1. Implemented document-control process

Proposed Process Flow - existing application behavior; functional actors may share the same account

External participant • Process / activity • Start / end → Directed connection

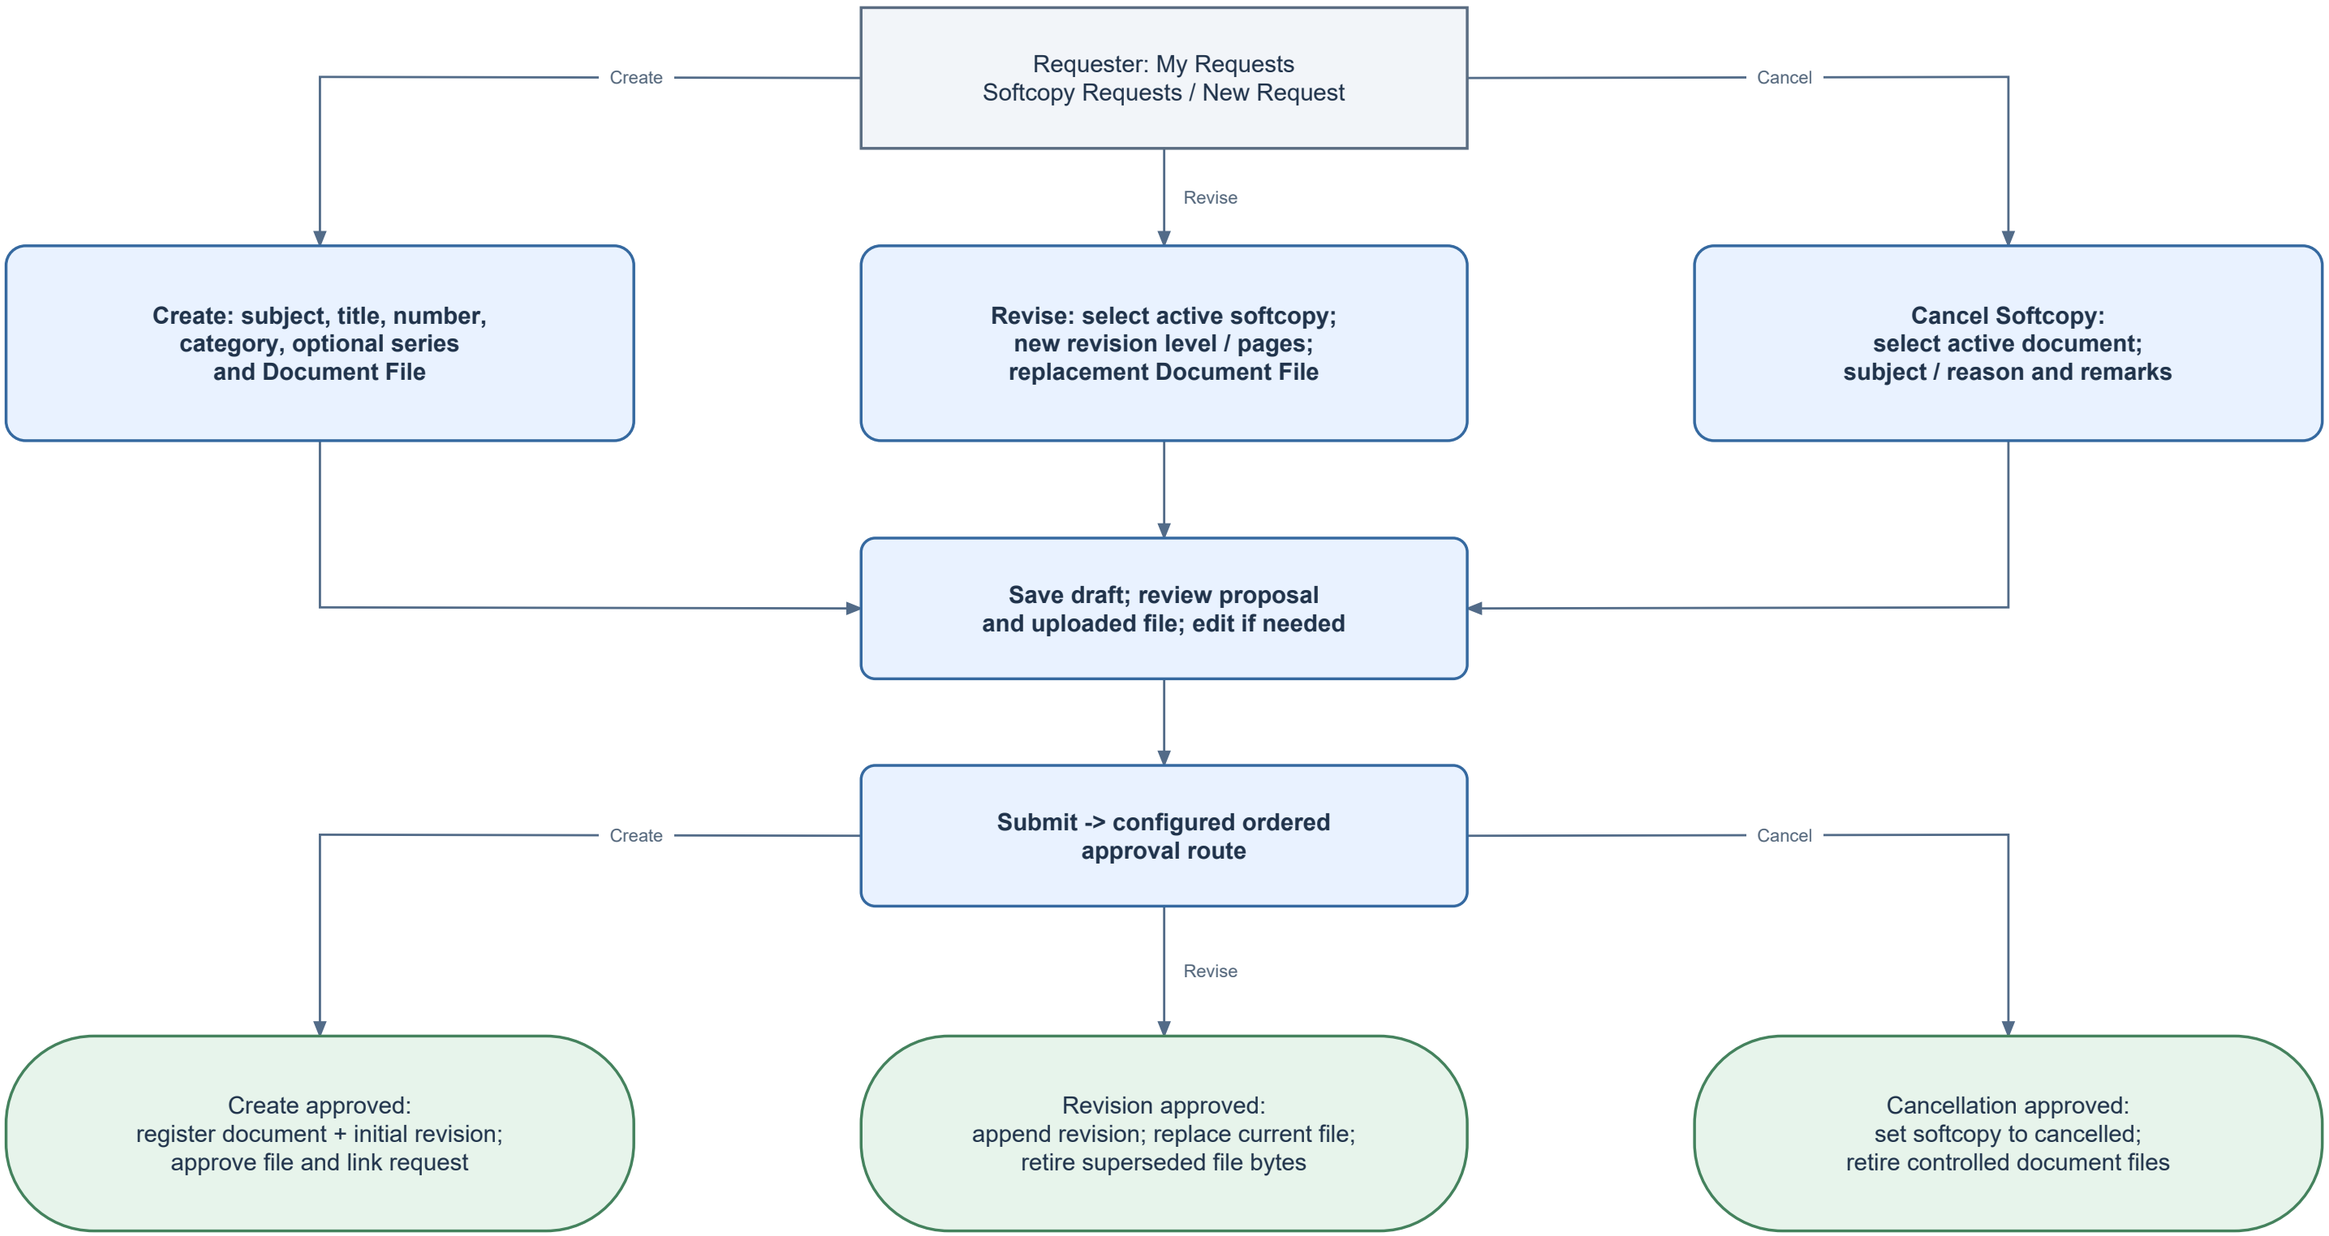

• Review can also reject or return a request. See Flowchart page 3 for the exact reverse-step routing; final approval alone does not complete a physical transfer.
• Direct Softcopy Create/Revise/Cancel, direct Hardcopy Create/Update/Dispose, and administrative assignments use explicit direct permissions. They do not run the request approval route.
• Approver titles and number of steps are configured per request type. Do not assume a fixed leader, Document Control Officer, or Plant Manager sequence.

2. Softcopy creation, revision and cancellation

Requester supplies a proposal; the current controlled document changes only after final approval

