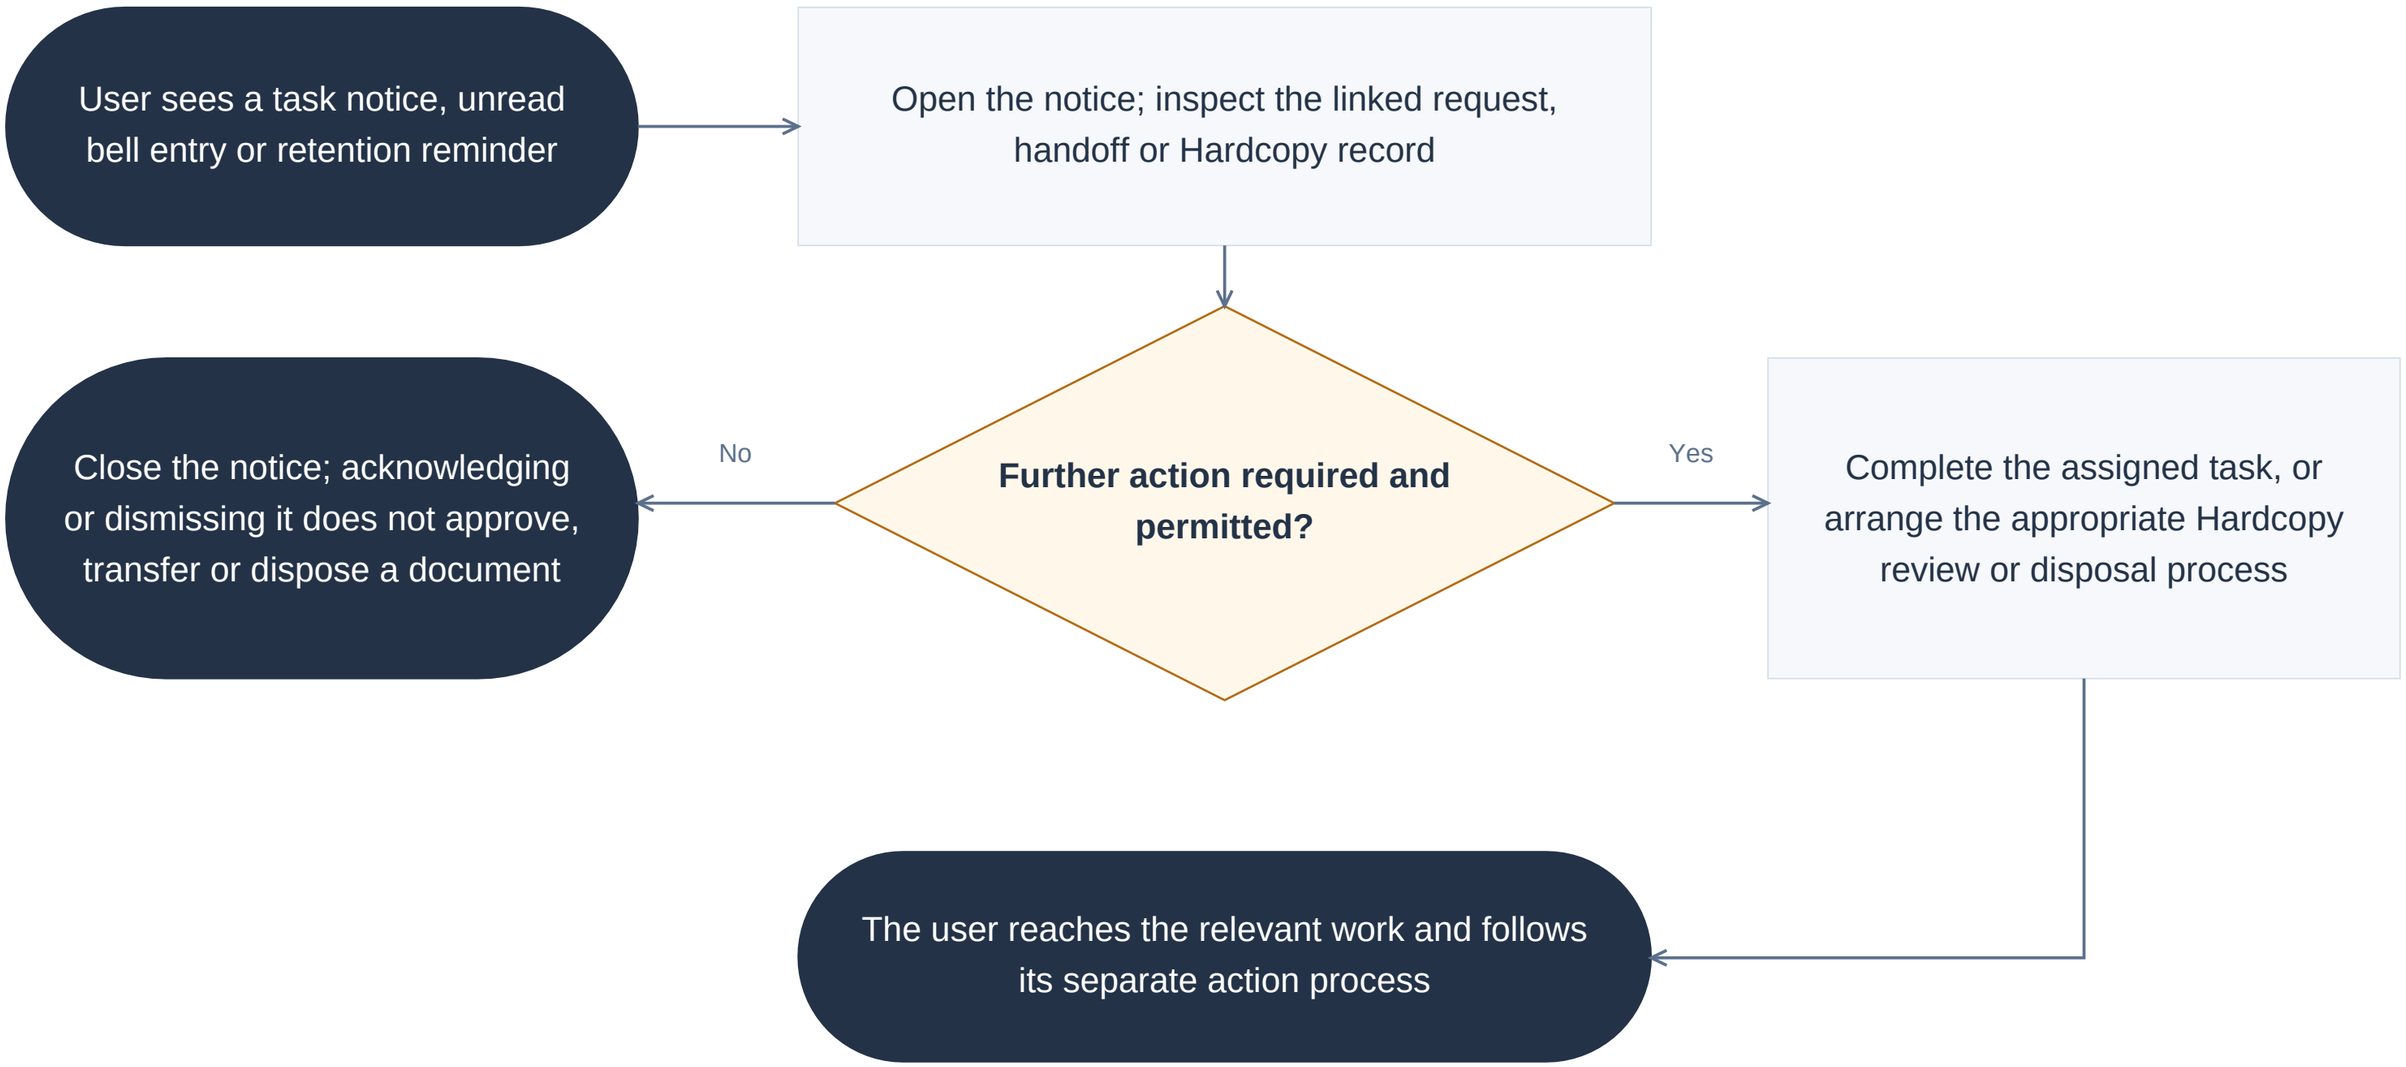

Approvers can be a specific user, any active member of a role, the Requester's leader or the Requester account.

Published versions are read-only. Use Create Next Draft, or Start First Draft when no version exists.

Only one draft per workflow is available. The request types are predefined; configuring a route does not enable retired request types.

