PK DOCUMENT TRACKING SYSTEM

Process Flow

People, actions and outcomes

Explain each procedure from start to finish: who acts, what they do, and what happens next.

IN THIS GUIDE

01 Direct document actions

02 Requests and approvals

03 Physical handoffs

UNDERSTAND THE JOURNEY

Find your task

Choose a topic in the contents.

Follow the page

Read the steps, arrows or screen example.

Check the result

Review the outcome and reminders.

Contents

Choose a topic to jump to its page in the PDF. Page numbers also help you find it in the editable copy.

Sign in and find documents	3
Register or edit a hardcopy	4
Check storage and retention dates	5
Create or revise a softcopy directly	6
Create or revise external documents directly	7
Request a new document or revision	8
Save, submit or remove your draft	9
Review, approve, return or reject	10
Request and approve a hardcopy transfer	11
Dispatch and receive a hardcopy	12
Request temporary document access	13
Request a document assignment	14
Assign one document directly	15
Assign all hardcopies at a Location	16
Assign all softcopies in a category	17
Dispose of a document directly	18
Request hardcopy or external disposal	19
Set up storage places and categories	20
Manage users, roles and permissions	21
Publish an approval route	22
Follow reminders and review past actions	23
Create, download or import a backup	24
Restore records and private files	25

Sign in and find documents

Sign in, find a document and use the actions your account allows.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Staff member**

Sign in with the account your Administrator provided.

02 — **Staff member**

If asked, replace your temporary password before continuing.

03 — **Staff member**

Open Overview, Hardcopy Documents, Softcopy Documents or External Documents.

04 — **Staff member**

Use folders, Search and filters. Open View Details to read the full record.

05 — **PK DTS**

Show the records and actions allowed for this account.

06 — **Staff member**

Use Download or Print when available for the current file. External Documents offer Download.

KEEP IN MIND

Viewing, editing, approving and using files each require permission.

Hardcopy records track physical documents. Softcopy and External Documents can include controlled files.

Register or edit a hardcopy

An authorized holder registers or edits a physical document. Saving updates the record immediately.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Document holder**

Open Hardcopy Documents. Choose Add New Hardcopy Document, or Edit an active record.

02 — **Document holder**

Enter Document Title. Choose Area, Specific, optional Asset and Location.

03 — **Document holder**

Check Current Holder and retention dates. For a new record, add Reason / Notes if needed.

04 — **Document holder**

Choose Save Document and confirm.

05 — **PK DTS**

Check the storage, holder and dates; save the active record and its history.

KEEP IN MIND

Only the current holder with direct hardcopy permission, or an Administrator, can edit an active hardcopy.

Administrators may select another active holder. Other users register themselves as holder.

Register and edit hardcopies directly. New Hardcopy Create and Update requests are unavailable.

Check storage and retention dates

Check where a hardcopy is kept and when its retention period ends, then arrange any follow-up.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Document holder** — Open Hardcopy Documents. Use folders or Search to find the document.

02 — **Document holder** — Open View Details. Check Area, Specific, Asset, Location and Current Holder.

03 — **Document holder** — When editing, enable Track retention period. Enter Retention Start and Retention End.

04 — **PK DTS** — Show days remaining, Due today or an overdue message using office dates.

05 — **Document holder** — Filter by Due Today, Overdue, Due in the Next 7 Days or Due in 8-30 Days.

06 — **Document holder** — Review the physical document. Arrange a permitted update, transfer or disposal if needed.

KEEP IN MIND

Both retention dates are required when tracking is enabled. Retention End must be on or after Retention Start.

Reminders cover visible active hardcopies whose retention end date has arrived. Retention never triggers automatic disposal.

Several hardcopy documents may share one Location. The displayed Location sequence belongs to that storage place.

Create or revise a softcopy directly

An authorized controller creates a softcopy or makes a revision available immediately.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01  **Document controller**

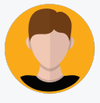

Open Softcopy Documents. Choose Add New Softcopy Document, or Edit an active record.

