PK DOCUMENT TRACKING SYSTEM

Data Flow Diagram

Roles, information and records

Understand who provides information, how it moves through each activity, and where the result is recorded.

SEE THE WHOLE SYSTEM

IN THIS GUIDE

01 All five roles

02 Document information

03 Approvals and tracking

Find your task

Choose a topic in the contents.

Follow the page

Read the steps, arrows or screen example.

Check the result

Review the outcome and reminders.

Contents

Choose a topic to jump to its page in the PDF. Page numbers also help you find it in the editable copy.

People and their information 3

How information moves through PK DTS 4

2. Physical documents and storage 5

3. Softcopy documents and files 6

4. External documents and files 7

5. Requests and approval decisions 8

6. Transfer, dispatch and receipt 9

7. Document access and assignment 10

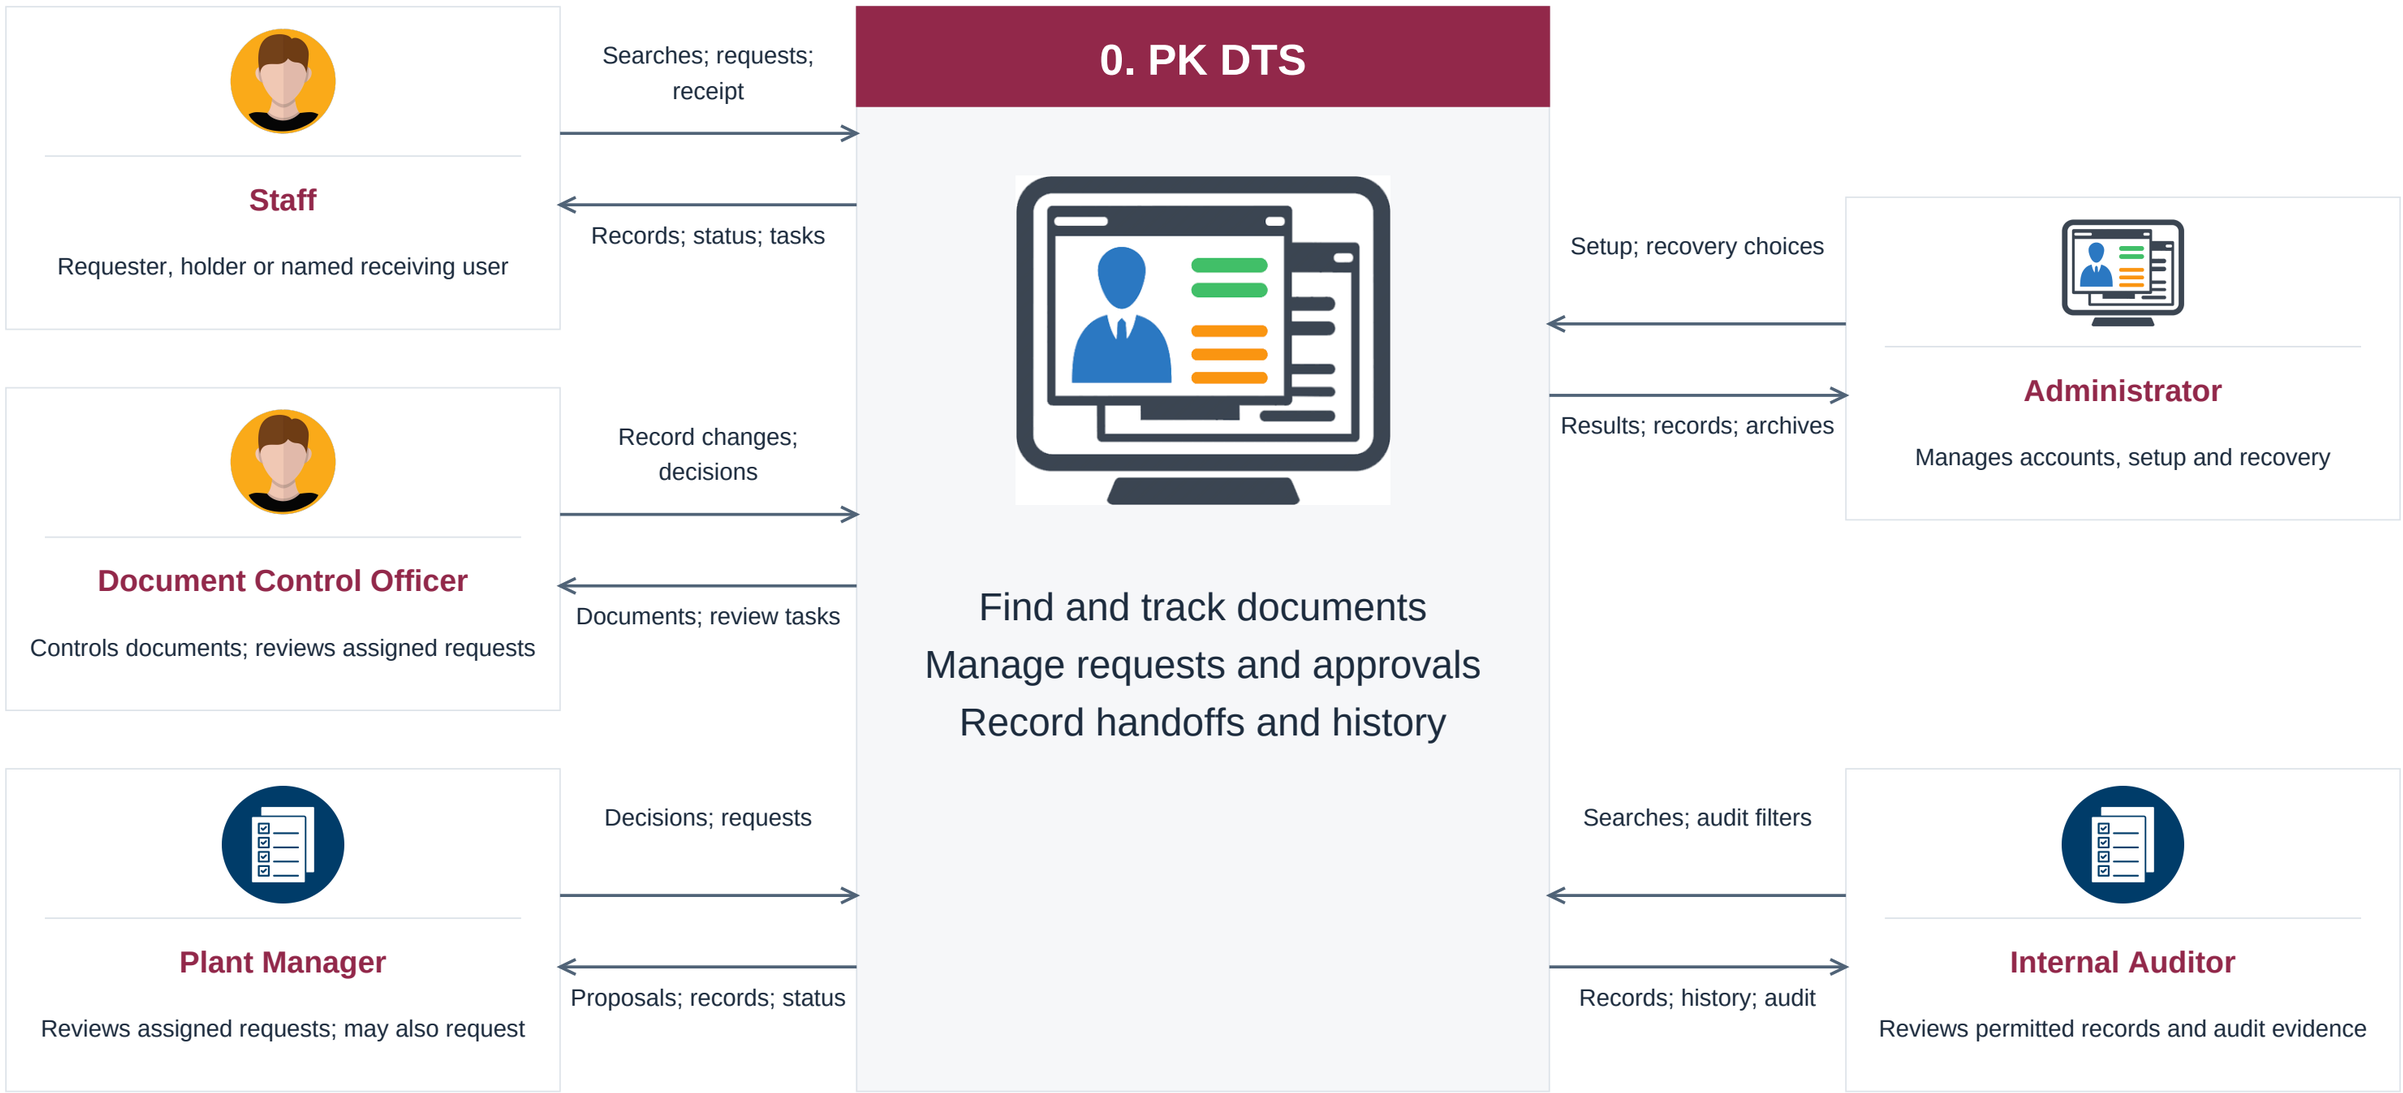

8. Disposal records 11

9. Accounts, places and approval setup 12

10-11. Notices, history and backups 13

People and their information

See what each of the five standard roles provides to PK DTS and receives in return.

These are the five standard roles; custom roles are allowed. Requester, requester's leader and receiving user describe duties, not extra roles.

How information moves through PK DTS

Read each row from left to right: information comes in, an activity takes place, and a result is recorded or shared.

FROM	INFORMATION	ACTIVITY	RESULT	TO
User	Sign-in details and search terms	**1. Sign in and find records**	Sign-in result; permitted records	User
Document controller	Document details and files	**2-4. Maintain document records**	Saved documents and changes	Document registers
Request participants	Proposal, file and decisions	**5. Review document requests**	Request progress and decisions	Request records
Document user	Handoff, access or disposal details	**6-8. Track holders and document use**	Holder, access or disposal result	Document tracking records
Authorized setup user	Setup and recovery choices	**9-11. Manage system settings**	Settings, notices, audit and backups	System records