Respond to task and retention notices

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

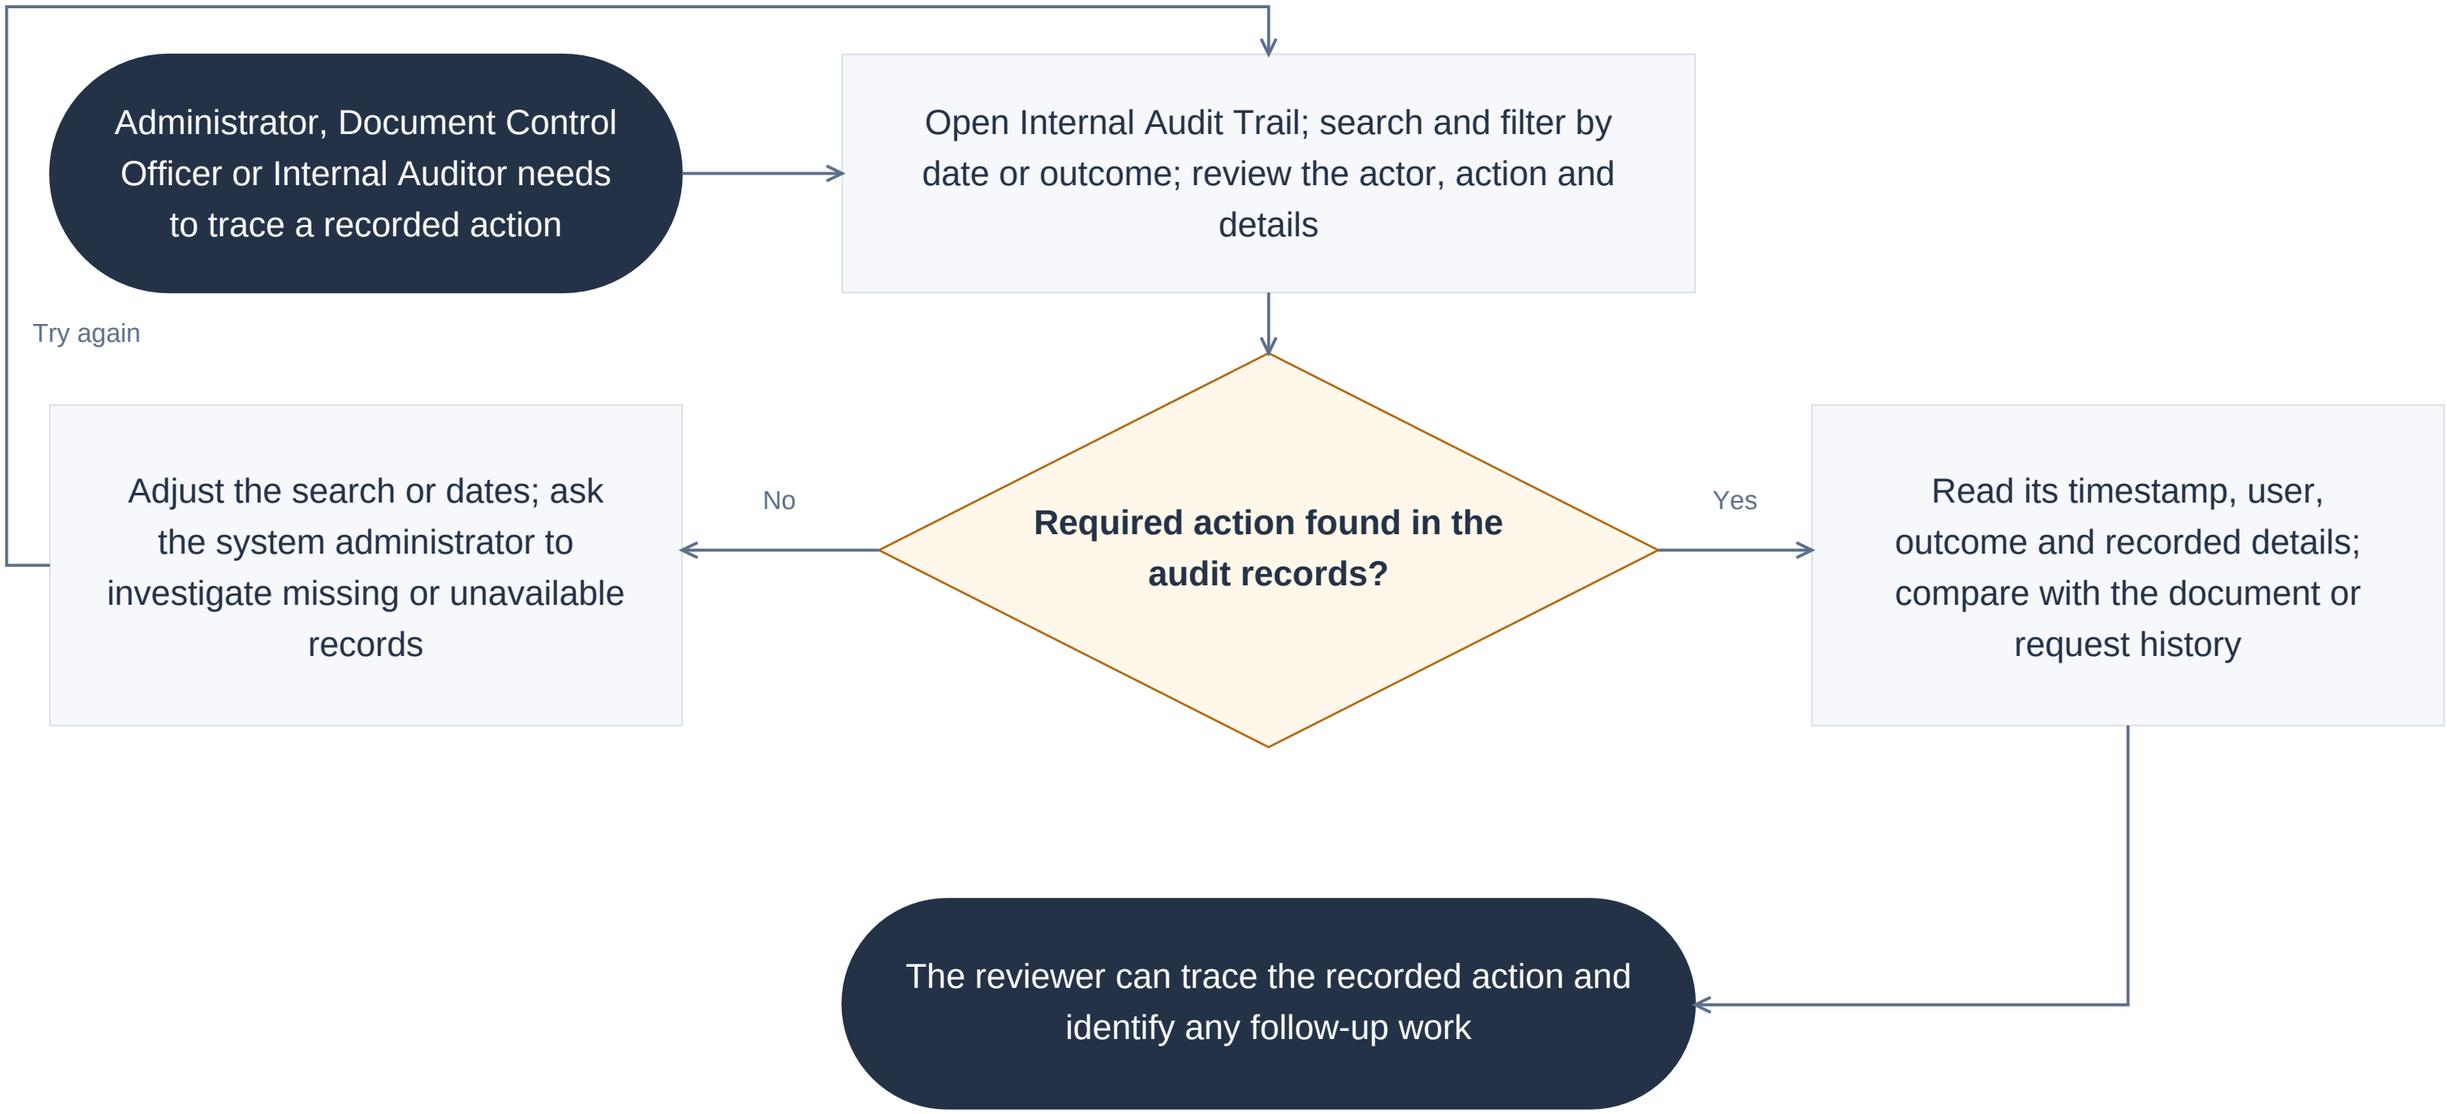

Selecting an unread bell entry acknowledges that entry. Opening the panel does not mark every entry read.

Retention reminders concern visible active Hardcopies with retention enabled and an end date today or earlier, using Manila dates.

Retention reminders are shown once per document and end date in the browser session; dismissing one leaves the record unchanged.

