PK DOCUMENT TRACKING SYSTEM

PROPOSED PROCESS FLOW

1. Prepare, save and submit a request

STEP 1

Choose a request action, enter its details and select Save Draft.

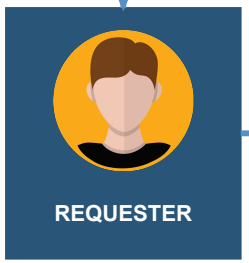

STEP 2

Validate fields, permission, ownership and active targets; save a valid draft.

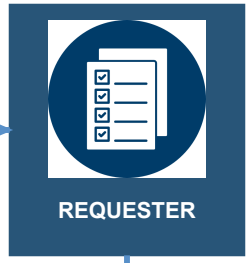

STEP 3

Reopen the saved draft; review the proposal and required Document File.

STEP 4

Submit the saved proposal for its configured approval route.

STEP 5

Capture the published route and version; activate the first step; mark Submitted.

NOTES

Create Softcopy and Revise Softcopy will require a Document File before submission: PDF, TXT, PNG, JPG/JPEG, DOCX or XLSX, up to 15 MB.

Only the requester will be allowed to edit a Draft or Returned proposal. Assignment and access requests will name the requester as recipient.

Request cancellation will be available only in Draft status. Only the owner will be allowed to delete an eligible Cancelled draft that has never been submitted.

