1. Proposed document-control process

Proposed responsibilities for request approval, direct actions and physical transfers

External participant | Process / activity | Start / end | Arrows: direction of activity

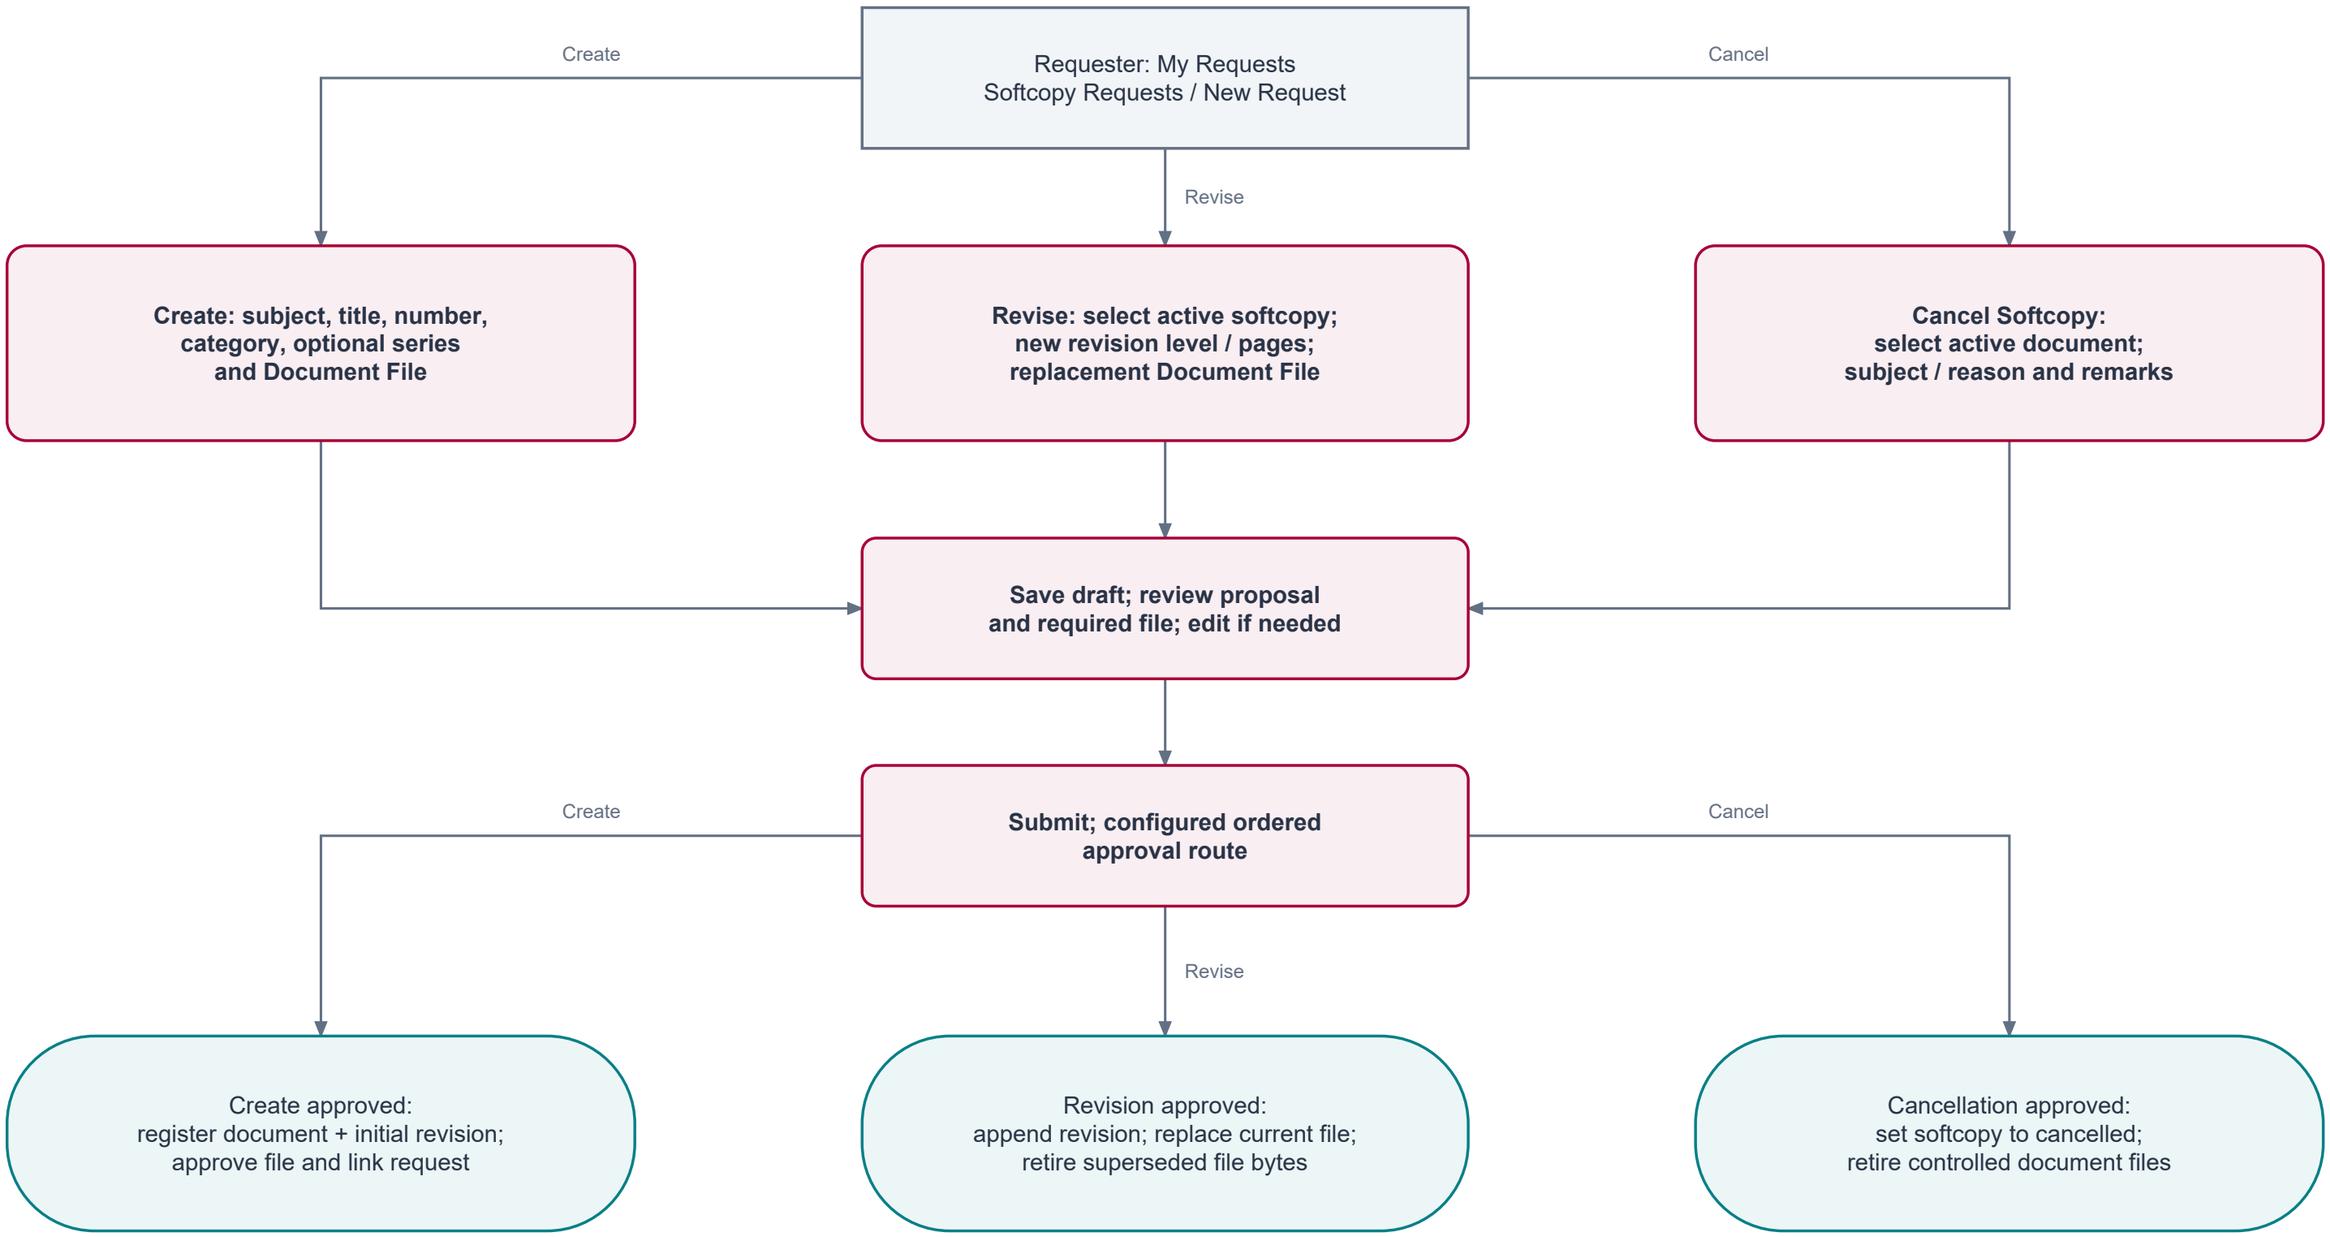

- Approvers will be able to approve, reject or return a request. Flowchart sheet 3 defines when Return will reopen a previous step or return the proposal to its requester.
- Direct Softcopy Create/Revise/Cancel, Hardcopy Create/Update/Dispose and administrative assignments will require separate permissions.
- Each request type will follow its configured approval sequence. Transfers will also require Dispatch by the requester and Accept by the designated recipient.