Boxes show people or activities. Open-ended boxes show saved records. Arrow labels explain what information moves between them.

2. Physical documents and storage

Register and edit hardcopies directly. New hardcopy creation and update requests are unavailable.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Hardcopy record editor	Title, holder and storage	**2.1 Register or edit hardcopy**	Record and change history	Hardcopy register
Reference records	Active storage choices and holder	**2.1 Check record details**	Save result or required correction	Hardcopy record editor
Hardcopy register	Holder, storage and status	**2.2 View hardcopy details**	Holder and storage details	Authorized document user
Hardcopy register	Retention start and end dates	**2.3 View retention status**	Days remaining; due; overdue	Authorized record reviewer
Handoff records	Approved move and receipt history	**2.2 View tracking history**	Release and receipt details	Authorized reviewer

Storage follows Area > Specific > optional Asset > Location. Retention dates remind you to review a document; they never dispose of it.

3. Softcopy documents and files

Direct changes take effect immediately. Requested changes take effect after final approval. Softcopy cancellation is unavailable.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Document controller	Title, category, pages and file	**3.1 Create or revise directly**	Current document and file	Softcopy records
Requester	Proposed details and file	**5. Save and route request**	Draft or submitted proposal	Request records
Request records	Approved creation or revision	**3.2 Publish approved change**	Current revision and file	Softcopy records
Softcopy records	Current file and user access	**3.3 Check file permission**	Download or print access	Authorized file user
Softcopy revision history	Revision details and changes	**3.4 View revision history**	Earlier revisions and changes	Authorized reviewer

New records use Softcopy Categories and automatic numbers; a series is optional. A revision keeps the same document number and adds a revision.