External participant • Process / activity • Start / end → Directed connection

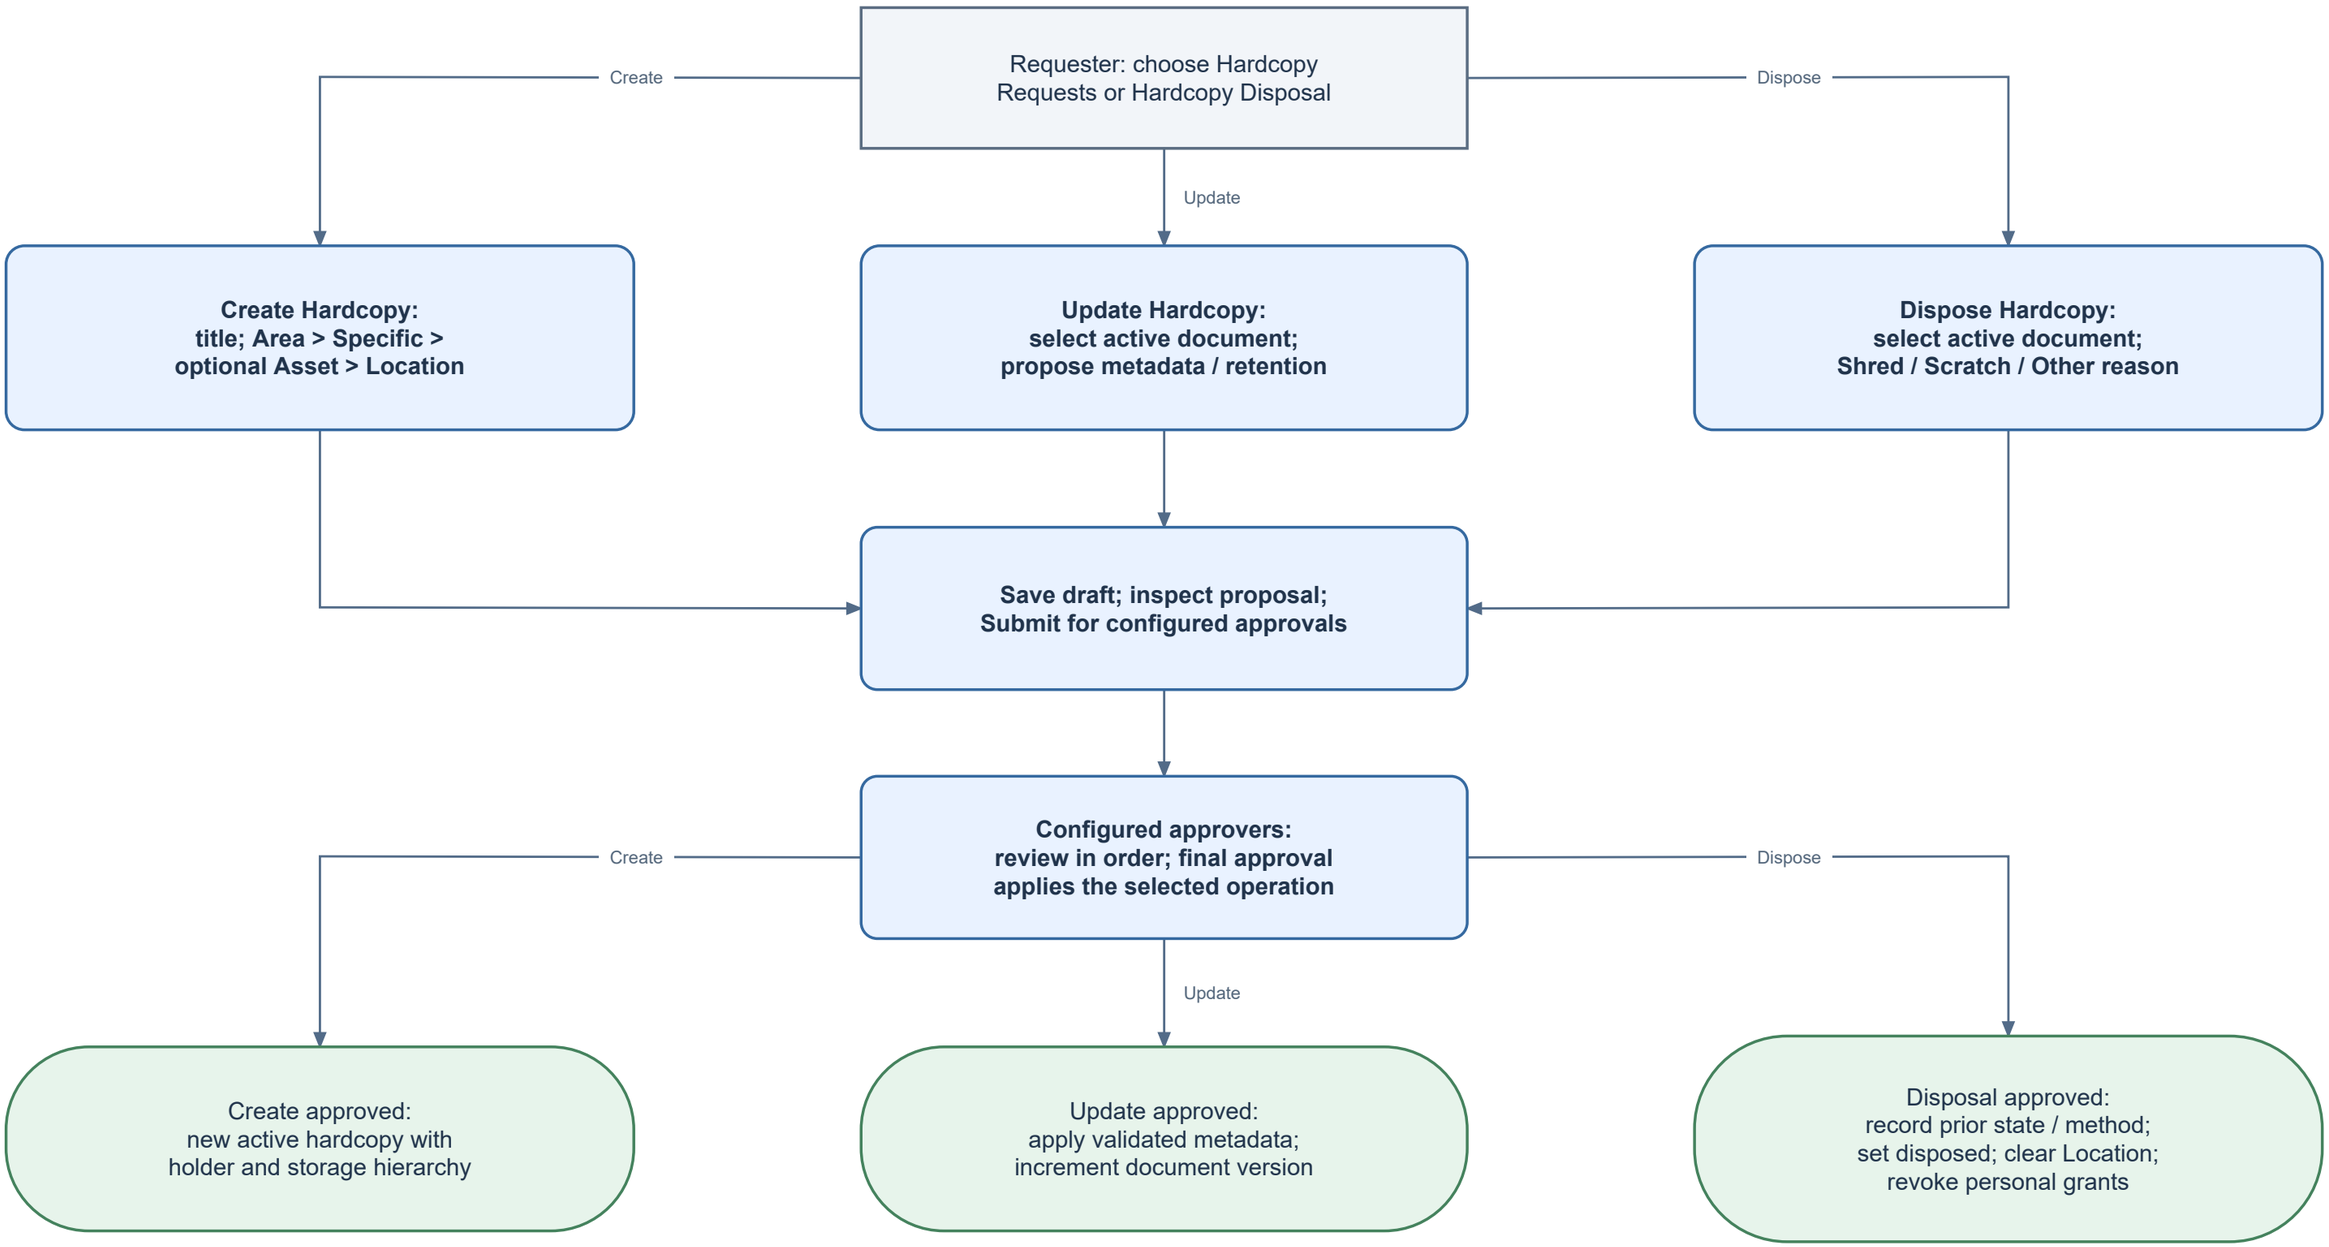

- Create and Revise require a pending file uploaded by the requester before submission. Supported formats: PDF, TXT, PNG, JPG/JPEG, DOCX and XLSX; maximum 15 MB.
- A revision level must be 1-30 characters and differ from the current revision. Blank effective date defaults to approval day. Historical revision rows remain after file retirement.
- Cancel Softcopy is a business request to cancel an active document. Cancel draft only cancels an unsubmitted proposal and does not cancel the stored document.

3. Hardcopy registration, update and disposal

Physical document metadata, custody and retention are controlled through approved requests