2. Softcopy creation, revision and cancellation

The requester will submit a proposal; the controlled document will change only after final approval

External participant | Process / activity | Start / end | Arrows: direction of activity

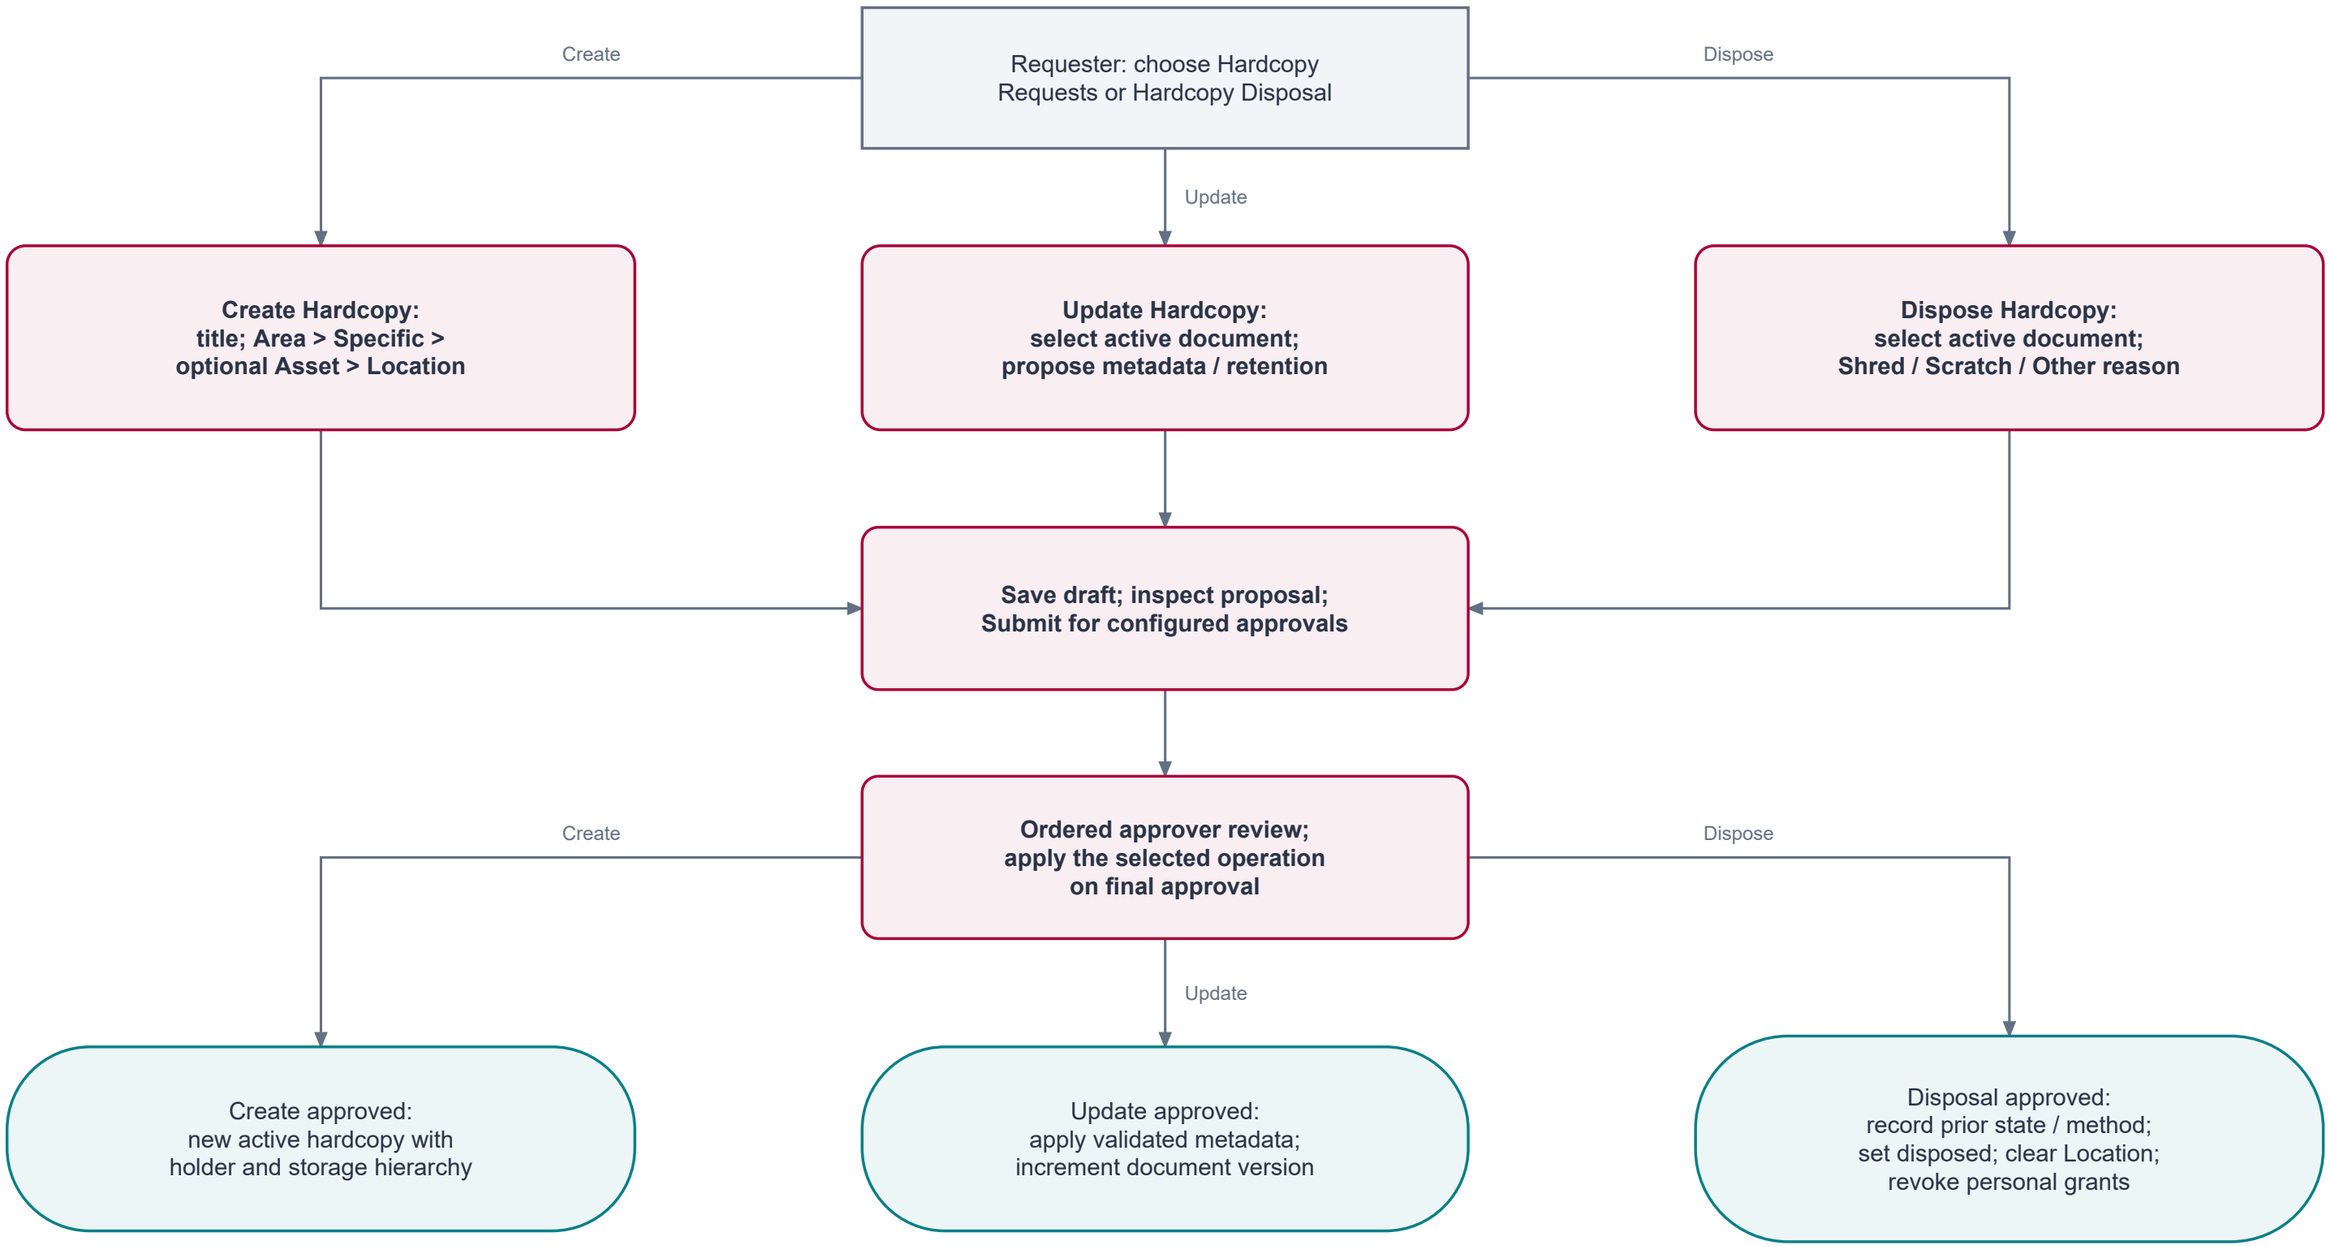

- Create and Revise will require a Document File before submission: PDF, TXT, PNG, JPG/JPEG, DOCX or XLSX, up to 15 MB.
- A revision level shall contain 1-30 characters and differ from the current revision. A blank revision Effective Date will default to the approval date.
- Cancel Softcopy will cancel an active controlled document after approval. Cancel draft will cancel only an unsubmitted proposal.