02  **Document controller**

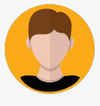

Choose Create Softcopy or Revise Softcopy. Enter Subject / Reason and Proposed Document Title.

03  **Document controller**

To create, choose Category. To revise, choose Existing Softcopy Document.

04  **Document controller**

Check Number of Pages and attach Document File. Add Effective Date and Remarks if needed.

05  **Document controller**

Choose Approve Directly and confirm.

06  **PK DTS**

Create the active document or publish its next revision with the replacement file.

KEEP IN MIND

The system generates a new document number. Need Series Number? allows an existing category number with a unique series.

A file is required: PDF, TXT, PNG, JPG/JPEG, DOCX or XLSX, up to 15 MB. A blank direct Effective Date uses the approval date.

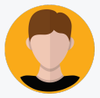

Revision keeps the document number, series and category. Softcopy cancellation is unavailable; authorized disposal is separate.

Create or revise external documents directly

An authorized controller records a document from outside the organization and makes its file available.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01

Document controller

Open External Documents. Choose Add New External Document, or Edit an active record.

02

Document controller

Enter Document Title, choose Category and add Description if needed.

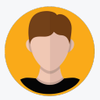

03

Document controller

Choose Attach File. For a revision, attach the replacement file.

04

Document controller

Choose Save Directly and confirm.

05

PK DTS

Create an active record at revision 00, or publish the next revision and its replacement file.

KEEP IN MIND

External Documents use External Categories and do not use retention dates.

Attach PDF, TXT, PNG, JPG/JPEG, DOCX or XLSX, up to 15 MB. Description may contain up to 2,000 characters.

Revising a record or using its file requires the appropriate permission and document access.

Request a new document or revision

Propose a new Softcopy or External Document, or a revision. Final approval updates the document register.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01

Requester

Open My Requests. Choose Softcopy Request or External Document Request, then New Request.

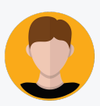

02

Requester

Choose Create or Revise for the document type. Enter Subject / Reason.

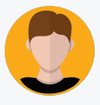

03

Requester

For a revision, choose the existing document. Enter the proposed title and other requested details.

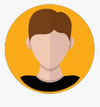

04

Requester

For a new record, choose Category. Attach the required file and add Remarks if needed.

05

Requester

Choose Save Draft and confirm. Review it, then choose Submit and confirm.

06

PK DTS

Follow the approval route. Create the document or publish the revision after final approval.

KEEP IN MIND

Softcopy creation also asks for Number of Pages and supports optional series. Its number and revision are assigned when approved.

External requests use External Create Request or External Revised Request. Enter Description and upload the required Attach File.

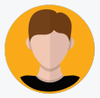

Uploads accept PDF, TXT, PNG, JPG/JPEG, DOCX or XLSX, up to 15 MB. A pending attachment is not the current approved file.

Save, submit or remove your draft

Save and review your proposal, then submit it for approval. You can cancel a draft you have never submitted.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01

Requester

Open the matching My Requests tab. Choose New Request and complete the form.

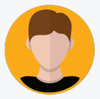

02

Requester

Choose Save Draft and confirm. Use Edit to correct your Draft or Returned request.

03

Requester

Open View Details. Check the proposal and use Review File when available.

04

Requester

When ready, choose Submit and confirm.

05

PK DTS

Check permission, active choices and files. Mark Submitted and notify the first approver.

KEEP IN MIND

Only the requester can edit their Draft or Returned request. Submitted requests keep the route recorded at submission.

An existing Submitted Access, Assignment or Transfer request blocks another of these for the same requester and document.

Only the requester can Cancel a Draft. Delete permanently removes an eligible Cancelled draft only if it was never submitted.

Review, approve, return or reject

Default workflow example: Softcopy Request (Create Softcopy). Each assigned operator can Approve, Return or Reject.