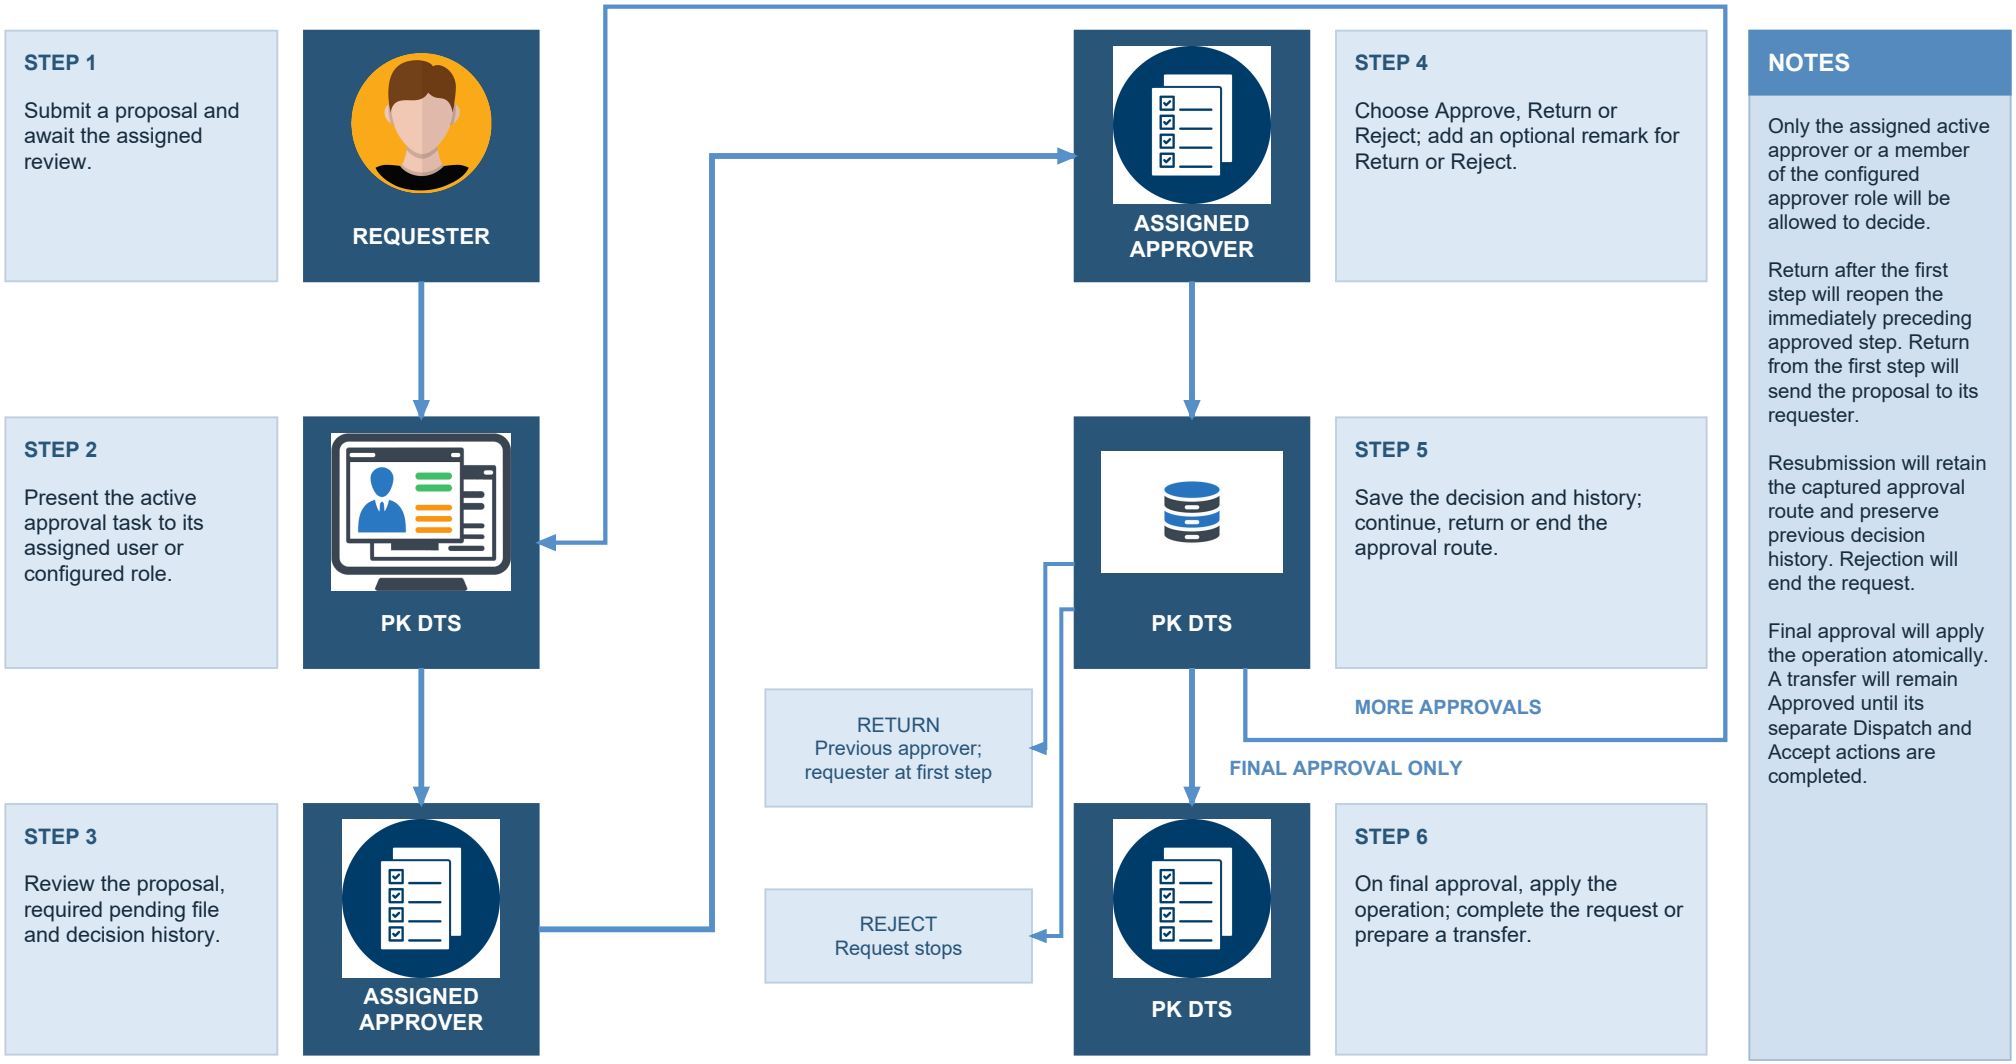

LEGEND / REQUEST COVERAGE

PK DTS: PK Document Tracking System.
Softcopy requests: Create, Revise and Cancel.
Hardcopy requests: Create and Update.
Other requests: Document Assignment, Access Grant, Hardcopy Transfer and Hardcopy Disposal.

PK DOCUMENT TRACKING SYSTEM

PROPOSED PROCESS FLOW

2. Review, decide and apply a request

NOTES

Only the assigned active approver or a member of the configured approver role will be allowed to decide.

Return after the first step will reopen the immediately preceding approved step. Return from the first step will send the proposal to its requester.

Resubmission will retain the captured approval route and preserve previous decision history. Rejection will end the request.

Final approval will apply the operation atomically. A transfer will remain Approved until its separate Dispatch and Accept actions are completed.

LEGEND / REQUEST COVERAGE

Approve: continue the configured route or apply the final operation.
Return: reopen the previous step or return to the requester.
Reject: end the approval route.

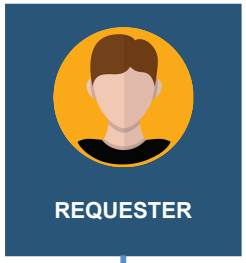

PK DOCUMENT TRACKING SYSTEM

PROPOSED PROCESS FLOW

3. Approve, dispatch and accept a hardcopy

STEP 1

Select an active hardcopy, recipient and different active destination; submit.