3. Hardcopy registration, update and disposal

Approved requests will control physical document metadata, custody and retention

External participant | Process / activity | Start / end | Arrows: direction of activity

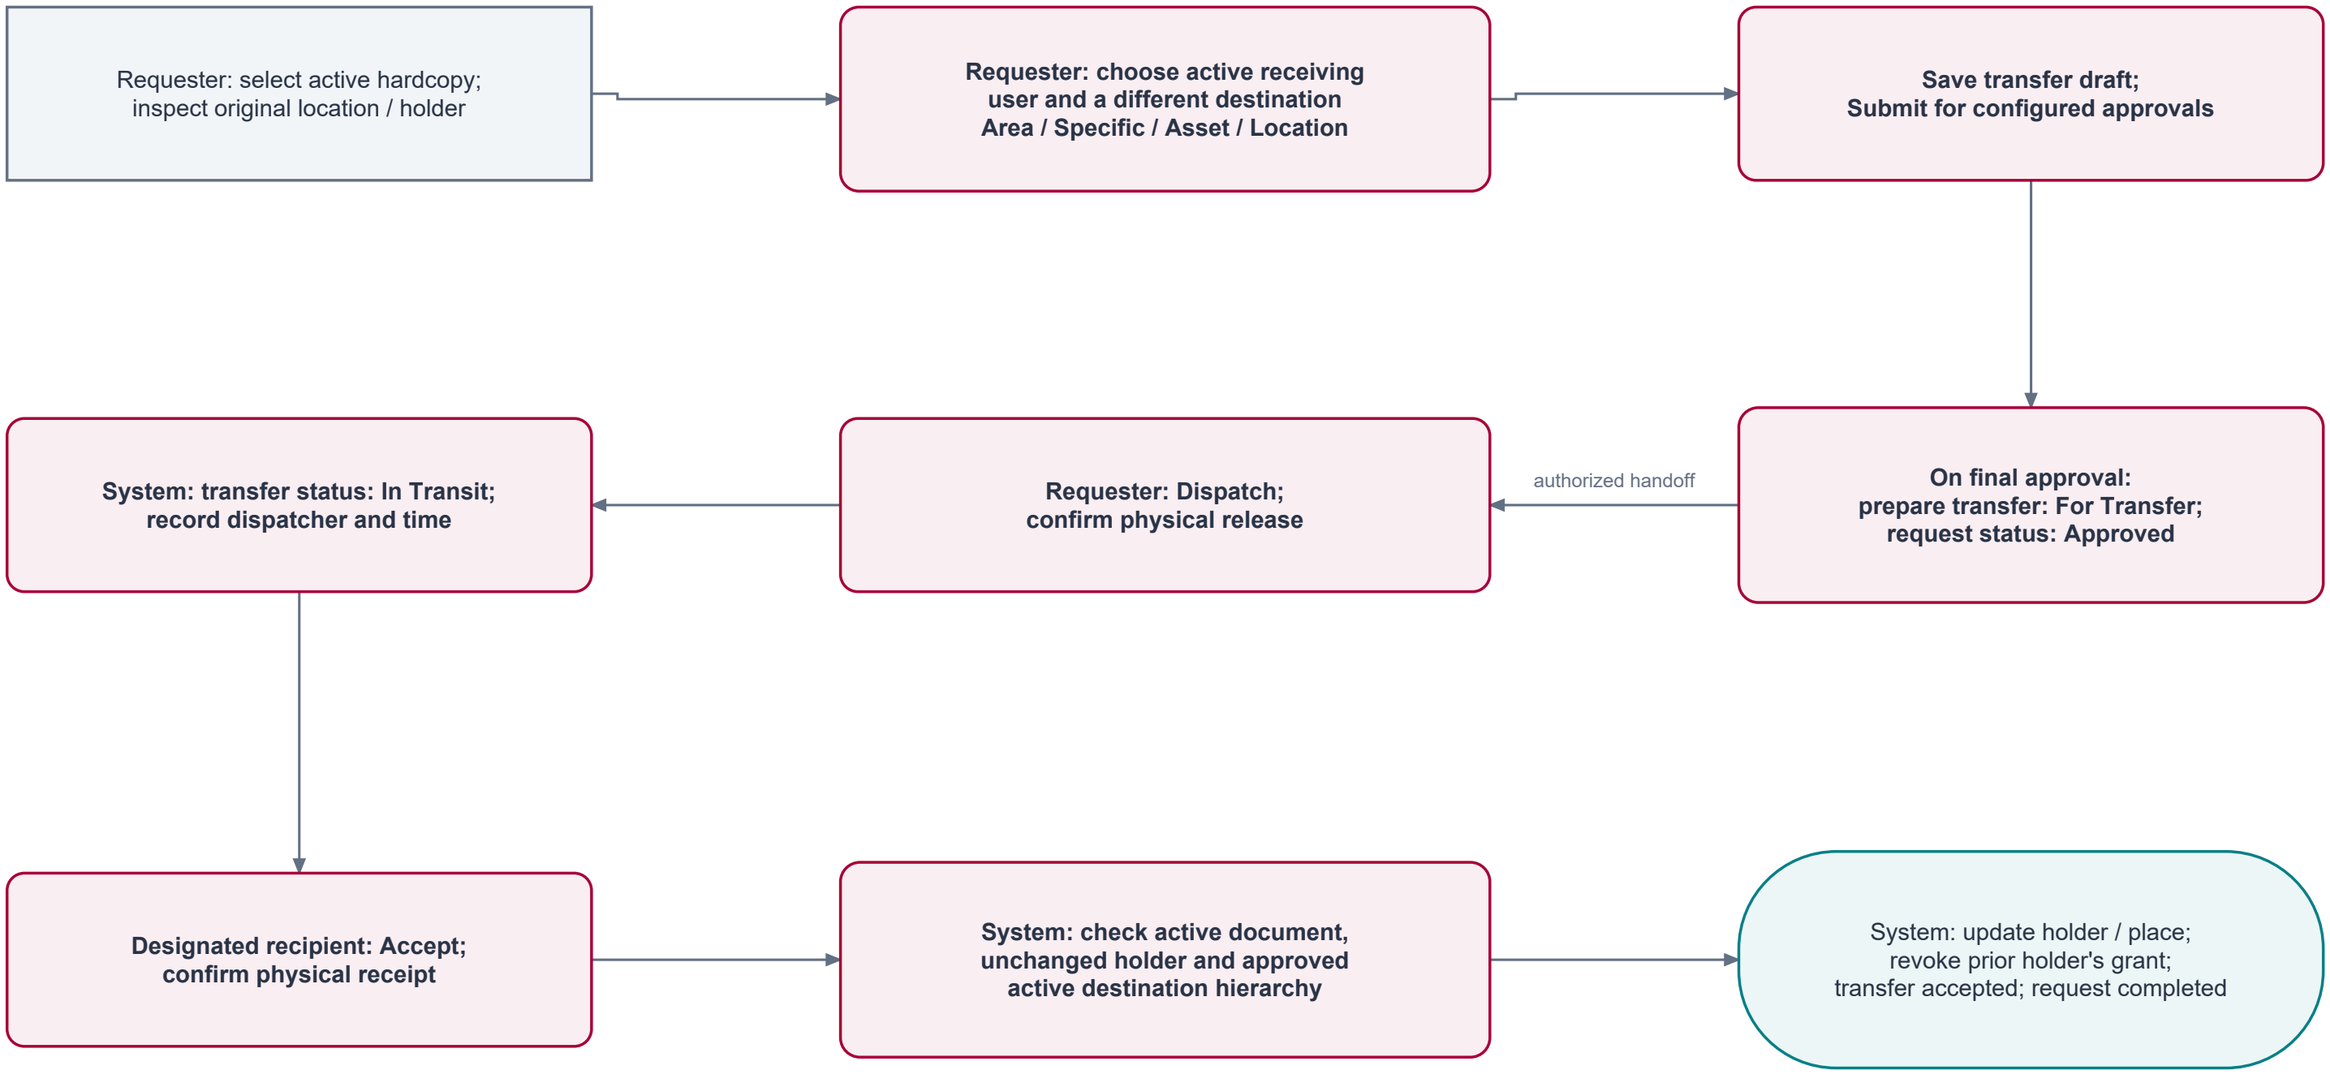

- The requester will become the hardcopy holder unless a global administrator selects an active holder. Update requests will be limited to the current holder or a global administrator.
- Retention dates and the remaining/due/overdue countdown will support monitoring. Disposal will require a separate request or authorized direct action.
- Other disposal shall include explanatory text of up to 250 characters. Approval will record disposal; physical destruction will remain an operational responsibility.