External participant • Process / activity • Start / end → Directed connection

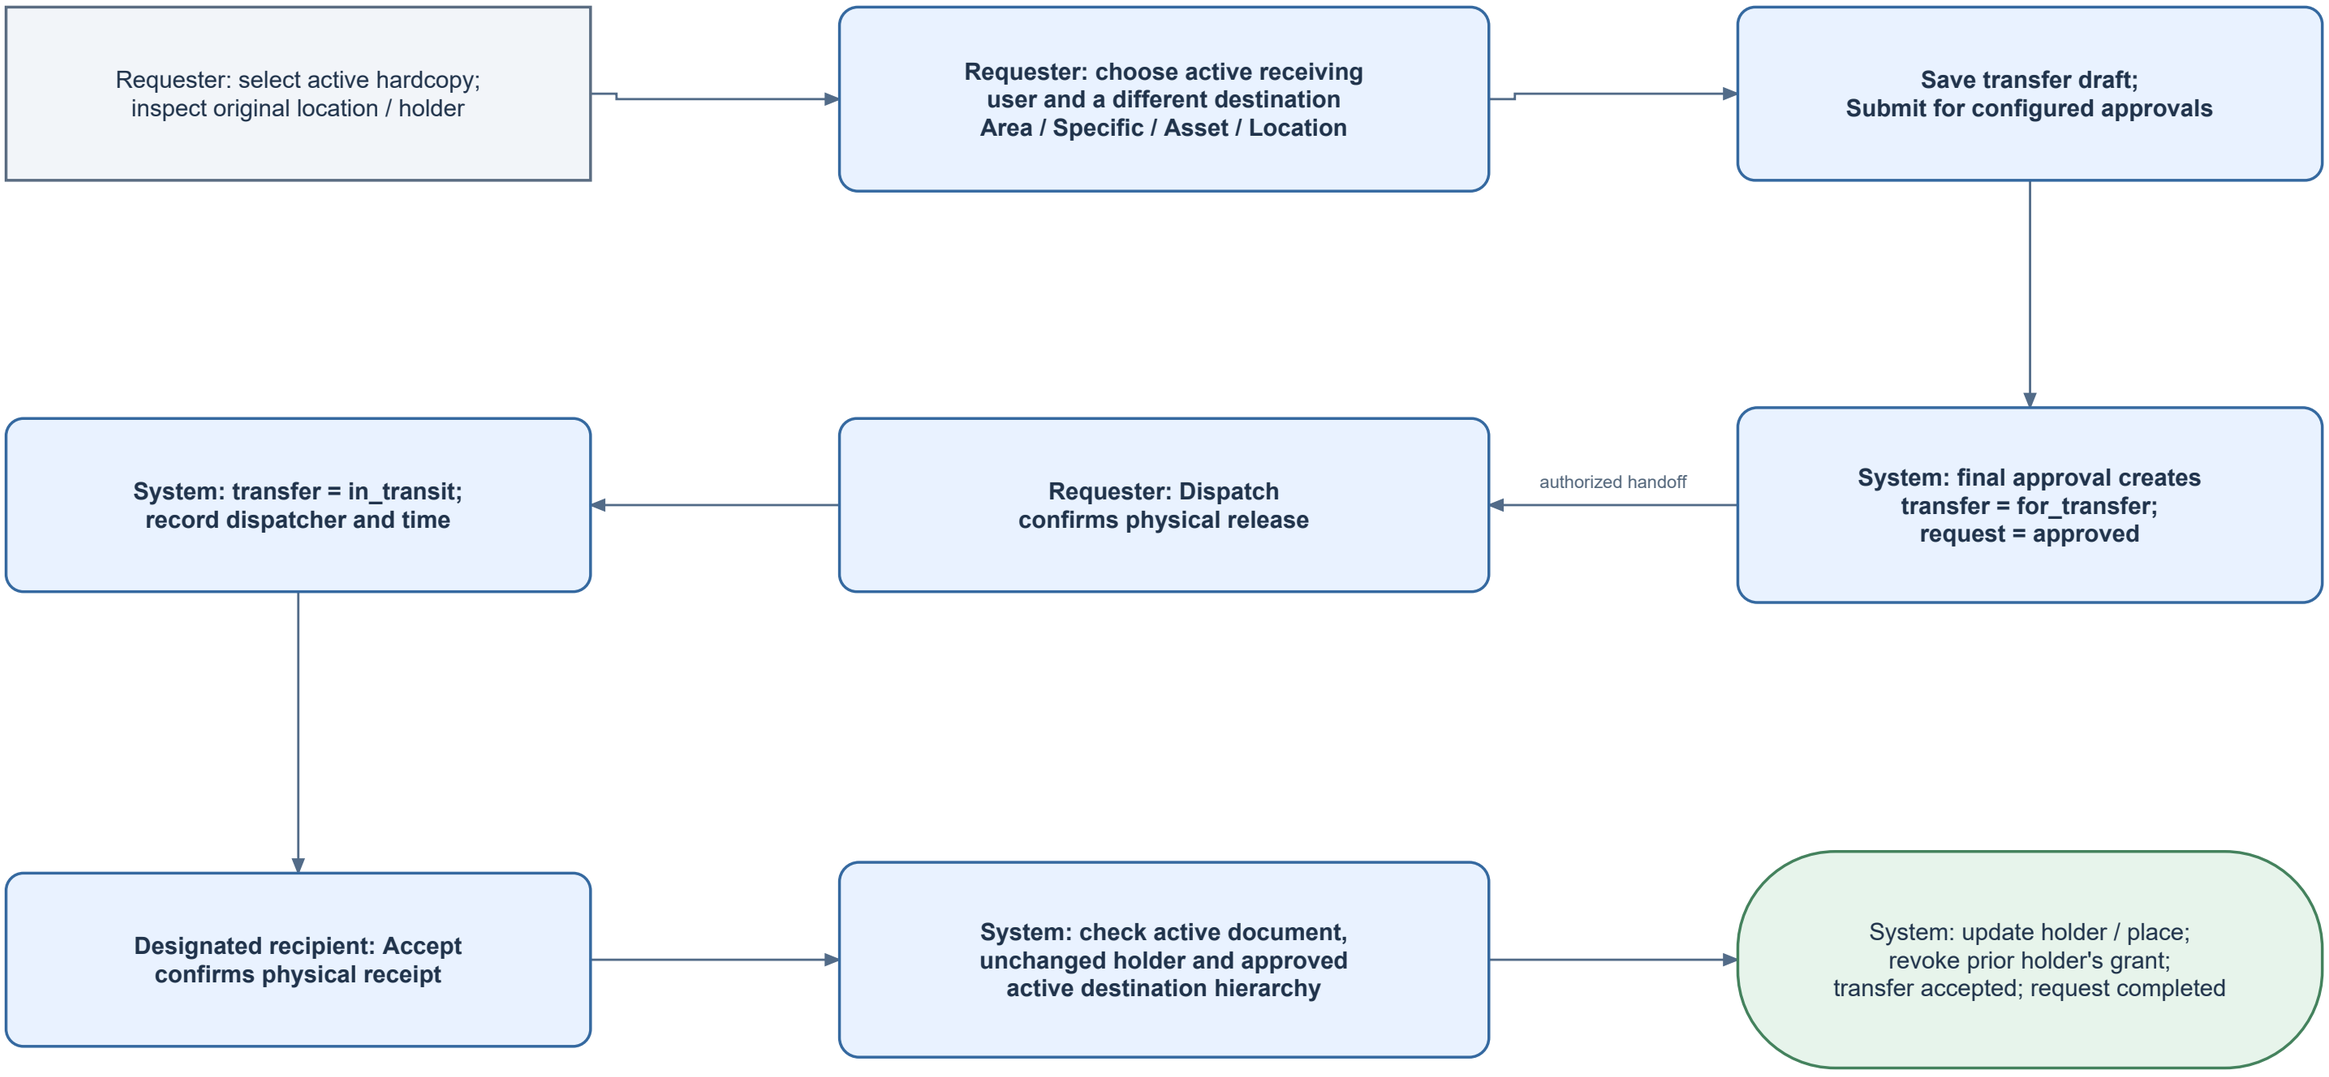

- Non-administrative requests use the requester as holder; only the current holder can request an update. Global administrators may select an active holder.
- Retention tracking stores ordered start/end dates and displays remaining/due/overdue days. Reaching the retention date never schedules or automatically executes disposal.
- Other disposal requires explanatory text of up to 250 characters. Approval records the disposal; the software does not perform the physical destruction.

Source evidence: application/view/pages/hardcopy_document/modal_action/upsert.php:10-100 | application/services/request/request_service.php:220-225,272-280,587-618,675-714 | application/services/documents/document_service.php:67-136 | application/services/documents/disposal_service.php:7-24 | application/services/documents/retention_countdown.php:4-7