STEP 2

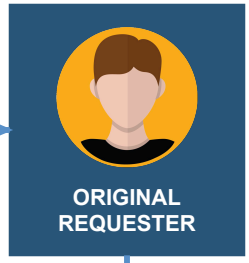

Review and approve the transfer through its configured approval route.

STEP 3

Prepare the For Transfer handoff; preserve the current holder and Location.

STEP 4

Dispatch the physical document and confirm its release.

STEP 5

Accept the in-transit document and confirm physical receipt.

STEP 6

Recheck the holder and approved destination; update custody and Location; complete the request.

NOTES

Only the original transfer requester will be allowed to Dispatch; this account may differ from the current holder. Only the designated recipient will be allowed to Accept.

Approval will prepare the handoff without moving custody. Dispatch will mark it In Transit; recipient acceptance will complete it.

Acceptance will require the active document, unchanged holder and approved active destination hierarchy. A failed check will preserve custody and location.

When custody changes to another user, acceptance will revoke the previous holder's personal hardcopy grants.

LEGEND / REQUEST COVERAGE

For Transfer: approved handoff awaiting Dispatch.
In Transit: dispatched document awaiting recipient acceptance.
Accepted / Completed: receipt and custody update recorded.

PK DOCUMENT TRACKING SYSTEM

PROPOSED PROCESS FLOW

4. Browse, use files and apply authorized direct actions

A. DOCUMENT USE

STEP 1

Sign in and open the Softcopy or Hardcopy catalog.

REGISTERED USER

STEP 2

Apply role permissions and document scope to records and available actions.

PK DTS

STEP 3

For a softcopy, open, download or print its current controlled file when authorized.

REGISTERED USER

B. PERMITTED DIRECT ACTIONS

AUTHORIZED OPERATOR

STEP 4

Choose a permitted direct document maintenance or assignment action.

PK DTS

STEP 5

Validate the direct permission, document scope, active targets and proposed changes.

PK DTS

STEP 6

Apply the authorized changes immediately and save the controlled record.

NOTES

Normal file delivery will require an active document and its current approved file. Catalog metadata visibility alone will not grant file access.

Direct maintenance will require its own permission and management scope. It will take effect without creating an approval request.

Direct assignment will support one document, hardcopies at one Location or softcopies within a category and its subcategories; bulk operations will be capped at 2,000 documents.

An approved or in-transit transfer will block direct hardcopy reassignment. Expired or revoked access grants will provide no access.

LEGEND / REQUEST COVERAGE

Direct Softcopy actions: Create, Revise and Cancel.
Direct Hardcopy actions: Create, Update and Dispose.
Direct assignments: selected active document or permitted location/category group.

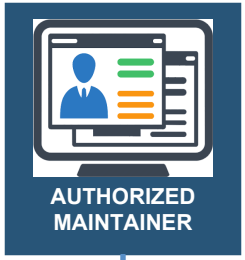

PK DOCUMENT TRACKING SYSTEM

PROPOSED PROCESS FLOW

5. Maintain definitions and prepare controlled recovery

LEGEND / ADMINISTRATION SCOPE

Places: Area > Specific > optional Asset > Location.
Categories: softcopy category and subcategory hierarchy.
Recovery: protected archive, verified contents and pre-restore snapshot.

AUTHORIZED MAINTAINER

OPEN A PERMITTED ADMINISTRATION AREA

Sign in and open the permitted system administration pages. The options below will be independent; permissions will determine access.

ACCOUNT ADMINISTRATOR

ACCOUNTS AND ROLES

Maintain active user accounts, roles and delegated permissions.

AUTHORIZED MAINTAINER

PLACES AND CATEGORIES

Maintain the hardcopy place hierarchy and softcopy categories.

WORKFLOW ADMINISTRATOR

APPROVAL WORKFLOWS

Clone and edit workflow drafts; publish the default approval route per request type.

AUTHORIZED AUDIT / BACKUP USER

AUDIT AND BACKUPS

Inspect audit records; create, download or import a protected backup.

ONLY WHEN RESTORE IS SELECTED

PK DTS

AUTHORIZED RESTORE

Verify recovery archives; create a recovery snapshot before an authorized restore.

NOTES / CONFIGURATION AND RECOVERY RULES

Administration activities will be available independently under their respective permissions. Active role grants will determine the available pages and actions.

Publishing a workflow will affect new submissions. Submitted and Returned requests will retain their captured route and version.

Backup and restore will require an encryption password, signing key, AES-256 ZIP support and database tools. Signed backups will include database, application and private files, excluding sessions, cache and backup recursion.

Restore will recover the database and private working data after a recovery snapshot. Maintenance will block ordinary requests during restore; application-code recovery will be performed offline.