4. Hardcopy transfer and physical receipt

Approval will authorize a handoff; custody and Location will change only after recipient acceptance

External participant | Process / activity | Start / end | Arrows: direction of activity

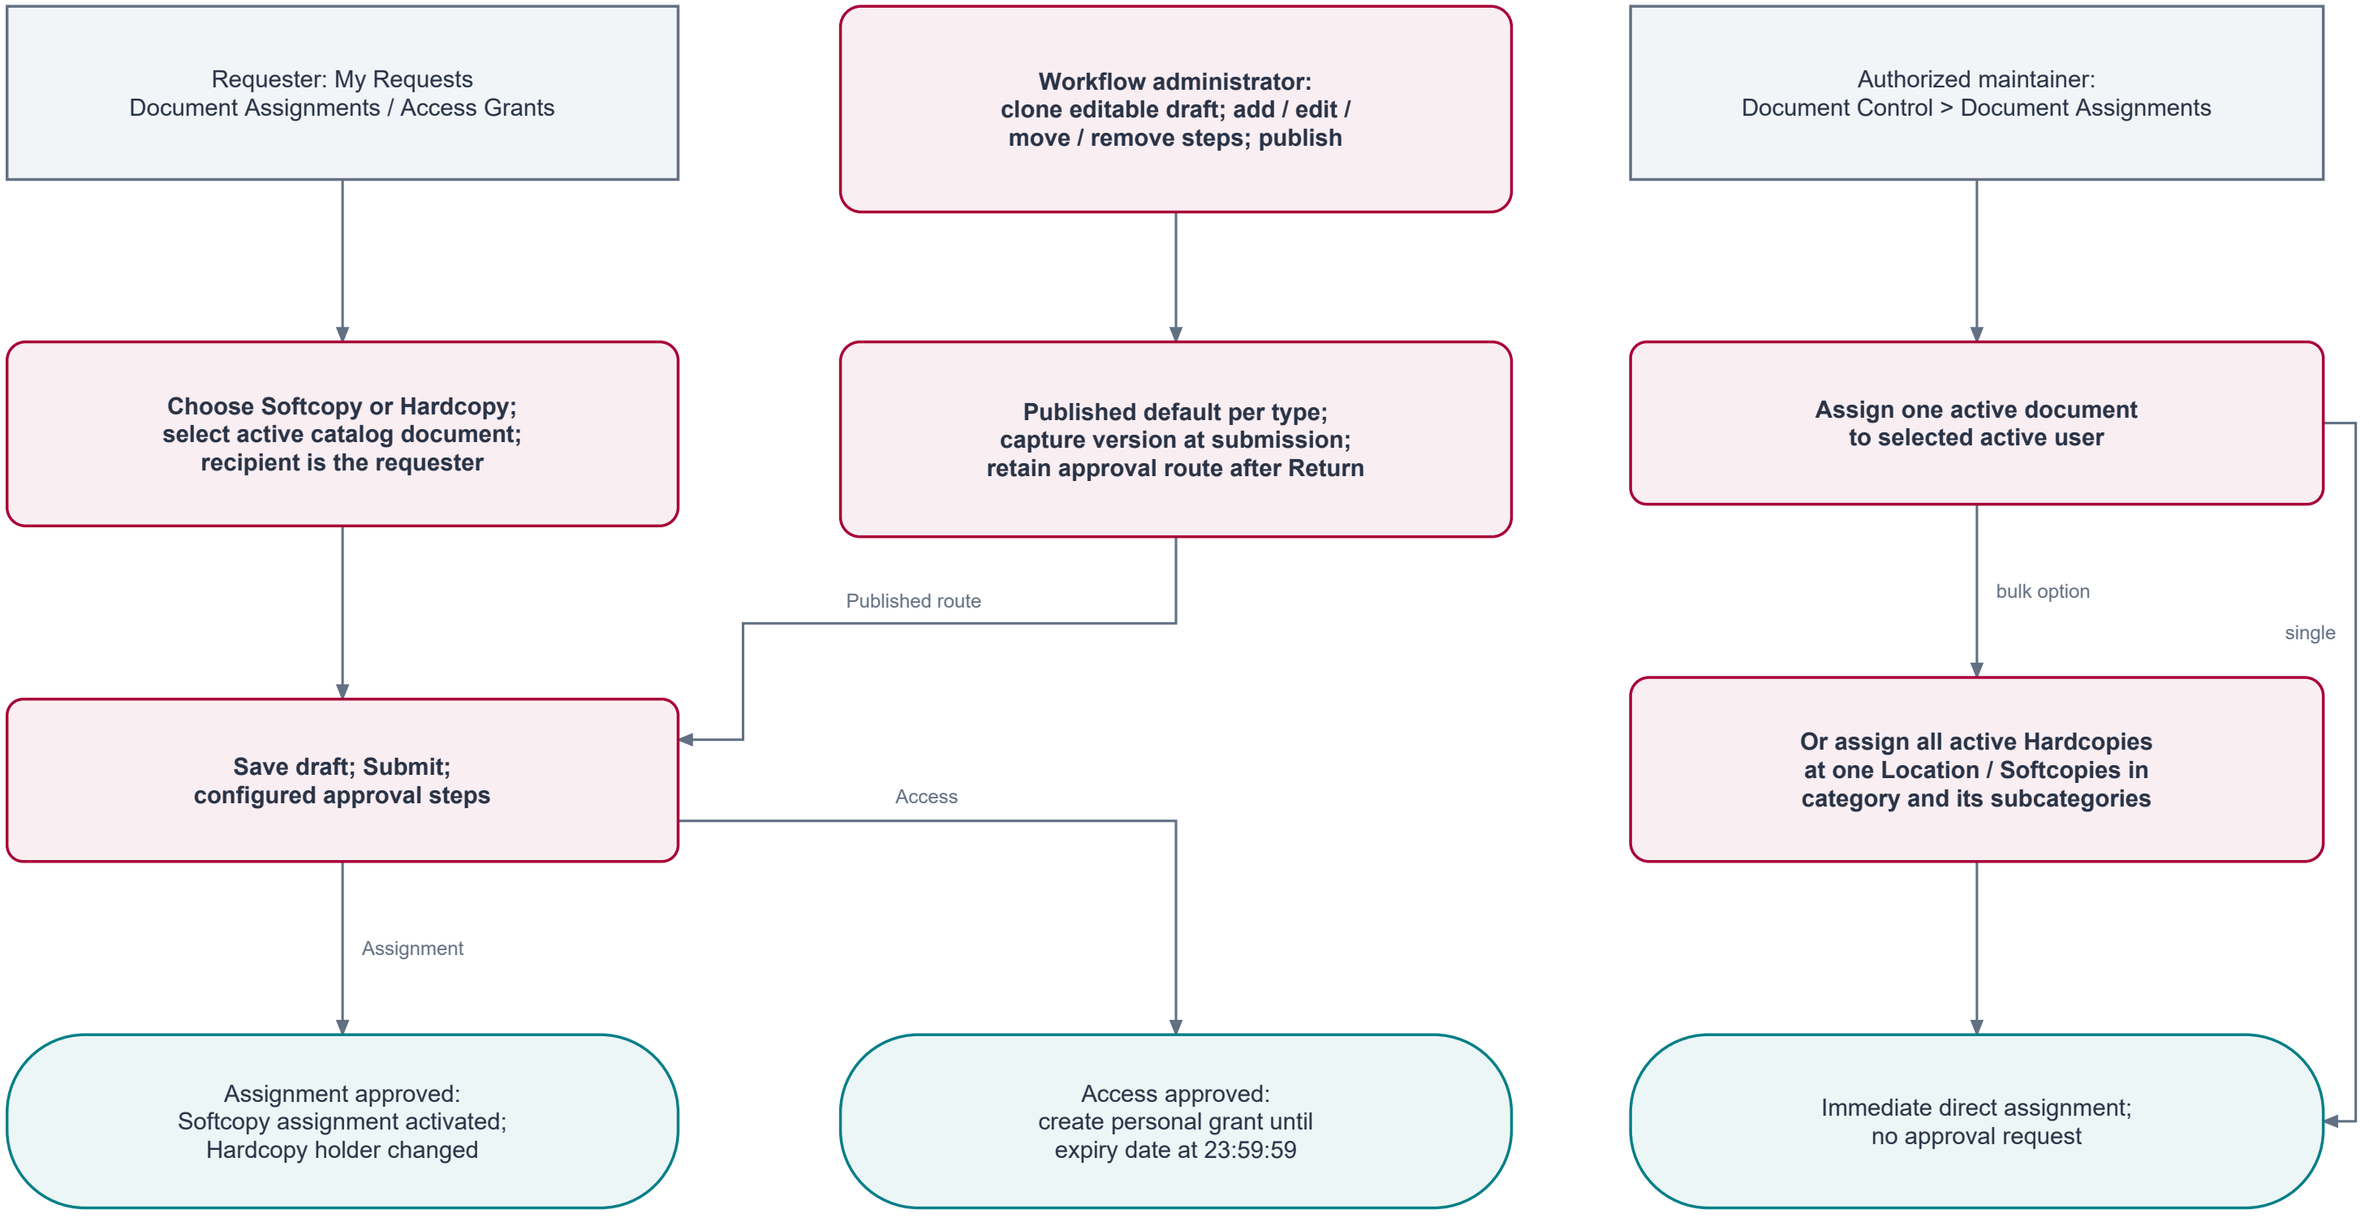

- Only the original transfer requester will be allowed to Dispatch. Only the designated recipient will be allowed to Accept an in-transit transfer.
- My Tasks > Hardcopy Transfer will show the pending Dispatch or Accept action to its assigned participant. The request will complete only after acceptance.
- Acceptance will check the current holder, document status and approved active destination. A failed check will preserve custody and location.

5. Assignment, access and administrative paths

Proposed self-service requests, direct assignments and workflow administration

External participant | Process / activity | Start / end | Arrows: direction of activity

- Assignment and access requests will name the requester as recipient. Document Control > Document Assignments will support direct assignment to another active user.
- An access grant will expire at 23:59:59 on the selected date. Expired or revoked grants will provide no access; catalog visibility alone will not grant file access.
- Bulk assignment will support up to 2,000 documents per operation. An approved or in-transit transfer will block direct reassignment of that hardcopy.