4. External documents and files

Documents from outside the organization use their own categories. Create or revise them directly, or request approval.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Document controller	Title, category, description and file	**4.1 Create or revise directly**	Current document and revision	External document records
Requester	Creation or revision proposal	**5. Save and route request**	Proposal and file for review	Request records
Request records	Approved creation or revision	**4.2 Publish approved change**	Current document and file	External document records
External Categories	Category and parent folder	**4.3 Browse external folders**	Permitted document list	Authorized document user
External document records	Current file and user access	**4.4 Check file permission**	Current file download	Authorized file user

Create and revise both need a new attachment. Revision numbers increase automatically. External documents have no retention dates; Download opens the current file.

5. Requests and approval decisions

The published approval route sets who reviews a request and in what order. PK DTS saves each decision.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Requester	Draft details, file and submission	**5.1 Check and submit request**	Submitted request and route	Request records
Published approval routes	Review order and requester's leader	**5.2 Assign the active review**	Proposal, review task and file	Assigned approver
Assigned approver	Approve, Return or Reject; remarks	**5.3 Record the decision**	Decision and current stage	Request records
Request records	First reviewer returns the request	**5.4 Show required corrections**	Request to correct and resubmit	Requester
Request records	Final approval and request details	**5.5 Apply approved action**	Document change or pending handoff	Document activity records

A later Return sends work to the previous approver. Reject ends the request. Resubmission keeps the route. Reading a notice makes no decision.