ASSIGNED OPERATORS / APPROVAL ORDER

Requester

Prepare the proposal and Submit.

Requester's leader

Noted By

Plant Manager

Plant Manager Review & Approval

Document Control Officer

Document Control Officer Review & Approval

At each review: read the proposal, Review File and approval history. Choose an action, add optional remarks and Confirm.

APPROVE

Requester's leader approves

Plant Manager reviews next.

Plant Manager approves

Document Control Officer reviews next.

Document Control Officer approves

Apply the approved change. Status: Completed.

RETURN

Requester's leader returns

Requester corrects and resubmits. Status: Returned until resubmission.

Plant Manager returns

Requester's leader reviews again. Status stays Submitted.

Document Control Officer returns

Plant Manager reviews again. Status stays Submitted.

REJECT

Any assigned operator rejects

Status: Rejected. The approval route ends.

Proposed change

Not applied. No new document is created.

Requester checks the result

Read the decision and remarks. This request cannot be resubmitted.

This sample uses the supplied default. Check your Approval Process Timeline. A returned request keeps its original route when resubmitted.

Only the assigned user or role can decide; Administrator status gives no bypass. An approved transfer still needs Dispatch and Accept.

Request and approve a hardcopy transfer

Approve the receiving user and destination before releasing the physical document.

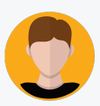

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Requester**

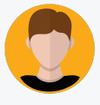

Open My Requests > Hardcopy Transfer Request. Choose New Request.

02 —  **Requester**

Choose Hardcopy Document. Check Original Places and Holder against the current record.

03 —  **Requester**

Choose Destination Area, Specific, optional Asset and a different Location.

04 —  **Requester**

Choose Receiving User. Enter Request Subject and optional Remarks, then Save Draft and Submit.

05 —  **Assigned approvers**

Review and approve the transfer in the order set by its approval route.

06 —  **PK DTS**

Create a For Transfer handoff. Keep the holder and storage unchanged until acceptance.

KEEP IN MIND

Source and destination choices must be active and allowed. The destination needs Area, Specific and Location; Asset is optional.

The requester may differ from the Current Holder. Only the original requester can later choose Dispatch.

Default route: Plant Manager, Document Control Officer, then Requester confirmation. Check the published route for changes.

Dispatch and receive a hardcopy

The original requester dispatches the approved document. The named receiver accepts it after physical receipt.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Original requester**

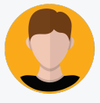

Open My Tasks > Hardcopy Transfer Request. Find Physical Transfer Handoffs.

02 —  **Original requester**

For a For Transfer handoff, release the document. Choose Dispatch and confirm.

03 —  **PK DTS**

Mark In Transit. Record who dispatched the document and when.

04 —  **Receiving user**

After receiving the document, open Physical Transfer Handoffs. Choose Accept and confirm.

05 —  **PK DTS**

Check that the document and Location are active, the holder is unchanged and storage matches approval.

06 —  **PK DTS**

Make the receiver the holder, update storage, mark Accepted and complete the request.

KEEP IN MIND

Only the original requester can Dispatch. Only the named receiving user can Accept an In Transit handoff.

A changed holder, unavailable Location or changed approved storage path blocks acceptance and leaves the handoff unchanged.

When the holder changes, acceptance revokes the previous holder's personal hardcopy access grants. Global permissions still apply.

Request temporary document access

Ask to use a softcopy or hardcopy until a chosen date. This leaves the holder and assignments unchanged.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Requester**

Open My Requests > Document Access Request. Choose New Request.

02 — **Requester**

Choose Softcopy or Hardcopy and its document. Check your name in Recipient / Assigned User.

03 — **Requester**

Enter Subject / Reason. Set Access Expires At after today and add Remarks if needed.

04 — **Requester**

Choose Save Draft, then Submit. Confirm each action.

05 — **Assigned approvers**

Review the request and complete each approval step.