Review the Internal Audit Trail

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

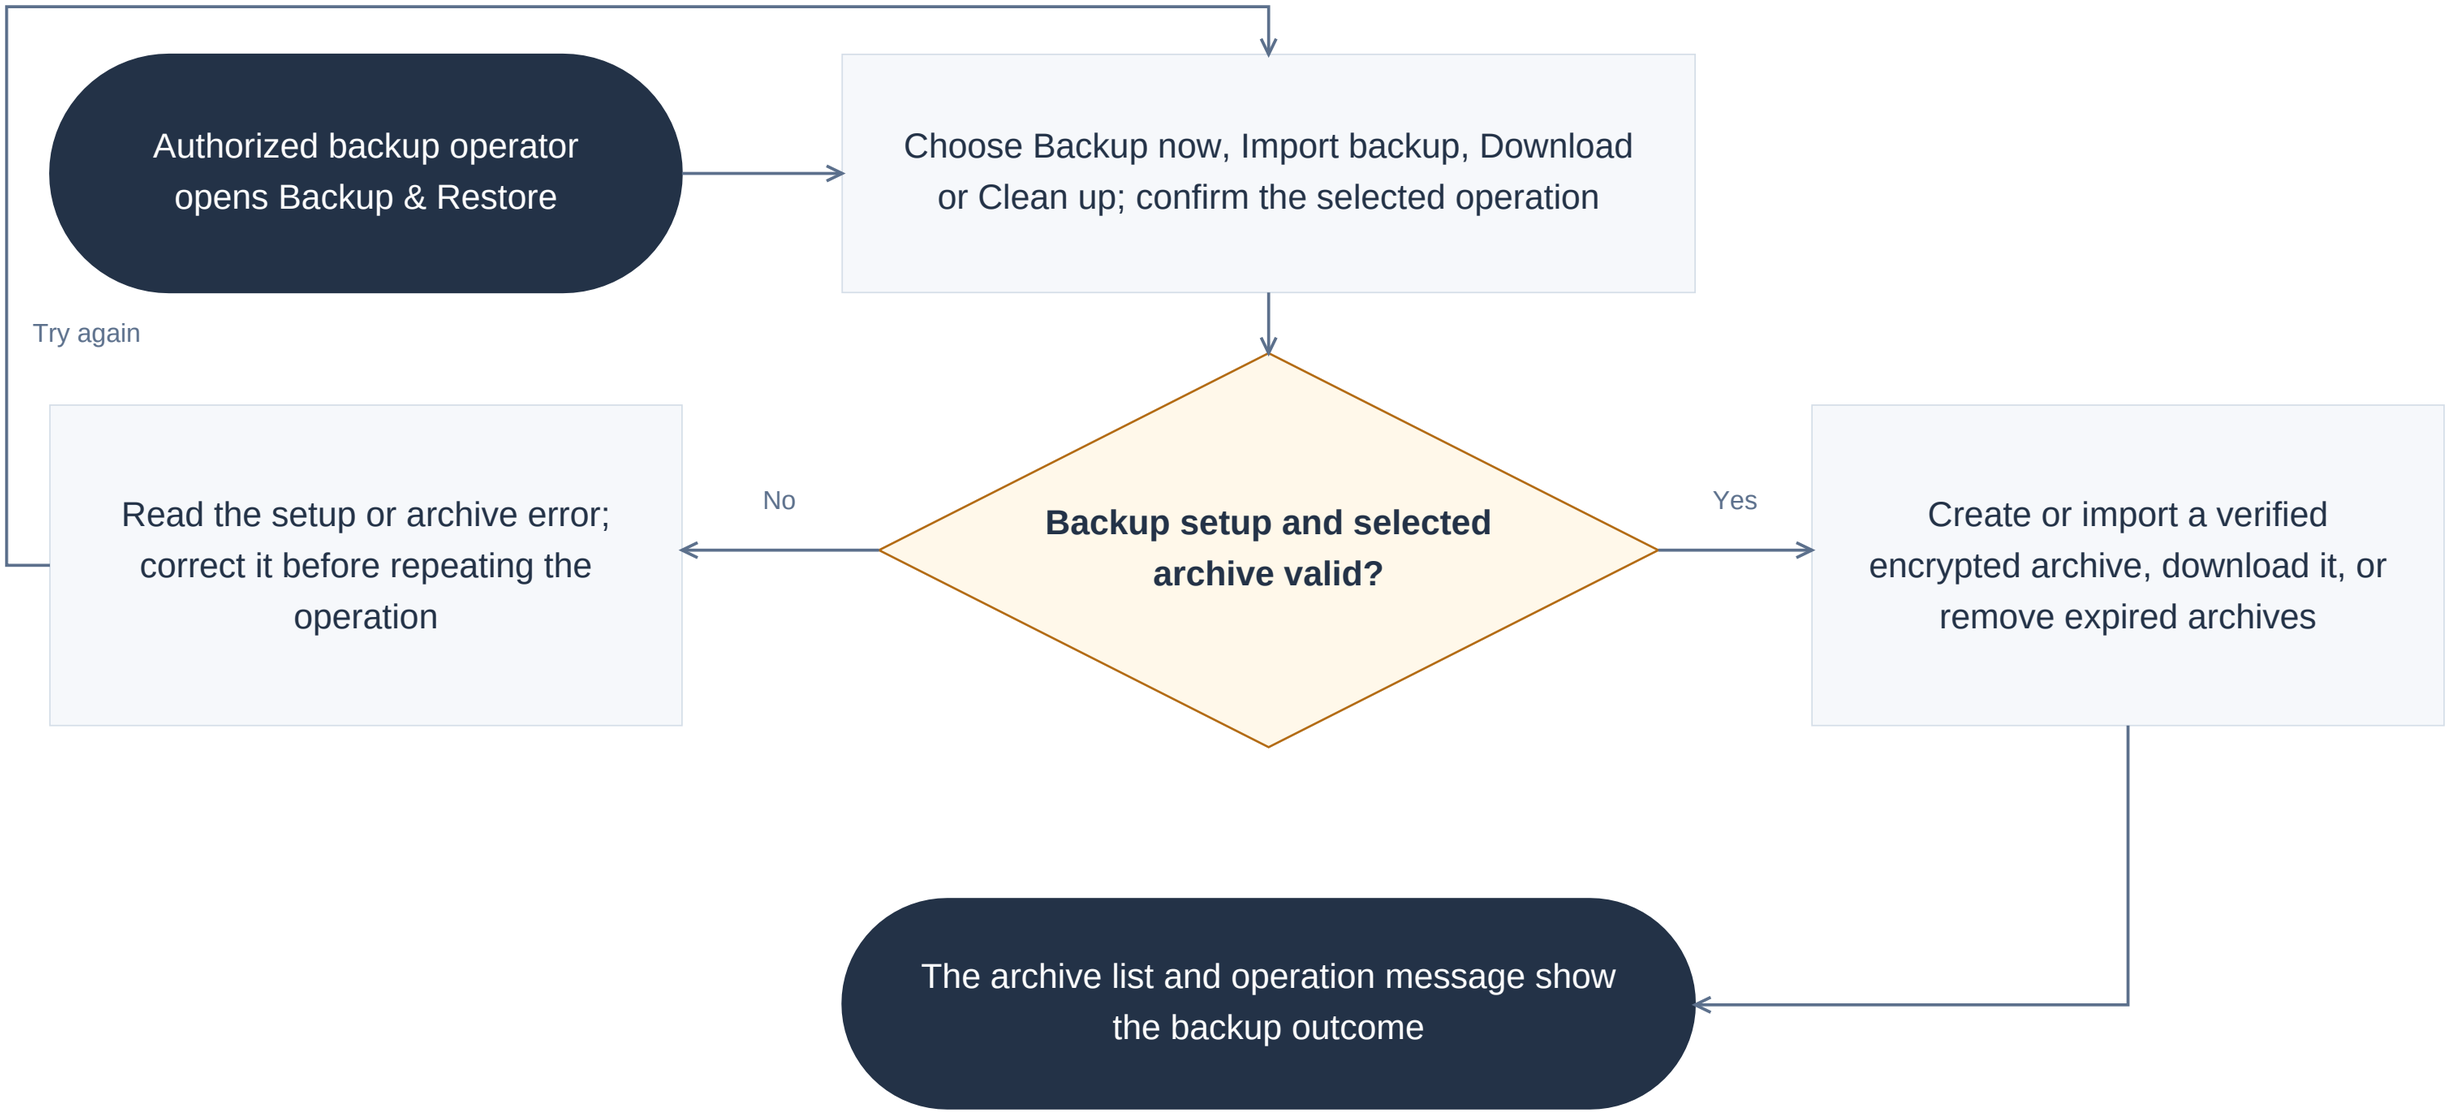

The supplied Administrator, Document Control Officer and Internal Auditor roles can view the audit trail; custom grants may differ.

Use success or failed outcomes to narrow the list. Audit review does not change a document or reverse an approval.

Document details and request approval history provide related context for the recorded action.