6. Transfer, dispatch and receipt

Approval prepares the handoff. Acceptance checks the document, holder and agreed storage before changing the holder and location.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Approved transfer request	Holder, recipient and destination	**6.1 Prepare physical handoff**	For Transfer handoff	Transfer tracking records
Original requester	Dispatch confirmation	**6.2 Record dispatch**	In Transit; dispatcher; time	Transfer tracking records
Named receiving user	Accept confirmation after receipt	**6.3 Check and record receipt**	Accepted; receiver; time	Transfer tracking records
Accepted transfer record	Recipient and approved storage	**6.4 Update holder and storage**	New holder and location	Hardcopy records
Transfer tracking records	Accepted receipt and completion	**6.5 View handoff result**	Receipt and updated tracking	Authorized tracking viewer

Only the original requester can Dispatch; only the named receiver can Accept. A holder change removes the previous holder's personal hardcopy access grants.

7. Document access and assignment

Access allows document use. Assignment adds a softcopy assignee or changes a hardcopy holder. A transfer records the physical handoff.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Requester	Reason for access and expiry date	**5. Review access request**	Approved access request	Request records
Approved access request	Requester, document and expiry	**7.1 Grant temporary access**	Personal access until expiry	Document access records
Approved assignment request	Requester and selected document	**7.2 Apply assignment**	New assignee or holder	Document assignment records
Assignment controller	Document, Location or category; user	**7.3 Assign documents directly**	Updated assignees or holders	Document assignment records
Document permission records	Current access and permissions	**7.4 Show permitted documents**	Permitted records and actions	Document user

Request Hardcopy or Softcopy access or assignment for yourself. Hardcopy assignment keeps storage unchanged; direct assignment checks for active transfers.

8. Disposal records

Disposal limits document use and saves the reason. Follow the organization's separate procedure for physically disposing of the document.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Authorized document user	Document and disposal reason	**8.1 Dispose directly**	Disposed status and history	Document registers
Requester	Hardcopy or External disposal details	**5. Review disposal request**	Approved disposal request	Request records
Approved disposal request	Hardcopy and disposal method	**8.2 Dispose approved hardcopy**	Disposed; Location cleared	Hardcopy records
Approved disposal request	External document and method	**8.3 Dispose approved external**	Disposed status and history	External document records
Disposal history	Method, responsible person and date	**8.4 View disposal result**	Disposal details and history	Authorized reviewer

Direct hardcopy disposal keeps Location and personal access grants. Approved disposal requests clear Location and remove those grants.

9. Accounts, places and approval setup

Authorized staff maintain accounts, roles, places, categories and approval routes. A user receives the permissions of all their active roles.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Account administrator	Account, roles, leader or password reset	**9.1 Maintain user accounts**	Account and role membership	User accounts
Role administrator	Role name and permitted actions	**9.2 Maintain roles and permissions**	Permitted actions by active role	Role permissions
Setup maintainer	Places and category folders	**9.3 Maintain places and categories**	Storage and category structure	Reference records
Approval-route administrator	Review order and approvers	**9.4 Check and publish route**	Default route for new requests	Published approval routes
User accounts	Active roles and requester's leader	**9.5 Identify assigned reviewer**	Account, role or leader assignment	Assigned approver

Document Control Officers do not manage users, roles, workflows or backups by default. Leader and receiver duties can belong to any permitted role.

10-11. Notices, history and backups

Notices point to work. Audit records show past actions. Automatic backups need administrator setup and a recent successful run.

FROM	INFORMATION	ACTIVITY	RESULT	TO
Request tracking records	Assigned work and progress	**10.1 Show task notices**	Notice and link to work	Assigned user
Hardcopy register	Visible hardcopy due dates	**10.2 Show retention reminder**	Document review reminder	Authorized document user
Audit records	Person, action, date and result	**10.3 Review recorded actions**	Filtered audit results	Authorized audit reviewer
Authorized backup operator	Create, import or cleanup choice	**11.1 Check and manage backups**	Validated backup and result	Backup archives
Authorized backup operator	Archive, password and confirmation	**11.2 Save recovery copy and restore**	Restored records and private files	System records and recovery copy

Reading a notice does not finish the task. Restore replaces current records and files, pauses normal use, then signs out the operator after success.