06 — **PK DTS**

Grant access through the approved expiry date. Keep the holder and assignments unchanged.

KEEP IN MIND

This request is for you. Recipient / Assigned User cannot be changed to another person.

Expiry must still be valid at final approval. Access ends at the end of the selected date, or earlier if revoked.

The account's document and file permissions still apply. Catalog visibility alone does not grant download, print or edit rights.

Request a document assignment

Ask to be added as a softcopy assignee or named as the holder of an active hardcopy.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01  **Requester**

Open My Requests > Document Assignment Request. Choose New Request.

02  **Requester**

Choose Softcopy or Hardcopy and its document. Check your name in Recipient / Assigned User.

03  **Requester**

Enter Subject / Reason and optional Remarks. Choose Save Draft, then Submit and confirm.

04  **Assigned approvers**

Review the assignment and complete each approval step.

05  **PK DTS**

For Softcopy, add the requester as an assignee and keep the existing assignees.

06  **PK DTS**

For Hardcopy, make the requester Current Holder and keep the storage unchanged.

KEEP IN MIND

This request is for the requester. An authorized document controller uses Document Assignments to assign another person.

Hardcopy assignment changes the recorded holder after final approval. It does not move the document or use Dispatch and Accept.

Assignment does not create a temporary access grant. The account's document and file permissions still apply.

Assign one document directly

An authorized controller adds a softcopy assignee or changes a hardcopy holder immediately.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01  **Document controller**

Open Document Assignments. Choose Hardcopy / Places or Softcopy / Categories.

02  **Document controller**

Choose Assign Document. Select the active document and Assigned User.

03  **Document controller**

Choose Save Assignment and confirm.

04  **PK DTS**

Check the active document and user, and any active hardcopy transfer.

05  **PK DTS**

Change the hardcopy holder or add the softcopy assignee. Keep storage unchanged.

KEEP IN MIND

Direct assignment requires its own permission and takes effect immediately. It needs no approval, Dispatch or Accept.

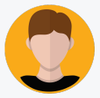

Hardcopy assignment changes the recorded holder and keeps the storage place. It does not physically move the document.

Softcopy assignment keeps existing assignees. An active Hardcopy transfer blocks reassignment. File permissions still apply.

Assign all hardcopies at a Location

An authorized controller gives every active hardcopy at one Location the same recorded holder.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Document controller**

Open Document Assignments. Choose Hardcopy / Places.

02 —  **Document controller**

Choose Location and Assigned User. Review the active records at that Location.

03 —  **Document controller**

Choose Assign All and confirm.

04 —  **PK DTS**

Check the user, active records, 2,000-document limit and any active transfers.

05 —  **PK DTS**

Change the holder for every selected document. Keep each storage location unchanged.

KEEP IN MIND

Bulk assignment includes all active hardcopies at the selected Location, up to 2,000 documents.

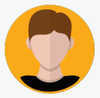

For Transfer or In Transit handoffs block hardcopy reassignment. Resolve the active transfer before retrying.

Direct assignment needs its own permission and no approval, Dispatch or Accept. It changes records without physically moving documents.

Assign all softcopies in a category

An authorized controller adds a user to every active softcopy in the chosen category and its subcategories.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Document controller**

Open Document Assignments. Choose Softcopy / Categories.

02 —  **Document controller**

Choose Category / Subcategory and Assigned User. Review the category and its subcategories.

03 —  **Document controller**

Choose Assign All and confirm.

04 —  **PK DTS**

Check the active user, selected records and 2,000-document limit.

05 —  **PK DTS**

Add the user to every selected document. Keep the existing assignees.

KEEP IN MIND

The selected category and all its subcategories are included. Only active softcopies are assigned, up to 2,000 documents.

Direct assignment requires its own permission and takes effect immediately, without an approval request.

Assignment does not create a temporary personal access grant. The account's document and file permissions still apply.