4. Hardcopy transfer and physical receipt

Approval authorizes a handoff; custody and Location change only when the designated recipient accepts

External participant • Process / activity • Start / end → Directed connection

• The dispatcher is the original transfer requester, who may differ from the current holder. Only the assigned recipient can accept an in-transit transfer.
• An approved transfer remains incomplete until acceptance. Pending handoffs are shown under My Tasks > Hardcopy Transfer to the exact dispatcher or recipient.
• If the document holder/status or approved destination hierarchy changes, acceptance fails and no custody change is saved. Approval does not move the document automatically.

Source evidence: application/services/request/request_service.php:320-390,643-673,780-789 | application/services/transfer/transfer_service.php:13-142 | application/models/Transfer_model.php:6-34 | application/view/pages/request/shared_index.php:519-574

5. Assignment, access and administrative paths

Self-service approval requests and authorized direct maintenance are separate implemented actions

External participant • Process / activity • Start / end → Directed connection

- Request recipients for assignment and access are forced to the requester on save and submit. An administrator assigns documents to other people through the direct administration screen.
- Access grants are permission-scoped and cease to provide access after expiry or revocation. Catalog/metadata visibility does not grant the file bytes.
- Bulk assignments are atomic and capped at 2,000 documents per operation. Direct hardcopy reassignment is blocked while an approved/in-transit transfer is open.
