Data Flow Diagram

Roles, information and records

Understand who provides information, how it moves through each activity, and where the result is recorded.

Start with the contents page. Choose a topic, follow its explanation, and check the result.

PK DTS and its users

The five supplied roles and the information each sends and receives.

Five supplied roles checked 5 Nov 2026; custom roles allowed. Requester, requester's leader and receiving user are responsibilities, not extra roles.

Main information flows

People send information, PK DTS processes it, and business records hold the result.

People and activities use boxes; stored business records use open-ended boxes. Arrows name the information exchanged.

2. Hardcopy records and storage

Hardcopy creation and editing are direct actions; new creation and update requests are unavailable.

Storage: Area > Specific > optional Asset > Location. Retention dates prompt review and never trigger disposal.

3. Softcopy records and files

Direct changes publish immediately; proposals publish after final approval. Cancellation requests are unavailable.

Creation uses Softcopy Categories and automatic numbering; series is optional. Revision keeps the document identity and advances its revision.

4. External documents and revisions

External Documents use a separate category tree. Creation and revision can be direct or approval based.

Creation and revision require a new attachment. Revision numbers advance automatically. No retention dates; Download uses the current file.

5. Requests and approvals

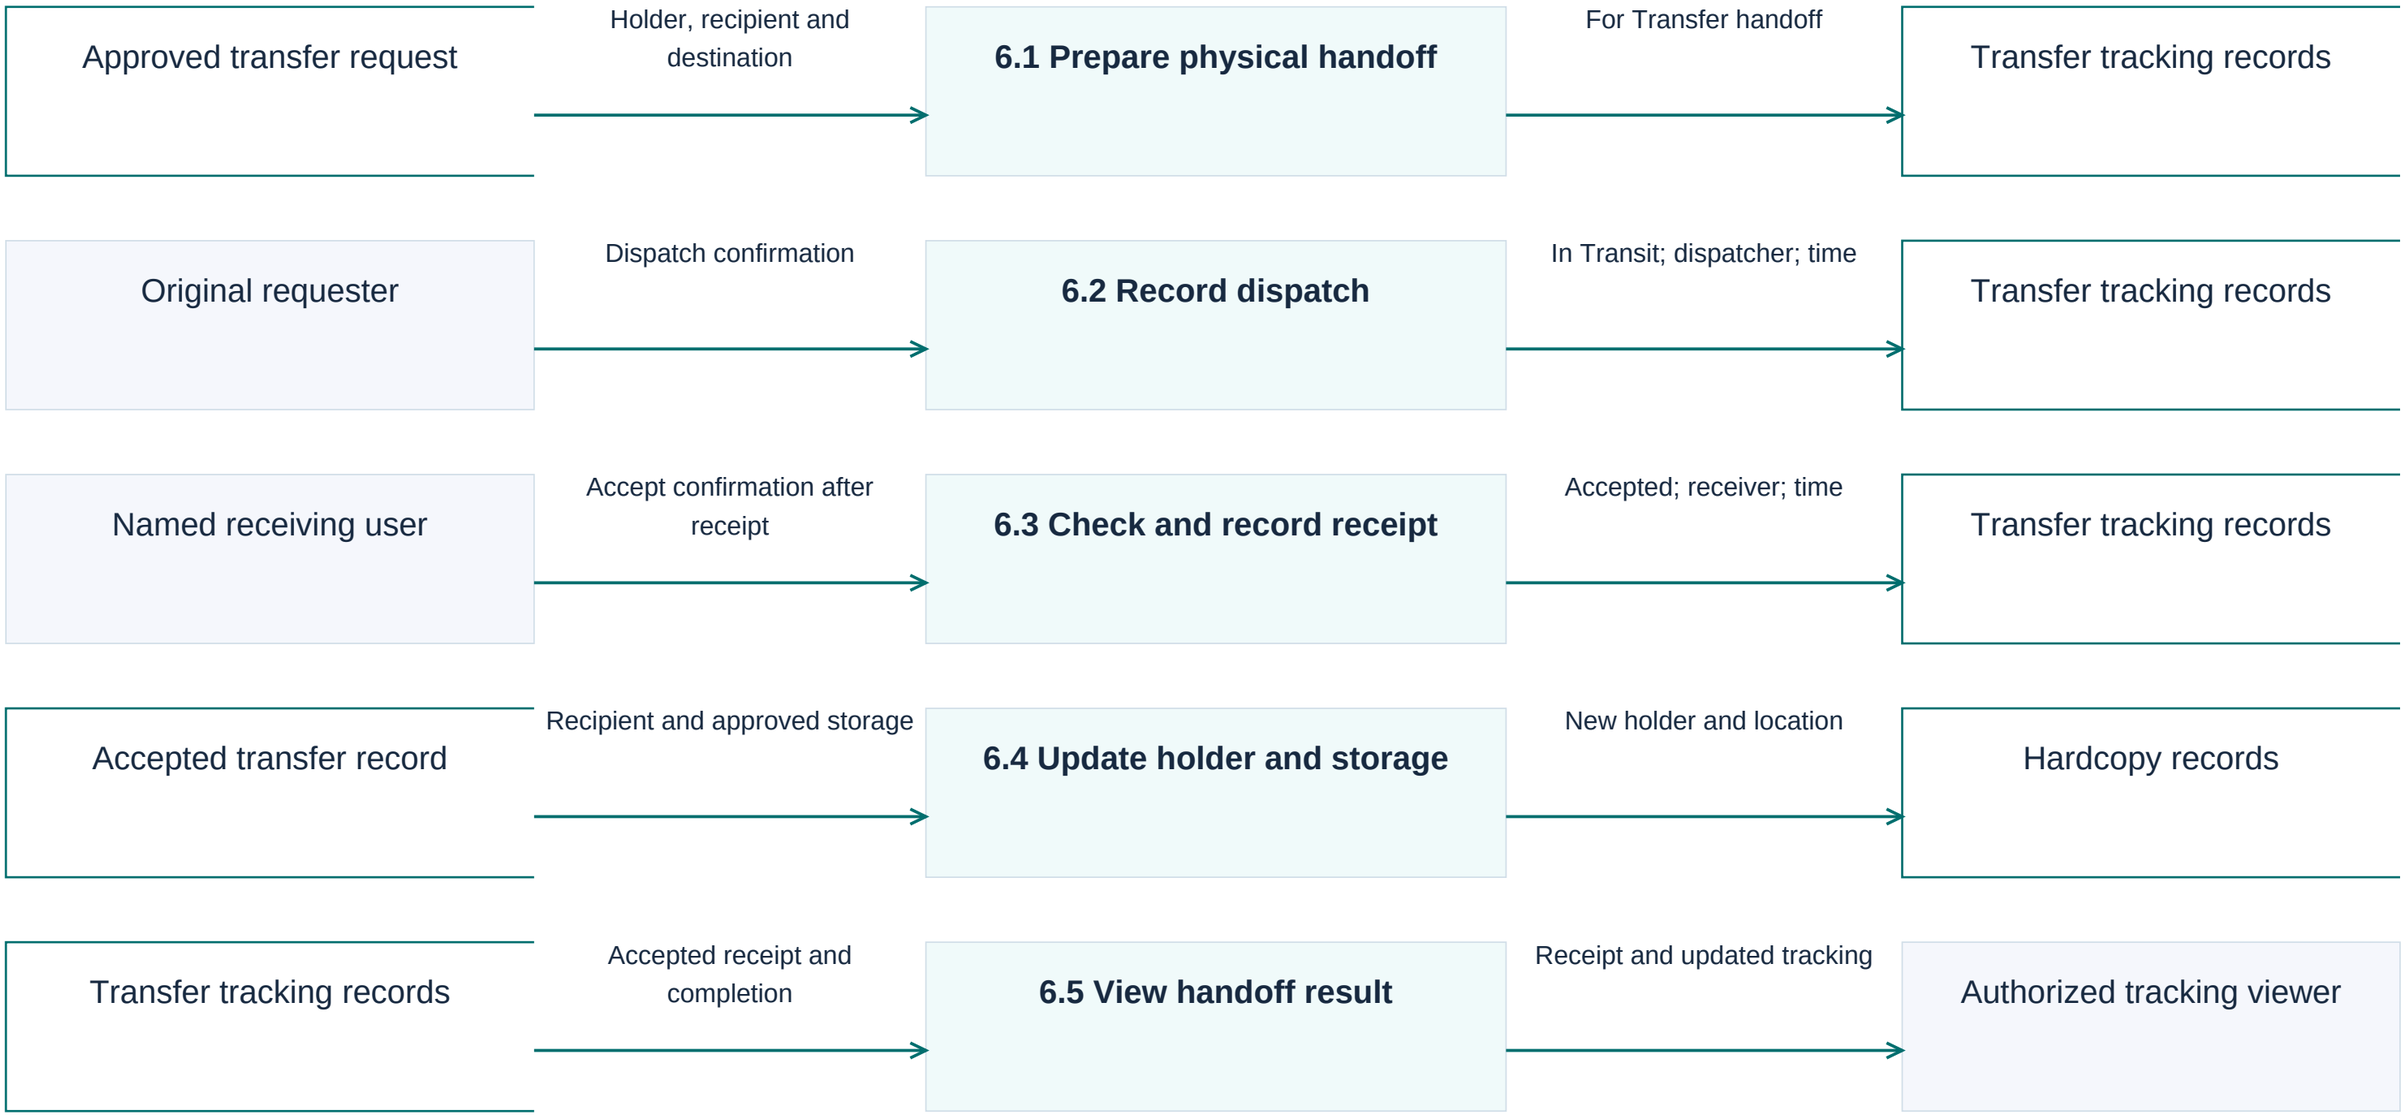