Dispose of a document directly

An authorized holder or controller records the method and marks the document Disposed immediately.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01

Document holder or controller

Open the document register. Choose Dispose on an active record you are allowed to manage.

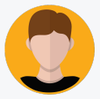

02

Document holder or controller

Choose Shred, Scratch or Other. Describe the method if you choose Other.

03

Document holder or controller

Confirm the direct disposal.

04

PK DTS

Check both required direct permissions, the reason and whether the document can be disposed of.

05

PK DTS

Mark Disposed. Save the method, responsible person and disposal history.

KEEP IN MIND

Direct disposal supports all three registers and needs both direct permissions. Other requires a description of up to 250 characters.

Direct Hardcopy disposal retains Location and personal grants. Softcopy disposal retires its controlled files.

External disposal keeps stored files and revision records but blocks normal download. Retention never triggers automatic disposal.

Request hardcopy or external disposal

Ask for approval to dispose of a document. Its record changes after final approval.

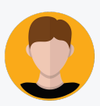

FOLLOW THE STEPS FROM TOP TO BOTTOM

01  **Requester**

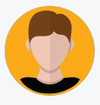

Open My Requests > Disposal Request. Choose New Request.

02  **Requester**

Choose Hardcopy or External and its active document. Complete the request details.

03  **Requester**

Choose Shred, Scratch or Other. Describe Other and add Remarks if needed.

04  **Requester**

Choose Save Draft and review it, then Submit. Confirm each action.

05  **Assigned approvers**

Review the proposed disposal and complete each approval step.

06  **PK DTS**

After final approval, mark Disposed. Keep the approval and disposal history.

KEEP IN MIND

Disposal requests support Hardcopy and External Documents only. Softcopy disposal is available as a permitted direct action.

Other requires a description of up to 250 characters. A Return or Reject leaves the proposed disposal unapplied.

Approved Hardcopy disposal clears Location and personal grants. External disposal keeps stored files and revision records.

Set up storage places and categories

Maintain the storage places and category folders people choose when recording documents.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01  **Places maintainer**

Open Setup Places. Choose Area, Specific, Asset Number, Location, Softcopy Category or External Category.

02  **Places maintainer**

Create Area, then a Specific within it. Add optional Asset Numbers under Specific.

03  **Places maintainer**

For Location, enter Location Name, Area and Specific. Add Asset Number and Archive Date if needed.

04  **Places maintainer**

For a category, enter its name and folder name. Add a parent and softcopy code pattern if needed.

05  **Places maintainer**

Save and confirm. Use Edit or Deactivate when allowed.

06  **PK DTS**

Check parent choices, category nesting and unique codes or sequences. Update the available choices.

KEEP IN MIND

A Location can omit Asset Number. Its Sequence is unique within its Specific and is assigned automatically when left empty.

Softcopy Categories and External Categories are separate. Only softcopy categories define a document numbering pattern.

Deactivation removes a choice from active selection; it does not delete the existing document records.

Manage users, roles and permissions

Create accounts, assign roles and choose which pages and actions each person can use.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Account administrator**

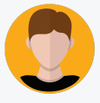

Open Roles & Permissions. Choose Add Role or Edit, select allowed actions, then Save Role.

02 —  **Account administrator**

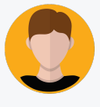

Open User Management. Choose Add User or Edit and enter the account details.

03 —  **Account administrator**

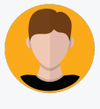

Choose Primary role, Assigned roles and optional Leader. Check Active account, then Save User.

04 —  **Account administrator**

Give sign-in details securely to the intended person. Reset a temporary password when needed.

05 —  **Staff member**

Sign in with the temporary password, then replace it as prompted.

06 —  **Account administrator**

Review Assigned Documents. Deactivate users or unused roles, or Remove an eligible role.

KEEP IN MIND

Active roles combine a user's permissions. The Leader receives approval steps configured as Requester's leader.