Create and manage backup archives

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

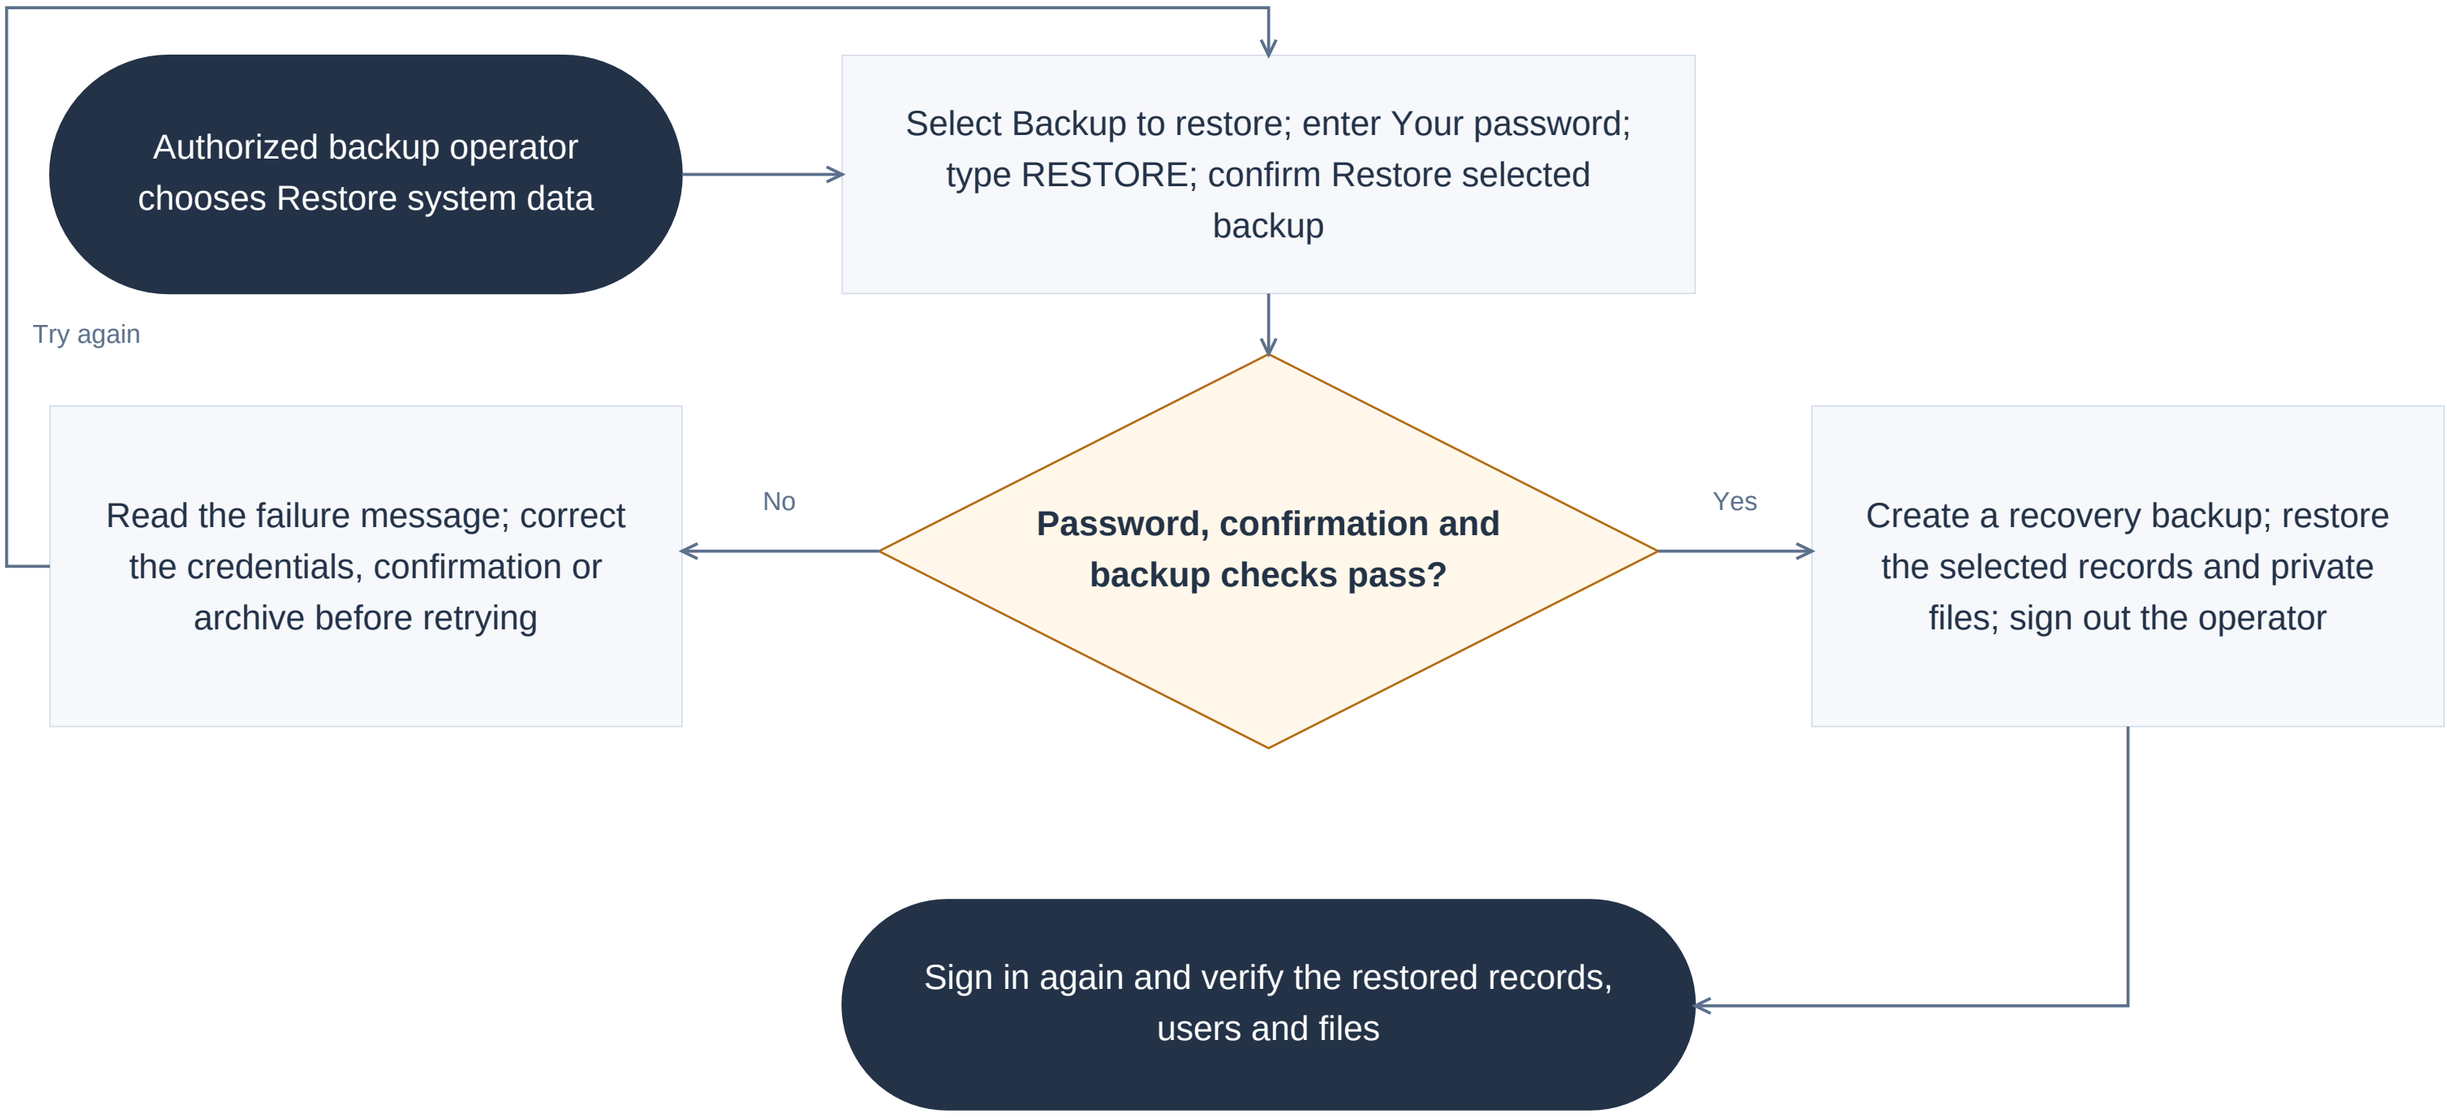

Viewing backups and managing or downloading them require different permissions. Check the success message and resulting archive.

The displayed daily target is 5:00 PM Asia/Manila. Automatic backup runs require separate administrator setup and verification.

Clean up removes expired backup and log archives under the configured retention rules. Import verifies the supplied backup ZIP.

Restore system records and private files

Start at the upper left. Follow the arrows and the Yes or No answer at the question.

Restore replaces live records and private files. Normal use is temporarily blocked during the maintenance operation.

A recovery backup is created before replacement. Keep the selected backup and recovery archive available for follow-up checks.

Application code recovery is an offline maintenance task; it is not performed by the Restore system data button.