A published route assigns reviews in order and records decisions and proposal changes.

Return at later steps reopens the prior review. Reject ends the request. Resubmission keeps the route. Opening a notice records no decision.

6. Physical transfer and receipt

Acceptance checks the document, holder and approved storage before updating custody. Approval starts handoff tracking.

Only the original requester can Dispatch; only the named receiver can Accept. Custody changes revoke the previous holder's personal hardcopy grants.

7. Access and assignment

Access grants permit use. Assignment changes a softcopy assignee or hardcopy holder. Physical transfers are separate.

Requests are for the requester, using Hardcopy or Softcopy. Hardcopy assignment keeps storage; direct assignment checks active handoffs.

8. Document disposal

Disposal restricts document use and records its reason. Physical disposal follows the organization's procedure separately.

Direct hardcopy disposal keeps its place and grant records. Requested hardcopy disposal clears Location and revokes grants.

9. Accounts and system setup

Maintainers manage accounts, roles, places, categories and routes. Primary and assigned active roles combine permissions.

DCO has no default user, role, workflow or backup administration. Any permitted role can carry leader or receiving-user duties.

10-11. Notices, audit and recovery

Notices link to work; audit records support review. Automatic backups need administrator setup and evidence of a recent run.

Opening a notice does not finish work. Restore replaces live records and files, blocks use during recovery and signs out the operator after success.