A delegated administrator cannot grant permissions they do not hold or create an Administrator role assignment.

Roles still used by accounts or approval routes cannot be removed. Account and role actions each require their own permission.

Publish an approval route

Choose who approves future requests and in what order. Previously submitted requests keep their recorded route.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01

Workflow administrator

Open Workflow Builder. Select the request type and version.

02

Workflow administrator

Choose Start First Draft or Create Next Draft.

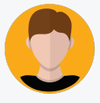

03

Workflow administrator

Choose Add Approval Step. Name it and select a role, person, requester's leader or requester.

04

Workflow administrator

Choose Save Step. Edit, reorder or Remove steps to match the process.

05

Workflow administrator

Choose Validate & Publish and confirm.

06

PK DTS

Publish the checked route for future submissions. Keep the route already saved for existing requests.

KEEP IN MIND

Published versions are read-only. Create a draft to change future approvals.

Submission must resolve active approvers. A route that needs a requester's leader cannot start without an active assigned leader.

Check the published route for the actual approval order. Default route examples may change.

Follow reminders and review past actions

Use notices to find work needing attention. Authorized reviewers can trace recorded actions in the audit trail.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 —  **Staff member**

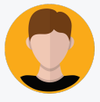

Check the counts beside My Requests and My Tasks. Open the matching tab.

02 —  **PK DTS**

Highlight your Draft or Returned requests, assigned approvals and physical handoff tasks.

03 —  **Staff member**

Open a task reminder. Read the request before taking an allowed action.

04 —  **Document holder**

Open a retention reminder. Check the hardcopy's due or overdue date.

05 —  **Auditor**

Open Internal Audit Trail. Search or filter to find the action.

06 —  **Auditor**

Open View Details. Check who acted, when it happened and the result.

KEEP IN MIND

Approval Process Timeline and request history explain request decisions. Internal Audit Trail records wider system actions.

Reminders do not approve, dispatch, accept or dispose of documents; the responsible person still confirms the action.

Counts and alerts reflect the signed-in account's allowed work. Dates and times use Asia/Manila.

Create, download or import a backup

Keep protected recovery copies and remove eligible older backup and log archives when needed.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Backup operator**

Open Backup & Restore. Check that backup setup is ready.

02 — **Backup operator**

Choose Backup now and confirm to create a protected backup.

03 — **PK DTS**

List the completed backup with its type, creation time and size.

04 — **Backup operator**

Choose Download. Store the backup in a secure place.

05 — **Backup operator**

To add an existing backup, choose Import backup. Select Backup ZIP and confirm.

06 — **Backup operator**

Choose Clean up when appropriate. Confirm removal of eligible archives older than three months.

KEEP IN MIND

A backup contains system records, application code and private files. Routine temporary files and existing backup archives are excluded.

The daily backup target is 5:00 PM, Asia/Manila. Automatic runs require the server scheduler to be configured and verified.

Import verifies and stores a backup; it does not restore live data. Clean up applies to eligible backup, audit and log archives.

Restore records and private files

Replace current records and private files with a checked backup, then sign in and verify the result.

FOLLOW THE STEPS FROM TOP TO BOTTOM

01 — **Backup operator** — Open Backup & Restore. Choose Restore system data.

02 — **Backup operator** — Choose Backup to restore. Enter Your password and type RESTORE.

03 — **Backup operator** — Choose Restore selected backup. Confirm replacement of current records and private files.

04 — **PK DTS** — Check the backup and permission. Save a recovery backup before replacing current data.

05 — **PK DTS** — Pause normal use, restore records and private files, then sign out the operator.

06 — **Backup operator** — Sign in again. Check the restored records, attachments and everyday tasks.

KEEP IN MIND

Plan a maintenance period: restoration replaces current records and private files with the selected backup's contents.

Enter the operator's account password. The server must also be configured to open and verify the protected archive.

The web restore does not replace application code. A system maintainer handles code recovery separately when needed.
